Quaternary History of the Coorong Coastal Plain, Southern Australia Colin V. Murray-Wallace, 2018-04-28 This book provides an up to date overview of the Quaternary geological and geomorphological evolution of the Coorong Coastal Plain region and its significance in a global context for understanding long term records of Quaternary sea level changes The Coorong Coastal Plain in southern Australia is a natural laboratory for examining the response of coastal barrier landscapes to relative sea level changes The region provides direct evidence of coastal sedimentation during successive interglacials over the past 1 million years as well as more recent volcanism The region has received international focus and attracted scientists from around the World with interests in long term coastal evolution sea level changes Quaternary dating methods and geochronology soil development temperate carbonate sedimentation karst geomorphology and geologically recent volcanism

Advances in Geomorphology and Quaternary Studies in Argentina Pablo Bouza, Jorge Rabassa, Andrés Bilmes, 2022-02-06 This book presents selected research highlights from the Seventh Argentine Geomorphology and Quaternary Studies Congress hosted at Puerto Madryn Northern Patagonia Argentina by the Argentine Association of Geomorphology and Quaternary Studies AACYG The congress included special sessions symposia invited lectures and posters on the following topics Quaternary stratigraphy and geochronology paleontology diatoms mollusks foraminifera palynology phytoliths paleobotany vertebrates dendrochronology climate change paleoclimate Pampean Quaternary paleolimnology paleomagnetism environmental magnetism hydrogeochemical processes geoarchaeology geomorphology structural geology and neotectonics paleosurfaces volcanism geological hazards assets geomorphosites and digital mapping The Scientific Committee of the Congress has selected the papers published in this volume from more than 150 contributions in many different disciplines

Geosciences, Environment and Man H. Chamley, 2003-08-28 *Geosciences Environment and Man* has three major objectives which determine the division in three parts of this volume I To consider the main natural geological processes interfering with and therefore threatening the activities of man earthquakes volcanic eruptions land movements floods wind and coastal risks main prevention and mitigation measures against these natural hazards are presented II To examine the exploitation of earth's natural resources such as materials ores and minerals fossil fuels water radioactivity and the resulting consequences on solid Earth balance and future III To assess the hold level reached by the activities of man on planet surface envelopes through agriculture urbanization industrialization and communication the local to global effects of human influence triggered by recent demographic growth on underground soils water and air characters are taken into account Both deteriorating and beneficial aspects of Earth the interactions of man are emphasized as well as mitigation or restoration measures and perspectives

Climate Changes during the Holocene and their Impact on Hydrological Systems Arie S. Issar, 2004-08-05 This volume provides a comprehensive review of the effects of climate variability on hydrological and human systems in the

Holocene last 10 000 years with a view to predicting similar effects in the future It will be of value to researchers and professionals in hydrology climatology geology and historical geography *Plio-Quaternary Volcanism in Italy* Angelo Peccerillo, 2005-12-12 Central Southern Italy and the Tyrrhenian Sea are the sites of extensive Plio Quaternary magmatic activity The rock compositions include crustal anatectic granites and rhyolites tholeiitic calc alkaline shoshonitic volcanics and potassic to ultrapotassic and Na alkaline volcanics This very wide compositional variation makes Italian magmatism one of the most complex petrological issues the understanding of which is a challenge for modern petrology and geochemistry This book summarises the petrological geochemical and volcanological characteristics of Italian Plio Quaternary volcanism and discusses petrogenetic hypotheses and possible geodynamics settings The book is written for petrologists and geochemists but fundamental geochemical information is well presented and the use of excessive jargon is avoided making the book readable to a wide audience of Earth scientists *Age Determination of Young Rocks and Artifacts* Günther A. Wagner, 1998-04-16 Dating the Quaternary which covers approximately the last 2 million years has experienced considerable progress over the past few decades On the one hand this resulted from the necessity to obtain a valid age concept for this period which had seen tremendous environmental changes and the advent of the genus Homo On the other hand instrumental improvements such as the introduction of highly sensitive analytical techniques gave rise to physical and chemical innovations in the field of dating This rapid methodological development is still in full progress The broad spectrum of chronometric methods applicable to young rocks and artifacts also becomes increasingly intricate to the specialist Hence it is my goal to present a comprehensive state of the art summary of these methods This book is essentially designed as an aid for scientists who feel a demand for dating tasks falling into this period i e Quaternary geologists and archaeologists in the broadest sense Since it has been developed from a course of lectures for students of geological and archaeological sciences held at the University of Heidelberg it certainly shall serve as an introduction for students of these disciplines *The SAGE Handbook of Environmental Change* John A Matthews, 2012-01-31 The SAGE Handbook of Environmental Change is an extensive survey of the interdisciplinary science of environmental change including recent debates on climate change and the full range of other natural and anthropogenic changes affecting the Earth ocean atmosphere system in the past present and future It examines the historic importance present status and future prospects of the field over two volumes With more than 40 chapters the books situate the defining characteristics and key paradigms within a state of the art review of the field including its changing nature and diversity of approaches evidence base key theoretical arguments resonances with other disciplines and relationships between theory research and practice Opening with a detailed contextualizing essay by the editors the work is arranged into six parts Part One Approaches to Understanding Environmental Change Part Two Evidence of Environmental Change and the Geo ecological Response Part Three Causes Mechanisms and Dynamics of Environmental Change Part Four Key Issues of Human induced Environmental Changes and Their Impacts Part Five Patterns Processes and

