Querying Databases Privately A New Approach To Private Information Retrieval:

Querying Databases Privately Dmitri Asonov,2005-01-14 The Internet and the World Wide Web WWW play an increasingly imp tant role in our today s activities More and more we use the Web to buy goods and to inform ourselves about cultural political economical medical and scienti c developments For example accessing ight schedules me cal data or retrieving stock information become common practice in today s world Many people assume that there is no one who watches them when accessing this data However sensitive userswho accesselectronic shops e shops might have observedthat this assumptionoften isnot true In many cases E shopstrack the users accessbehaviorwhen browsingthe Web pagesof the e shopthus deriving accesspatterns for individual shoppers Therefore this knowledge on access behavior and access patters allows the system to tailor access to Webpagesforthatusertohis herspeci cneedsinthefuture Thistrackingof usersmightbeconsideredharmlessandacceptableinmanycases However in cases when this information is used to harm a person for example about the person s health problems or to violate his her privacy for example nding out about his her nancial situation he she would like to be sure that such tracking is impossible to protect the user s rights   Handbook of Financial Cryptography and Security Burton Rosenberg,2010-08-02 The Handbook of Financial Cryptography and Security elucidates the theory and techniques of cryptography and illustrates how to establish and maintain security under the framework of financial cryptography It applies various cryptographic techniques to auctions electronic voting micropayment systems digital rights financial portfolios routing   Encyclopedia of Cryptography and Security Henk C.A. van Tilborg,Sushil Jajodia,2011-09-06 This comprehensive encyclopedia provides easy access to information on all aspects of cryptography and security The work is intended for students researchers and practitioners who need a quick and authoritative reference to areas like data protection network security operating systems security and more   **Privacy in Location-Based Applications** Claudio Bettini,Sushil Jajodia,Pierangela Samarati,Sean X. Wang,2009-07-30 Location based applications refer to those that use location data in a prominent manner Location data can be very effective for service provisioning enabling the birth of a new generation of information services Although data security and privacy issues have been extensively investigated in several domains current techniques are not readily applicable to location based applications Conciliating the effectiveness of these applications with privacy concerns constitutes a unique challenge mostly due to the semantic richness of location and time information Research in this field involves aspects of spatio temporal reasoning query processing system security statistical inference and more importantly anonymization techniques Several research groups have been working in recent years to identify privacy attacks and defense techniques in this domain This state of the art survey provides a solid ground for researchers approaching this topic to understand current achievements through a common categorization of privacy threats and defense techniques This objective is particularly challenging considering the specific and often implicit assumptions that characterize the recent literature on privacy in location based services The book

also illustrates the many facets that make the study of this topic a particularly interesting research subject including topics that go beyond privacy preserving transformations of service requests and include access control privacy preserving publishing of moving object data privacy in the use of specific positioning technology and privacy in vehicular network applications   Handbook of Mobile Data Privacy Aris Gkoulalas-Divanis,Claudio Bettini,2018-10-26 This handbook covers the fundamental principles and theory and the state of the art research systems and applications in the area of mobility data privacy It is primarily addressed to computer science and statistics researchers and educators who are interested in topics related to mobility privacy This handbook will also be valuable to industry developers as it explains the state of the art algorithms for offering privacy By discussing a wide range of privacy techniques providing in depth coverage of the most important ones and highlighting promising avenues for future research this handbook also aims at attracting computer science and statistics students to this interesting field of research The advances in mobile devices and positioning technologies together with the progress in spatiotemporal database research have made possible the tracking of mobile devices and their human companions at very high accuracy while supporting the efficient storage of mobility data in data warehouses which this handbook illustrates This has provided the means to collect store and process mobility data of an unprecedented quantity quality and timeliness As ubiquitous computing pervades our society user mobility data represents a very useful but also extremely sensitive source of information On one hand the movement traces that are left behind by the mobile devices of the users can be very useful in a wide spectrum of applications such as urban planning traffic engineering and environmental pollution management On the other hand the disclosure of mobility data to third parties may severely jeopardize the privacy of the users whose movement is recorded leading to abuse scenarios such as user tailing and profiling A significant amount of research work has been conducted in the last 15 years in the area of mobility data privacy and important research directions such as privacy preserving mobility data management privacy in location sensing technologies and location based services privacy in vehicular communication networks privacy in location based social networks privacy in participatory sensing systems which this handbook addresses This handbook also identifies important privacy gaps in the use of mobility data and has resulted to the adoption of international laws for location privacy protection e g in EU US Canada Australia New Zealand Japan Singapore as well as to a large number of interesting technologies for privacy protecting mobility data some of which have been made available through open source systems and featured in real world applications

Private Information Retrieval Xun Yi,Russell Paulet,Elisa Bertino,2022-05-31 This book deals with Private Information Retrieval PIR a technique allowing a user to retrieve an element from a server in possession of a database without revealing to the server which element is retrieved PIR has been widely applied to protect the privacy of the user in querying a service provider on the Internet For example by PIR one can query a location based service provider about the nearest car park without revealing his location to the server The first PIR approach was introduced by Chor Goldreich Kushilevitz and Sudan

in 1995 in a multi server setting where the user retrieves information from multiple database servers each of which has a copy of the same database To ensure user privacy in the multi server setting the servers must be trusted not to collude In 1997 Kushilevitz and Ostrovsky constructed the first single database PIR Since then many efficient PIR solutions have been discovered Beginning with a thorough survey of single database PIR techniques this text focuses on the latest technologies and applications in the field of PIR The main categories are illustrated with recently proposed PIR based solutions by the authors Because of the latest treatment of the topic this text will be highly beneficial to researchers and industry professionals in information security and privacy   **Official Gazette of the United States Patent and Trademark Office** ,2002   **The British National Bibliography** Arthur James Wells,2004   *Data and Applications Security and Privacy XXVIII* Vijay Atluri,Günther Pernul,2014-06-27 This book constitutes the refereed proceedings of the 28th IFIP WG 11 3 International Working Conference on Data and Applications Security and Privacy DBSec 2014 held in Vienna Austria in July 2014 The 22 revised full papers and 4 short papers presented were carefully reviewed and selected from 63 submissions The papers are organized in topical sections on access control privacy networked and mobile environments data access cloud databases and private retrieval   Cryptology and Network Security Srdjan Capkun,Sherman S. Koien,Vladimir a. Oleshchuk,2025-01-13 The modern society is rapidly becoming a fully digital society This has many benefits but unfortunately it also means that personal privacy is threatened The threat does not so much come from a 1984 style Big Brother but rather from a set of smaller big brothers The small big brothers are companies that we interact with they are public services and institutions Many of these little big brothers are indeed also being invited to our private data by ourselves Privacy as a subject can be problematic At the extreme it is personal freedom against safety and security We shall not take a political stand on personal privacy and what level of personal freedom and privacy is the correct one Aspects of Personal Privacy in Communications is mostly about understanding what privacy is and some of the technologies may help us to regain a bit of privacy We discuss what privacy is about what the different aspects of privacy may be and why privacy needs to be there by default There are boundaries between personal privacy and societal requirements and inevitably society will set limits to our privacy Lawful Interception etc There are technologies that are specifically designed to help us regain some digital privacy These are commonly known as Privacy Enhancing Technologies PETs We investigate some these PETs

including MIX networks Onion Routing and various privacy preserving methods Other aspects include identity and location privacy in cellular systems privacy in RFID Internet of Things IoT and sensor networks amongst others Some aspects of cloud systems are also covered **Information Assurance and Computer Security** Johnson P.
