Rulebased Programming With Ops 5:

Rule-Based Programming Thaddeus J. Kowalski, Leon S. Levy, 2012-12-06 Rule Based Programming is a broad presentation of the rule based programming method with many example programs showing the strengths of the rule based approach The rule based approach has been used extensively in the development of artificial intelligence systems such as expert systems and machine learning This rule based programming technique has been applied in such diverse fields as medical diagnostic systems insurance and banking systems as well as automated design and configuration systems Rule based programming is also helpful in bridging the semantic gap between an application and a program allowing domain specialists to understand programs and participate more closely in their development Over sixty programs are presented and all programs are available from an ftp site Many of these programs are presented in several versions allowing the reader to see how realistic programs are elaborated from back of envelope models Metaprogramming is also presented as a technique for bridging the semantic gap Rule Based Programming will be of interest to programmers systems analysts and other developers of expert systems as well as to researchers and practitioners in artificial intelligence computer science professionals and educators

Rules in Database Systems Norman W. Paton, M. Howard Williams, 2012-12-06 This book is the proceedings of a workshop held at Heriot Watt University in Edinburgh in August 1993 The central theme of the workshop was rules in database systems and the papers presented covered a range of different aspects of database rule systems These aspects are reflected in the sessions of the workshop which are the same as the sections in this proceedings Active Databases Architectures Incorporating Temporal Rules Rules and Transactions Analysis and Debugging of Active Rules Integrating Graphs Objects with Deduction Integrating Deductive and Active Rules Integrity Constraints Deductive Databases The incorporation of rules into database systems is an important area of research as it is a major component in the integration of behavioural information with the structural data with which commercial databases have traditionally been associated This integration of the behavioural aspects of an application with the data to which it applies in database systems leads to more straightforward application development and more efficient processing of data Many novel applications seem to need database systems in which structural and behavioural information are fully integrated Rules are only one means of expressing behavioural information but it is clear that different types of rule can be used to capture directly different properties of an application which are cumbersome to support using conventional database architectures In recent years there has been a surge of research activity focusing upon active database systems and this volume opens with a collection of papers devoted specifically to this topic **An OPS5 Primer** Porter D. for Rule-Based Systems Antoni Ligeza, 2006-01-25 Thinking in terms of facts and rules is perhaps one of the most common ways of approaching problem definition and problem solving both in everyday life and under more formal circumstances The best known set of rules the Ten Commandments have been accompanying us since the times of Moses the Decalogue proved to be simple but powerful concise and universal It is logically consistent and complete There are also many other attempts to impose rule based regulations in almost all areas of life including professional work education medical services taxes etc Some most typical examples may include various codes e g legal or traffic code regulations especially military ones and many systems of customary or informal rules The universal nature of rule based formulation of behavior or inference principles follows from the concept of rules being a simple and intuitive yet powerful concept of very high expressive power Moreover rules as such encode in fact functional aspects of behavior and can be used for modeling numerous phenomena

Bhowmick, Josef Küng, Roland Wagner, 2008-08-27 This book constitutes the refereed proceedings of the 19th International Conference on Database and Expert Systems Applications DEXA 2008 held in Turin Italy in September 2008 The 74 revised full papers presented together with 1 invited paper were carefully reviewed and selected from 208 submissions The papers are organized in topical sections on data privacy temporal spatial and high dimensional databases semantic Web and ontologies query processing Web and information retrieval mobile data and information data and information streams data mining algorithms multimedia databases data mining systems data warehousing OLAP data and information semantics XML databases applications of database information and decision support systems and schema process and knowledge modelling and evolution **AI '88** Christopher J. Barter, Michael J. Brooks, 1990-03-07 The broad objective of this conference series is to bring business industry and researchers together to consider the current activities and future potential of artificial intelligence encompassing both practical and theoretical issues Many papers were submitted including some from Canada France UK USA Sweden Italy and Thailand *Issues in Agent Communication* Frank Dignum, Mark Greaves, 2006-12-31 A first attempt to develop a standardized agent communication language ACL resulted in KQML probably the most widely used such language However a lot of technical work remains to be done Even worse so far there seems to be little consensus on the basics of agent communication and there is no clear understanding of the semantics of individual speech acts or even of the basic concepts that should be used to define the semantics This book documents two workshops on communication in MAS held in 1999 one on Specifying and Implementing Conversation Policies SICP and the other in Agent Communication Languages and presents the current state of the art of research in the field A detailed introductory overview by the volume editors highlights a number of issues that play an important role in agent communication Intelligent Systems for Engineering Ram D. that it is so Sri Krishna Bhagavadgita BACKGROUND The use of computers has led to significant productivity increases in the engineering industry Most of the computer aided engineering applications were restricted to algorithmic computations such as finite element programs and circuit analysis programs However a number of problems encountered in engineering are not amenable to purely algorithmic solutions These problems are often ill structured the term ill structured problems is used here to denote problems that do not have a clearly defined algorithmic solution An experienced engineer deals with these ill structured problems using his/her judgment and experience The knowledge based systems KBS technology which emerged out of research in artificial intelligence AI offers a methodology to solve these ill structured engineering problems The emergence of the KBS technology can be viewed as the knowledge revolution other important events that led to increased productivity are the industrial revolution 17th century the invention of the transistor and associated developments first half of the 20th century and the world wide web towards the end of the 20th century Kurzweil in a lecture at MIT on December 3 1987 linked the progress of automation to two industrial revolutions the first industrial revolution leveraged our physical capabilities whereas the second industrial revolution the knowledge revolution is expected leverage our mental capabilities

Knowledge-Based System Diagnosis, Supervision, and Control S.G. Tzafestas, 2013-11-22 It is in the area of Systems Diagnosis Supervision and Control that Knowledge Based Techniques have had their most significant impact in recent years In this volume Spyros Tzafestas has ably put together the current state of the art of the application of Artificial Intelligence concepts to problems of Systems Diagnosis All the authors in this edited work are distinguished internationally recognized experts on various aspects of Artificial Intelligence and its applications and the coverage of the field that they provide is both readable and authoritative The sixteen chapters break down in a natural way into three broad categories i.e. a introduction to the applications of Expert Systems in Engineering b Knowledge based systems architectures models and techniques for fault diagnosis supervision and real time control and finally c applications and case studies in three specific areas namely Manufacturing Chemical Processes and Communications Networks The final chapter provides a comprehensive survey of the field with an extensive bibliography The mix of original scientific articles tutorial and survey papers makes this collection a very timely and valuable addition to the literature in this important field
