Quaternary Ecology:

Quaternary Ecology Hazel R. Delcourt, P. Delcourt, 1991-07-31 The increasing interest during recent years in vegetation history long term climatic changes and the development of biotic communities has resulted in a growth of the literature in this field and has provided an incentive for scientists to use palaeo ecology concepts to clarify contemporary ecological issues Quaternary ecology offers the perspective of time in using natural experiments of the past to evaluate the responses of population communities and ecosystems to climatic and environmental changes on a time scale extending back over the past two million years of the quaternary period Examples from the palaeo ecological literature demonstrate how quaternary ecology interfaces with other branches of ecology including plant demography ecological genetics limnology and landscape ecology

Quaternary Ecology, Evolution, and Biogeography Valenti Rull, 2020-03-05 Quaternary Ecology Evolution and Biogeography offers an introduction to the study of the ecological and evolutionary processes that have shaped our present biosphere under the influence of glacial interglacial cycles Written by an ecologist with paleoecological expertise this book reviews the climatic changes that have occurred during the last 2.6 million years along with the responses of organisms and ecosystems It offers an understanding of the evolutionary origin of extant biodiversity its biogeographical patterns and the composition of modern ecological communities In addition it explores human evolution and the influence of our activities on the biosphere especially in the last millennia This book offers the latest information on how studying the past can contribute to our understanding of present climate issues for a better future and is an ideal resource for researchers and students in the natural sciences Includes the latest developments in genomics and their relevance within Quaternary evolution Offers a holistic view of the origin of biodiversity patterns and community assembly Discusses the role of climate on human evolution and the ecological consequences for natural systems

Quaternary Ecology P. Delcourt, 1991-08-14 Over the past several decades the field of Quaternary ecology has undergone a fundamental change in perspective Paleoecologists who were formerly concerned with biostratigraphic questions have increasingly begun to develop and test explicitly ecological hypotheses Literature emphasizing the contributions of paleoecology to contemporary issues in ecology is growing but many of the key papers are published in journals not traditionally read by ecologists The tendency toward increased specialization within ecology along with the proliferation of new journals as publication outlets increasingly makes it difficult to communicate effectively across subdisciplines within ecology With this book we hope to bridge the communication gap between Quaternary ecologists and other ecologists In this book we do not attempt to cover the subject of Quaternary ecology in a traditional textbook presentation Two comprehensive books one contemporary text Birks and Birks 1980 and a handbook of techniques Berglund 1986 appropriate to various specialties within this field are available to the reader who is interested in the details of methods used in reconstructing past communities and ecosystems

Late Quaternary Environmental Change Martin Bell, M.J.C. Walker, 2014-07-10 Late Quaternary Environmental Change addresses the interaction between human agency and other environmental factors in the landscapes particularly of

the temperate zone Taking an ecological approach the authors cover the last 20 000 years during which the climate has shifted from arctic severity to the conditions of the present interglacial environment **Terrestrial Ecosystems in Changing Environments** Herman Henry Shugart,1998-03-26 A unique review of the problem of predicting the response of ecosystems to changed conditions **Environmental Change** Richard Huggett,2003-09-02 Huggett presents an introductory exploration of past present and future change in the environment Exploring rates and directions of change introduces the interdependent parts of the natural environment **Conservation Biogeography** Richard J. Ladle,Robert J. Whittaker,2011-01-11 CONSERVATION BIOGEOGRAPHY The Earth s ecosystems are in the midst of an unprecedented period of change as a result of human action Many habitats have been completely destroyed or divided into tiny fragments others have been transformed through the introduction of new species or the extinction of native plants and animals while anthropogenic climate change now threatens to completely redraw the geographic map of life on this planet The urgent need to understand and prescribe solutions to this complicated and interlinked set of pressing conservation issues has lead to the transformation of the venerable academic discipline of biogeography the study of the geographic distribution of animals and plants The newly emerged sub discipline of conservation biogeography uses the conceptual tools and methods of biogeography to address real world conservation problems and to provide predictions about the fate of key species and ecosystems over the next century This book provides the first comprehensive review of the field in a series of closely interlinked chapters addressing the central issues within this exciting and important subject **General Technical Report NE** ,1980
