*Developmental Biology* Michael Locke, 2014-05-12 *Developmental Biology Supplement 1 Control Mechanisms in Developmental Processes* focuses on the process of how organs grow and develop This book is organized into three main topics role of cytoplasmic units role of the nucleus and regulatory mechanisms This compilation specifically discusses the control mechanisms in plastid development nuclear control of morphology and possible involvement of mitochondrial DNA The mode of operation of a regulatory system in maize hooded gene in barley and regulation of the cell cycle in mammalian cells are also described This text likewise considers the development of immunocompetent cells regulatory action of estrogenic hormones and biological activity of uterine RNA This publication is suitable for biologists specialists and students concerned with developmental processes

**International Review of Cytology**, 1963-01-01 *International Review of Cytology*

**Nuclear Cytology in Relation to Development** F. D'amato, 1977-09-08 *Control Mechanisms in Developmental Processes* Michael Locke, 2012-12-02 *Control Mechanisms in Developmental Processes* covers the proceedings of the 1967 26th Symposium of The Society for Developmental Biology held in La Jolla California This book is divided into three parts encompassing 10 chapters that summarize the role of cytoplasmic units and the nucleus in developmental processes and the regulatory mechanisms The opening part of the book describes the chemical changes during the development of plastids in leaves of higher plants The book goes on discussing the nuclear and cytoplasmic controls in *Neurospora* morphology This compilation also examines the aspects of development growth and control in the basal bodies and flagella of *Chlamydomonas reinhardtii* The second part describes genetic systems in plants that serve to initiate or program the sequence in plant development and the life cycle of hybrids between somatic cells of different species A chapter discusses the genetic basis of higher plant morphogenesis by analysis of the differences between genotypes that differ from each other with respect to a single gene having a pronounced and highly specific effect upon form A discussion on the activation of protein synthesis upon fertilization and early development of animal eggs to the biochemical basis of the determination process is also included The concluding part deals with the differentiation of erythroid cells the induction of hemoglobin synthesis the regulation of heme and globin synthesis and the role of heme in the synthesis and assembly of hemoglobin This part also describes the differentiation of cells to the point where they can perform the various types of immunological reactions This book is an invaluable source for developmental biologists and researchers

**Cytology and Cell Physiology** Geoffrey Bourne, 2012-12-02 *Cytology and Cell Physiology Third Edition* focuses on cell cytology and physiology as well as recent advances in the techniques in studying cells including microscopy It also describes cell membranes surface and physiology cytoplasmic constituents nucleus and nucleocytoplasmic reactions enzyme histochemistry and cytochemistry viruses within cells and morphology of the cancer cell Organized into 13 chapters this edition begins with a historical overview of cytology the template hypothesis of protein synthesis and the respiratory function of mitochondria It

then discusses the subcellular components and their centrifugal isolation some general principles of microscopy selected physical and physicochemical methods applications of enzyme histochemistry to electron microscopy and structure and physical properties of the plasma membrane The remaining chapters focus on the endoplasmic reticulum the Golgi apparatus the nucleus and its role in cell metabolism RNA synthesis and movement the behavior of viruses within cells and pathological changes in cells The book concludes with a chapter on the function and metabolism of cancer cells This book is highly recommended to cytologists investigators in the field of pathology and graduate students in biology biochemistry physiology and anatomy *Elements of Cytology* Norman S. Cohn, 1969 The Developmental Biology of Reproduction Clement Markert, 2012-12-02 The Developmental Biology of Reproduction documents the proceedings of the 33rd symposium of the Society for Developmental Biology Reproductive Biology was selected as the main theme of the symposium The symposium aimed to draw center attention on basic aspects of reproduction in both plants and animals in the hope of stimulating research that might provide the necessary foundation for effective practical control of human reproduction Five areas were selected for emphasis the formation of eggs and sperm the activation of the egg to develop into an embryo the genetic and biochemical events underlying the early development of the embryo the hormonal controls operating in the reproductive process and the general control of implantation and growth of the mammalian embryo in the uterus Thirteen reports were given by distinguished researchers in each of these areas All biologists interested in a broad understanding of problems of reproduction will find this symposium interesting and important for their own work Current Topics in Developmental Biology, 1981-01-09 Current Topics in Developmental Biology is a long standing series that provides comprehensive surveys of major topics in the field of developmental biology Volume 15 has a focus on developmental neurobiology and includes articles written by outstanding research scientists who themselves investigate various aspects of the volume's central theme This volume should be particularly appealing to principal investigators post doctoral fellows and graduate students who are looking for up to date in depth reviews of cellular and molecular mechanisms in animal and plant development

