Redefining Diversity and Dynamics of Natural Resources Management in Asia, Volume 2 Ganesh Shivakoti, Mai Van Thanh, Tran Duc Vien, Stephen J Leisz, 2016-09-01 Redefining Diversity and Dynamics of Natural Resources Management in Southeast Asia Volumes 1 & 2 brings together scientific research and policy issues across various topographical areas in Asia to provide a comprehensive overview of the issues facing the region Upland Natural Resources and Social Ecological Systems in Northern Vietnam Volume 2 provides chapters on natural resource management in northern Vietnam tied together by the concept that participatory local involvement is needed in all aspects of natural resource management The volume examines planning for climate change managing forestland alleviating food shortages living with biodiversity and assessing the development projects and policies being implemented Without the involvement of local communities households and ultimately individual people the needed action will not be effectively taken Upland Natural Resources and Social Ecological Systems in Northern Vietnam Volume 2 goes beyond just Northern Vietnam to address the issue of transboundary natural resource management an issue that Vietnam is dealing with in its relations with northern neighbor China and western neighbor Laos as well as the transboundary water governance between Pakistan and India in south Asia with the hope that some of the lessons learned may one day be useful in the case of Vietnam and its neighbors Provides a multi disciplinary case study into a complex environmental situation involving government institutions planning and practices using northern Vietnam as the focus Covers the issues of natural resource management and biodiversity in depth using international case studies Provides examples of measuring the potential climate change impacts on food security in agricultural regions Examines topics such as planning for climate change managing forestland alleviating food shortages living with biodiversity and assessing development projects and policies *Queensland, Australia's Dynamic State* Philippa Sandall, 1999

**Dynamics of Difference in Australia** Francesca Merlan, 2018-04-04 In Dynamics of Difference in Australia Francesca Merlan examines relations between indigenous and nonindigenous people from the events of early exploration and colonial endeavors to the present day From face to face interactions to national and geopolitical affairs the book illuminates the dimensions of difference that are revealed by these encounters what indigenous and nonindigenous people pay attention to what they value what preconceived notions each possesses and what their responses are to the Other Basing her analysis on her extensive fieldwork in northern Australia Merlan highlights the asymmetries in the exchanges between the settler majority and the indigenous minority looking at everything from forms of violence and material transactions to indigenous involvement in resource development to governmental intervention in indigenous affairs Merlan frames the book within the current debate in Australian society concerning the constitutional recognition of indigenous people by the nation state Surveying the precursors to this question and its continuing and unresolved nature she chronicles the ways in which an indigenous minority can remain culturally different while simultaneously experiencing the transformative forces of

domination constraint and inequality Conducting an investigation of long term change against the backdrop of a highly salient and timely public debate surrounding indigenous issues Dynamics of Difference has far reaching implications both for public policy and for current theoretical debates about the nature of sociocultural continuity and change Metastable Dynamics of Neural Ensembles Emili Balaguer-Ballester, Ruben Moreno-Bote, Gustavo Deco, Daniel Durstewitz, 2018-03-19 A classical view of neural computation is that it can be characterized in terms of convergence to attractor states or sequential transitions among states in a noisy background After over three decades is this still a valid model of how brain dynamics implements cognition This book provides a comprehensive collection of recent theoretical and experimental contributions addressing the question of stable versus transient neural population dynamics from complementary angles These studies showcase recent efforts for designing a framework that encompasses the multiple facets of metastability in neural responses one of the most exciting topics currently in systems and computational neuroscience **Hydrological Changes and**

**Estuarine Dynamics** Paul Montagna, Terence A. Palmer, Jennifer Beseres Pollack, 2012-10-31 Water development projects have altered the environmental flow landscapes where dams and diversions have been built and this could have effects on coastal resources particularly in estuaries Water is an important human resource and water needs grow as populations grow However freshwater inflow to the coast is fundamental to the functioning of estuaries Can we have stable secure and sufficient water resources for people and still protect estuarine health Estuaries are the most productive environments on Earth and this is in part due to freshwater inflow which dilutes marine water and transports nutrients and sediments to the coast Estuaries are characterized by salinity and nutrient gradients which are important in regulating many biological processes As water is diverted for human consumption it is common for many environmental problems to appear While many countries have water quality programs few are dealing with water quantity alterations The first step is to define marine resources to protect and the water quality conditions those resources need to thrive The second step is to determine the flow regimes needed to maintain the desired water quality conditions Finally many regions are using adaptive management programs to manage freshwater resources These programs set goals to protect ecosystem resources identify indicators and monitor the indicators over time to ensure that the goals are appropriate and resources are protected Case studies demonstrate that monitoring and research can determine the ecological and socio economical impacts of altered freshwater inflows and stakeholders and managers can make well informed decisions to manage freshwater inflows to local coasts wisely

