Out There Michael Wall, 2018-11-13 In the vein of Randall Munroe's What If meets Brian Green's Elegant Universe a senior writer from Space.com leads readers on a wild ride of exploration into the final frontier investigating what's really out there We've all asked ourselves the question It's impossible to look up at the stars and NOT think about it Are we alone in the universe Books movies and television shows proliferate that attempt to answer this question and explore it In Out There Space.com senior writer Dr Michael Wall treats that question as merely the beginning touching off a wild ride of exploration into the final frontier He considers for instance the myriad of questions that would arise once we do discover life beyond Earth an eventuality which top NASA officials told Wall is only drawing closer What would the first aliens we meet look like Would they be little green men or mere microbes Would they be found on a planet in our own solar system or orbiting a star far far away Would they intend to harm us and if so how might they do it And might they already have visited Out There is arranged in a simple question and answer format The answers are delivered in Dr Wall's informal but informative style which mixes in a healthy dose of humor and pop culture to make big ideas easier to swallow Dr Wall covers questions far beyond alien life venturing into astronomy physics and the practical realities of what long term life might be like for mere humans in outer space such as the idea of lunar colonies and even economic implications Dr Wall also shares the insights of some of the leading lights in space exploration today and shows how the next space age might be brighter than ever

Extraterrestrial Avi Loeb, 2021-02-04 An astronomical Sherlock Holmes

WASHINGTON POST Visionary STEPHEN GREENBLATT Compelling The book is not so much a claim for one object as an argument for a more open minded approach to science a combination of humility and wonder

NEW STATESMAN i font Harvard's top astronomer takes us inside the mind blowing story of the first interstellar visitor to our solar system In late 2017 scientists at a Hawaiian observatory glimpsed a strange object soaring through our inner solar system Astrophysicist

Avi Loeb conclusively showed it was not an asteroid it was moving too fast along a strange orbit and leaving no trail of gas or debris in its wake There was only one conceivable explanation the object was a piece of advanced technology created by a distant alien civilization In Extraterrestrial Loeb takes readers inside the thrilling story of the first interstellar visitor to be spotted in our solar system He outlines his theory and its profound implications for science for religion and for the future of our planet A mind bending journey through the furthest reaches of science space time and the human imagination

Extraterrestrial challenges readers to aim for the stars and to think critically about what's out there no matter how strange it seems **Here Be Dragons** David W. Koerner, Simon LeVay, 2001-11-15 The discovery of life on other planets would be perhaps the most momentous revelation in human history more disorienting and more profound than either the Copernican or Darwinian revolutions which knocked the earth from the center of the universe and humankind from its position of lofty self regard In Here Be Dragons astronomer David Koerner and neurobiologist Simon LeVay offer a scientifically compelling and colorful account of the search for life beyond Earth The authors survey the work of biologists cosmologists computer theorists NASA engineers SETI researchers roboticists and UFO enthusiasts and debunkers as they attempt to answer the greatest remaining question facing humankind Are we alone From their safe haven of skepticism the authors venture into the rough seas of speculation where theory and evidence run the gamut from hard science to hocus pocus Arguing that the universe is spectacularly suited for the evolution of living creatures Koerner and LeVay give us ringside seats at the great debates of Big Science The contentious arguments about what really happens in evolution the acrimonious UFO controversy and the debate over intelligence versus artificial intelligence shed new light on the wildly divergent claims about the universe and life's place in it The authors argue that while no direct evidence of extraterrestrial life yet exists habitats and chemical building blocks for life abound in the universe A wealth of new astronomical techniques and space missions may provide this evidence early in the next century Lucidly written and scientifically rigorous Here Be Dragons presents everything we know thus far about the emergence of intelligent life here on earth and perhaps beyond **We Are Not Alone** Dirk

Schulze-Makuch, David Darling, 2011-03-01 Life on Mars exists but we are too timid to accept the facts Life on Mars exists but are we brave enough to accept the facts Extraterrestrial life exists and there's evidence to prove it The question are we alone has haunted the human race for centuries In this compelling and controversial work Dirk Schulze Makuch and David Darling argue that we already know the answer no Abundant extraterrestrial life is astrobiological fact and there is evidence to prove it Far from existing light years away in the outer reaches of space it's on our very doorstep From methane oceans on Titan to advanced organic molecules on Mars Schulze Makuch and Darling contend that microbial life is a near certainty both in the Solar System and beyond Using the latest scientific data including from the Phoenix probe which landed on Mars in 2008 We Are Not Alone stands to truly revolutionize our perception of our place in the universe Planet Quest Ken Croswell, 1999 Are we alone In 1995 planet hunters discovered the first alien solar system around a star like our own Sun Ken Croswell tells

the fascinating story of this discovery and the people who made it then explores the possibility that one day we may have the technology to travel to different solar systems and find life
