Values in Science Education Deborah Corrigan,Cathy Bunting,Angela Fitzgerald,Alister Jones,2020-05-18 In 2007 the Monash Kings College London International Centre for the Study of Science and Mathematics Curriculum edited a book called The Re emergence of Values in Science Education This book reflects on how values have been considered since this original publication particularly in terms of socio cultural economic and political factors that have impacted broadly on science technology and society and more specifically on informal and formal science curricula Hence the title of this book has been framed as Values in Science Education The shifting sands As in the first book this collection focuses on values that are centrally associated with science and its teaching and not the more general notion of values such as cooperation or teamwork that are also important values in current curricula Such values have indeed become more of a focus in science education This may be a response to the changing global context where technological changes have been rapid and accelerating In such complex and risky environments it is our guiding principles that become the important mainstays of our decisions and practices In terms of science education what is becoming clearer is that traditional content and traditional science and scientific methods are not enough for science and hence science education to meet such challenges While shifts in values in science education continue tensions remain in curriculum development and implementation as evidenced by the continued diversity of views about what and whose values matter most

Towards Humane Technologies, 2008-01-01 What are the ethical and political implications when the very foundations of life things of awe and spiritual significance are translated into products accessible to few people This book critically analyses this historic recontextualisation Through mediation when meaning moves from one text to another from one discourse to another biotechnology is transformed into analysable data and into public discourses The unique book links biotechnology with media and citizenship As with any commodity biological products have been commodified Because enormous speculative investment rests on this risk will be understated and benefit will be overstated Benefits will be unfairly distributed Already the bioprospecting of Southern megadiverse nations legally sanctioned by U S property rights conventions has led to wealth and health benefits in the North Crucial to this development are biotechnological discourses that shift meanings from a language of life into technocratic discourses infused with neo liberal economic assumptions that promise progress and benefits for all Crucial in this is the mass media's representation of biotechnology for an audience with poor scientific literacy Yet even apparently benign biotechnology spawned by the Human Genome Project such as prenatal screening has eugenic possibilities and genetic codes for illness are eagerly sought by insurance companies seeking to exclude certain people These issues raise important questions about a citizenship that is founded on moral responsibility for

the wellbeing of society now and into the future After all biotechnology is very much concerned with the essence of life itself This book provides a space for alternative and dissident voices beyond the hype that surrounds biotechnology **Micro- and Nanotechnology in Vaccine Development** Mariusz Skwarczynski,Istvan Toth,2016-09-20 This book provides a comprehensive overview of how use of micro and nanotechnology MNT has allowed major new advance in vaccine development research and the challenges that immunologists face in making further progress MNT allows the creation of particles that exploit the inherent ability of the human immune system to recognize small particles such as viruses and toxins In combination with minimal protective epitope design this permits the creation of immunogenic particles that stimulate a response against the targeted pathogen The finely tuned response of the human immune system to small particles makes it unsurprising that many of the lead adjuvants and vaccine delivery systems currently under investigation are based on nanoparticles Provides a comprehensive and unparalleled overview of the role of micro and nanotechnology in vaccine development Allows researchers to quickly familiarize themselves with the broad spectrum of vaccines and how micro and nanotechnologies are applied to their development Includes a combination of overview chapters setting out general principles and focused content dealing with specific vaccines making it useful to readers from a variety of disciplines **The Proceedings and Transactions of the Nova Scotian Institute of Science** Nova Scotian Institute of Science,1895
