

7 easy ways to make your computer run faster

Update your computer

Running updates regularly can remove bugs that prevent your system from working efficiently.

Shut down/ restart regularly

Turning off your computer and starting fresh deletes temporary files and helps it reboot properly.

Disable auto-launch programs

Open Startup Apps. Activate apps that you use often, and turn-off those that you don't.

Organize your desktop

Keep your files organized in folders. This saves memory, plus you'll find your files easier!

If you've tried these tips and none of them worked, have your computer checked. If your computer is relatively new (1-3 years), the cost of repairs may be worth it. But if your computer is older than 5 years, it may be more cost-effective to buy a new one.

Close your tabs

Having multiple webpages open can slow down your computer. Stick to pages you're actively using to conserve memory.

Delete files and programs

Delete unused programs. Clear up your recycle bin, temporary files, and browsing history. Move large files to a removable drive or online storage.

Upgrade your RAM

Your computer's speed relies on RAM or Random Access Memory. To upgrade it, you can buy a RAM module or strip. Ask for help from a technician and have it installed.
