Murray Gell-mann - Selected Papers Harald Fritzsch, 2010-02-08 Murray Gell Mann is one of the leading physicists of the world He was awarded the Nobel Prize in Physics in 1969 for his work on the classification and symmetries of elementary particles including the approximate SU 3 symmetry of hadrons His list of publications is impressive a number of his papers have become landmarks in physics In 1953 Gell Mann introduced the strangeness quantum number conserved by the strong and electromagnetic interactions but not by the weak interaction In 1954 he and F E Low proposed what was later called the renormalization group In 1958 he and R P Feynman wrote an

important article on the V A theory of the weak interaction In 1961 and 1962 he described his ideas about the SU 3 symmetry of hadrons and its violation leading to the prediction of the particle In 1964 he proposed the quark picture of hadrons In 1971 he and H Fritzsch proposed the exactly conserved color quantum number and in 1972 they discussed what they later called quantum chromodynamics QCD the gauge theory of color These major publications and many others are collected in this volume providing physicists with easy access to much of Gell Mann s work Some of the articles are concerned with his recollections of the history of elementary particle physics in the third quarter of the twentieth century

Quantum Mechanics In Phase Space: An Overview With Selected Papers Thomas L Curtright, David B Fairlie, Cosmas K Zachos, 2005-12-09 Wigner's quasi probability distribution function in phase space is a special Weyl representation of the density matrix It has been useful in describing quantum transport in quantum optics nuclear physics decoherence quantum computing and quantum chaos It is also important in signal processing and the mathematics of algebraic deformation A remarkable aspect of its internal logic pioneered by Groenewold and Moyal has only emerged in the last quarter century it furnishes a third alternative formulation of quantum mechanics independent of the conventional Hilbert space or path integral formulations In this logically complete and self standing formulation one need not choose sides coordinate or momentum space It works in full phase space accommodating the uncertainty principle and it offers unique insights into the classical limit of quantum theory This invaluable book is a collection of the seminal papers on the formulation with an introductory overview which provides a trail map for those papers an extensive bibliography and simple illustrations suitable for applications to a broad range of physics problems It can provide supplementary material for a beginning graduate course in quantum mechanics

Formation And Evolution Of Black Holes In The Galaxy: Selected Papers With Commentary Hans A Bethe, Gerald E Brown, Chang-hwan Lee, 2003-03-04 In published papers H A Bethe and G E

Brown worked out the collapse of large stars and supernova explosions They went on to evolve binaries of compact stars finding that in the standard scenario the first formed neutron star always went into a black hole in common envelope evolution C H Lee joined them in the study of black hole binaries and gamma ray bursts They found the black holes to be the fossils of the gamma ray bursts From their properties they could reconstruct features of the burst and of the accompanying hypernova explosions This invaluable book contains 23 papers on astrophysics chiefly on compact objects written over 23 years The papers are accompanied by illuminating commentary In addition there is an appendix on kaon condensation which the editors believe to be relevant to the equation of state in neutron stars and to explain why black holes are formed at relatively low masses