New Models for Ecosystem Dynamics and Restoration Richard J. Hobbs, Katharine N. Suding, Peter Society for Ecological Restoration International, 2013-03-19 As scientific understanding about ecological processes has grown the idea that ecosystem dynamics are complex nonlinear and often unpredictable has gained prominence Of particular importance is the idea that rather than following an inevitable progression toward an ultimate endpoint some ecosystems may occur in a number of states depending on past and present ecological conditions The emerging idea of restoration thresholds also enables scientists to recognize when ecological systems are likely to recover on their own and when active restoration efforts are needed Conceptual models based on alternative stable states and restoration thresholds can help inform restoration efforts New Models for Ecosystem Dynamics and Restoration brings together leading experts from around the world to explore how conceptual models of ecosystem dynamics can be applied to the recovery of degraded systems and how recent advances in our understanding of ecosystem and landscape dynamics can be translated into conceptual and practical frameworks for restoration In the first part of the book background chapters present and discuss the basic concepts and models and explore the implications of new scientific research on restoration practice The second part considers the dynamics and restoration of different ecosystems ranging from arid lands to grasslands woodlands and savannahs to forests and wetlands to production landscapes A summary chapter by the editors discusses the implications of theory and practice of the ideas described in preceding chapters New Models for Ecosystem Dynamics and Restoration aims to widen the scope and increase the application of threshold models by critiquing their application in a wide range of ecosystem types It will also help scientists and restorationists correctly diagnose ecosystem damage identify restoration thresholds and develop corrective methodologies that can overcome such thresholds

**Dynamics of Marketing in African Nations** Sonny Nwankwo, Joseph F. Aiyeku, 2002-05-30 Consider Africa not with pre established mindsets unexamined assumptions and bland generalizations but for what Africa actually is a setting in which marketers can gather new ideas and test old ones and perhaps emerge with a more varied certain sense of what the marketing enterprise itself is all about Nwankwo Aiyeku and their contributing authors all specialists with a remarkably wide range of experience and viewpoints uncover the unexpected factors that they are certain will determine the success of selling just about any product or service to established or developing African nations Original eclectic and agenda setting their book provides a startling insight into the dynamics of marketing in this fascinating region of the world as it continues to initiate the new macroeconomic and political reforms that are transforming the African continent into an important player on the international business scene Nwankwo and Aiyeku see their book as a welcome attempt to identify and explore the institutional processes in which not only the study but also the practice of marketing is embedded They work with three main themes the processual issues including theory development and the reconceptualization of conventional paradigms the nature of the interrelationships that shape the dynamics of marketing overall and the context specific dimensions of marketing generally its marketing operations As the volume editors state By and large African nations present new contexts and new strategic challenges As they become focused certain general approaches as to how various characteristics influence marketing behaviors have to be established This book through addressing these contextual issues provides a better focus for creating a relevant set of marketing activities in African situations

From Fires to Oceans: Dynamics of Fire-Derived Organic Matter in Terrestrial and Aquatic Ecosystems Samuel Abiven, Cristina Santín, 2019-05-09 Fire derived organic matter also known as pyrogenic carbon PyC is ubiquitous on Earth It can be found in soils sediments water and air In this wide range of environments fire derived organic matter represents a key component of the organic matter pool and in many cases the largest identifiable group of organic compounds PyC is also one of the most persistent organic matter fractions in the ecosystems and its study is therefore particularly relevant for the global carbon cycle From its production during vegetation fires to its transfer into soils sediments and waters PyC goes through different transformations both abiotic and biotic Contrary to early assumptions PyC is not inert and interacts strongly with the environment evidence of microbial decomposition oxidation patterns and interactions with minerals have been described

in different matrices PyC travels across these different environments and it is modified chemically and physically but remains persistent This Research Topic explores important questions in our understanding of fire derived organic matter from the characterization and quantification of PyC components to the transformation and mobilization processes taking place on terrestrial and aquatic ecosystems The studies compiled here provide novel and often unexpected results They all answer some of the questions posed and more importantly provide scope for many more