Impacts of Environmental Change at the Regional Scale Part Six Responses of People to Environmental Change and Implications for Society Global in its coverage scientific and theoretical in its approach the books bring together an international set of respected editors and contributors to provide an exciting timely addition to the literature on climate change With the subjects interdisciplinary framework this book will appeal to academics researchers postgraduates and practitioners in a variety of disciplines including geography geology ecology environmental science archaeology anthropology politics and sociology *Quaternary Geology and the Environment* Jean Riser,2002 This text describes the Quaternary through the different natural environments which always characterized the Earth but which fluctuated during the Quaternary due to climatic variations There are chapters on prehistory and stratigraphy with Quaternary volcanism and inlandis

Encyclopedia of Coastal Science M. Schwartz,2006-11-08 Honorable Mention Award for Excellence in Scholarly and Professional Publishing Maurice Schwartz Editor of the much acclaimed Encyclopedia of Beaches and Coastal Environments Hutchinson Ross 1982 has now brought forth a new volume with a fresh interdisciplinary approach that includes geomorphology ecology engineering technology oceanography and human activities as they relate to coasts Within its covers the Encyclopedia of Coastal Science includes many aspects of the coastal sciences that are only to be found scattered among scientific literature Being broadly interdisciplinary in its treatment of coasts the Encyclopedia of Coastal Science features contributions by 245 well known international specialists in their respective fields and is abundantly illustrated with line drawings and photographs Not only does this volume offer an extensive number of entries it also includes various appendices an illustrated glossary of coastal geomorphology and extensive bibliographic listings This Encyclopedia thus provides a comprehensive reference work for students professionals as well as informed lay readers **Global Climates since the**

Nature through Time Edoardo Martinetto, Emanuel Tschopp, Robert A. Gastaldo, 2020-07-27 This book simulates a historical walk through nature teaching readers about the biodiversity on Earth in various eras with a focus on past terrestrial environments Geared towards a student audience using simple terms and avoiding long complex explanations the book discusses the plants and animals that lived on land the evolution of natural systems and how these biological systems changed over time in geological and paleontological contexts With easy to understand and scientifically accurate and up to date information readers will be guided through major biological events from the Earth's past The topics in the book represent a broad paleoenvironmental spectrum of interests and educational modules allowing for virtual visits to rich geological times Eras and events that are discussed include but are not limited to the much varied Quaternary environments the evolution of plants and animals during the Cenozoic the rise of angiosperms vertebrate evolution and ecosystems in the Mesozoic the Permian mass extinction the late Paleozoic glaciation and the origin of the first trees and land plants in the Devonian Ordovician With state of the art expert scientific instruction on these topics and up to date and scientifically accurate illustrations this book can serve as an international course for students teachers and other interested individuals

U.S. Geological Survey Professional Paper, 1949 *The Las Vegas Formation* Kathleen B. Springer, 2018 The Las Vegas Formation was established in 1965 to designate the distinctive light colored fine grained fossil bearing sedimentary deposits exposed in and around the Las Vegas Valley Nevada In a coeval designation the sediments were subdivided into informal units with stratigraphic and chronologic frameworks that have persisted in the literature Use of the Las Vegas Formation name over the past half century has been hampered because of the lack of a robust definition and characterization of the entire lithostratigraphic sequence and its geographic distribution and chronology This study evaluates and describes deposits attributed to the Las Vegas Formation with detailed stratigraphy sedimentology and field relations Provided by publisher
