Selected Papers By Chia-shun Yih (In 2 Volumes) W M Lai,Sung P Lin,1991-05-30 The volume represents a lifetime s work of the author for many years the Stephen P Timoshenko Distinguished University Professor of Fluid Mechanics of the University of Michigan The papers selected treat the dynamics of stratified or rotating fluids internal or surface waves hydrodynamic stability jets and plumes flow in porous media and certain aspects of hydrodynamics in magnetic or electric fields When the papers are viewed in perspective heterogeneity whether in density entropy circulation viscosity or in some quantity which can be called magnetic circulation seems to be a recurring theme in the phenomena investigated It provides a general framework through which the understanding of the various phenomena is facilitated by the satisfying similarity underlying their seeming diversity **Scale-Space Theory in Computer Vision** Tony Lindeberg,1993-12-31 The problem of scale pervades both the natural sciences and the vi sual arts The earliest scientific discussions concentrate on visual per

ception much like today and occur in Euclid s c 300 B C Optics and Lucretius c 100 55 B C On the Nature of the Universe A very clear account in the spirit of modern scale space theory is presented by Boscovitz in 1758 with wide ranging applications to mathemat ics physics and geography Early applications occur in the cartographic problem of generalization the central idea being that a map in order to be useful has to be a generalized coarse grained representation of the actual terrain Miller and Voskuil 1964 Broadening the scope asks for progressive summarizing Very much the same problem occurs in the realistic artistic rendering of scenes Artistic generalization has been analyzed in surprising detail by John Ruskin in his Modern Painters who even describes some of the more intricate generic scale space sin gularities in detail Where the ancients considered only the merging of blobs under blurring Ruskin discusses the case where a blob splits off another one when the resolution is decreased a case that has given rise to confusion even in the modern literature Rock Mechanics and Engineering Volume 4 Xia-Ting Feng, 2017-05-18 Excavation Support and Monitoring is the fourth volume of the five volume set Rock Mechanics and Engineering and contains twenty three chapters from key experts in the following fields Excavation Methods Support Technology Monitoring Technology Integrated Engineering Monitoring and Analysis The five volume set Comprehensive Rock Engineering which was published in 1993 has had an important influence on the development of rock mechanics and rock engineering Significant and extensive advances and achievements in these fields over the last 20 years now justify the publishing of a comparable new compilation Rock Mechanics and Engineering represents a highly prestigious multi volume work edited by Professor Xia Ting Feng with the editorial advice of Professor John A Hudson This new compilation offers an extremely wide ranging and comprehensive overview of the state of the art in rock mechanics and rock engineering and is composed of peer reviewed dedicated contributions by all the key experts worldwide Key features of this set are that it provides a systematic global summary of new developments in rock mechanics and rock engineering practices as well as looking ahead to future developments in the fields Contributors are world renowned experts in the fields of rock mechanics and rock engineering though younger talented researchers have also been included The individual volumes cover an extremely wide array of topics grouped under five overarching themes Principles Vol 1 Laboratory and Field Testing Vol 2 Analysis Modelling and Design Vol 3 Excavation Support and Monitoring Vol 4 and Surface and Underground Projects Vol 5 This multi volume work sets a new standard for rock mechanics and engineering compendia and will be the go to resource for all engineering professionals and academics involved in rock mechanics and engineering for years to come
