Questions To The Universe Ten Lectures On The Foundations Of Physics And Cosmology:

Questions to the Universe Michał Heller, 1986 **Questions to the Universe** Heller Michael, 1987 **Horizons of Cosmology** Joseph Silk, 2011-04-01 Horizons of Cosmology Exploring Worlds Seen and Unseen is the fourth title published in the Templeton Science and Religion Series in which scientists from a wide range of fields distill their experience and knowledge into brief tours of their respective specialties In this volume highly esteemed astrophysicist Joseph Silk explores the vast mysteries and speculations of the field of cosmology in a way that balances an accessible style for the general reader and enough technical detail for advanced students and professionals Indeed while the physical laws and origins of the universe can be endlessly complex even Einstein once mused that they could be explained simply enough to be grasped by nonspecialists To that end Silk begins by introducing the basic story of the major discoveries in cosmology over the past century wherein we learned that we live in an expanding universe populated with galaxies and stars The middle chapters examine a number of contemporary puzzles such as dark matter and dark energy The last third of the book looks at the human side of cosmology and moves to the more philosophical frontiers of the field such as concepts of multiverses and time travel areas of exploration where some crossover into speculative territory becomes unavoidable In the past century alone our understanding of the universe has expanded exponentially and it will be fascinating to see what discoveries the next hundred years hold Few books will provide such a thorough understanding of where we have been and what might lie ahead as Horizons of Cosmology Beyond the Big Bang Willem B. Drees, 1990 Originally presented as the author's thesis doctoral University of Groningen Includes bibliographical references p 291 316 and index *Literature 1987, Part 1* S. Böhme, U. Esser, H.
