The Problem of the Earth's Shape from Newton to Clairaut John L. Greenberg, 1995-07-28 This book investigates through the problem of the earth's shape part of the development of post Newtonian mechanics by the Parisian scientific community during the first half of the eighteenth century In the Principia Newton first raised the question of the earth's shape John Greenberg shows how continental scholars outside France influenced efforts in Paris to solve the problem and he also demonstrates that Parisian scholars including Bouguer and Fontaine did work that Alexis Claude Clairaut used in developing his mature theory of the earth's shape The evolution of Parisian mechanics proved not to be the replacement of a Cartesian paradigm by a Newtonian one a replacement that might be expected from Thomas Kuhn's formulations about scientific revolutions but a complex process instead involving many areas of research and contributions of different kinds from the entire scientific world Greenberg both explores the myriad of technical problems that underlie the historical development of part of post Newtonian mechanics which have only been rarely analyzed by Western scholars and embeds his technical discussion in a framework that involves social and institutional history politics and biography Instead of focusing exclusively on the historiographical problem Greenberg shows as well that international scientific communication was as much a vital part of the scientific progress of individual nations during the first half of the eighteenth century as it is today

A Cultural History of Physics Károly Simonyi, 2025-02-28 While the physical sciences are a continuously evolving source of technology and of understanding about our world they have become so specialized and rely on so much prerequisite knowledge that for many people today the divide between the sciences and the humanities seems even greater than it was when C P Snow delivered his famous 1959 lecture The Two Cultures In A Cultural History of Physics Hungarian scientist and educator Károly Simonyi succeeds in bridging this chasm by describing

the experimental methods and theoretical interpretations that created scientific knowledge from ancient times to the present day within the cultural environment in which it was formed Unlike any other work of its kind Simonyi's seminal opus explores the interplay of science and the humanities to convey the wonder and excitement of scientific development throughout the ages These pages contain an abundance of excerpts from original resources a wide array of clear and straightforward explanations and an astonishing wealth of insight revealing the historical progress of science and inviting readers into a dialogue with the great scientific minds that shaped our current understanding of physics Beautifully illustrated accurate in its scientific content and broad in its historical and cultural perspective this book will be a valuable reference for scholars and an inspiration to aspiring scientists and humanists who believe that science is an integral part of our culture

predictably from primitive tools to complex machinery in Deep Time of the Media he illuminates turning points of media history fractures in the predictable that help us see the new in the old Drawing on original source materials Zielinski explores the technology of devices for hearing and seeing through two thousand years of cultural and technological history He discovers the contributions of dreamers and modelers of media worlds from the ancient Greek philosopher Empedocles and natural philosophers of the Renaissance and Baroque periods to Russian avant gardists of the early twentieth century Media are spaces of action for constructed attempts to connect what is separated Zielinski writes He describes models and machines that make this connection including a theater of mirrors in sixteenth century Naples an automaton for musical composition created by the seventeenth century Jesuit Athanasius Kircher and the eighteenth century electrical tele writing machine of Joseph Mazzolari among others Uncovering these moments in the media archaeological record Zielinski says brings us into a new relationship with present day moments these discoveries in the deep time media history shed light on today s media landscape and may help us map our expedition to the media future     National Register of Microform Masters Library of Congress.