**Developmental Studies on Giant Chromosomes** W. Beermann, 2013-06-29 Earlier titles in this series have directed attention to selected questions of current theoretical or practical interest in developmental biology without special emphasis upon individual biological systems To choose giant polytene chromosomes as the common denominator of a new volume may at first sight seem to set rather arbitrary restrictions upon a coherent discussion of the basic problem of cellular differentiation However the reader will find out for himself that on the contrary such a limitation though dictated by the material focuses the analysis upon one essential point the differential release of genetic information from operational subunits of the eukaryotic chromosome In the organization of this volume we have not striven for completeness some indeed may feel that the work on Sciarids is underrepresented but the various contributors have made every effort to render a thorough and up to date picture of the situation in their particular field and on this basis to discuss all possible angles of

general biological interest Authors and editors have agreed to dedicate this volume to the memory of JACK SCHULTZ

**Handbook of Phycological Methods: Developmental and cytological methods, edited by E. Gantt** Elisabeth Gantt, 2008     National Cancer Institute Monograph National Cancer Institute (U.S.), 1965-12     **Plant Tissue Culture: Theory and Practice** S.S. Bhojwani, M.K. Razdan, 1996-11-08 Since the publication of the first edition in 1983 several new and exciting developments have taken place in the field of plant tissue culture which forms a major component of what is now called plant biotechnology The revised edition presents updated information on theoretical practical and applied aspects of plant tissue culture Each chapter has been thoroughly revised and as before is written in lucid language includes relevant media protocols and is profusely illustrated with self explanatory diagrams and original photographs This book includes three new chapters Variant selection Genetic Engineering and Production of Industrial Compounds and contains a complete bibliography and a glossary of terms commonly used in tissue culture literature This updated version proves to be an excellent text for undergraduate postgraduate students and teachers in various fields of plant sciences and a useful reference book for those interested in the application of any aspect of this aseptic technology     **Methods in Cell Biology**, 1970-04-30 *Methods in Cell Biology*     *Cell Physiology and Genetics of Higher Plants* A. Rutter, 1964     *Biochemical Differentiation in Insect Glands* W. Beermann, 2013-06-29 The majority of studies devoted to animal development traditionally start out from questions of morphogenesis Of course visible differentiation as well as the events leading to it should ultimately become describable in molecular terms Nevertheless even simple morphogenetic processes may have a complex biochemical basis which makes it difficult to recognize the key functions involved This difficulty obviously does not exist in the case of glands i e organs and tissues primarily concerned with and characterized by the nature of their products i e one or a few secretory proteins synthesized in huge quantities In these systems when we observe differences between different portions of a gland or when switches of the synthetic activity occur during development there is no question as to what we have to look for we are directly faced with the fact of differential protein synthesis and the problem of its control Insect glands in addition share other significant properties i e the absence of cell division during growth and concomitantly the formation of giant cells with polyploid or polytene nuclei This unique set of peculiarities can be fully exploited only if one compares various representative systems everyone of which when considered by itself might appear too exotic to invite generalization In the present volume the editors have endeavored to bring together contributions covering selected insect glands from various points of view including the developmental molecular genetic and cytogenetic aspects     **Bibliography of Agriculture**, 1960     Bibliography of Agriculture with Subject Index, 1960     Cellular Membranes in Development Michael Locke, 2012-12-02 *Cellular Membranes in Development* covers the proceedings of the 1963 22nd Symposium on The

Society for the Study of Development and Growth held in Storrs Connecticut This book is organized into 10 chapters that discuss the properties isolation function composition and physiological aspects of membranes After briefly dealing with the principles of the unit membrane concept the book describes the properties of lipid membranes of bilayer thickness with biological relevance The next chapter focuses on hepatic cell and the modifications of the endoplasmic reticulum in cell differentiation in normal and cancerous growth Another chapter describes the developmental changes in a particular experimental systems and the modification of the membranes by specific treatments using the apical portion of the primary root of *Zea mays* The book also discusses the role of the different organelles in development supporting the idea of topological continuity between the membranes of all the organelles except the mitochondria Other chapters describe the cytology of oogenesis and fertilization in *Pteridium aquilinum* the early events of fertilization in *Hydroides* and *Saccoglossus* and the composition of cell walls of bacteria yeast and fungi Some aspects of the capsules microcapsules and sheaths exhibited by some microorganisms are also covered The last chapters deal with the quantitative aspects of plant cell permeation and permeability function and changes in relation to maturation and growth hormones The book is an ideal source for cell biologists and researchers evolutionists and biochemists
