**Let the River Run Silver Again!** Sandy Burk,2005 Let the River Run Silver Again is an environmental conservation success story for students ages 10 to 15 and the teachers parents and others who mentor them It is a source of information and insight for those who want to learn about and benefit from the success of others as well as those who are interested in developing environmental restoration programs in their own watershed The full color format presents engaging action packed photographs along with maps graphs and original art that extends the information presented in multiple directions and dimensions The greater part of the book follows students from one elementary school in Maryland as they take part over a period of nine years in a major regional conservation initiative to restore populations of an important fish the American shad to the Chesapeake Bay watershed and to allow the shad to breach numerous dams while migrating to many of their former spawning areas Numerous private organizations and local state and federal agencies contributed to the program which was indeed successful but the emphasis in this book is upon the students their teachers and their community as they collectively committed to the project followed through with this commitment and benefited in myriad ways from the success of the project The narrative of the students projects is presented in an energetic style and at a level that will both engage and inform other readers of the same age A short section at the end of the book draws upon the insights offered by the students story while identifying pathways for students and their mentors to the development and implementation of water wetland and watershed restoration projects that could be implemented in other locations and circumstances The students experience thus serves as a model and inspiration for student or youth group conservation projects anywhere

*Where the Rivers Run North* Sam Morton,2014-06-03 ONE HUNDRED THOUSAND TRAVELERS had crossed the Oregon Trail during the gold rush of 1849 Even the most backwoods warrior understood what that meant disease death and conflict with the whites As a result of the Treaty of 1851 some Indians were convinced that the country to the north called Absaraka might be a better option for a home range At the very least it held the promise of less trouble from the whites The danger from other tribes was another matter

**The River Runs Black** Elizabeth C. Economy,2011-01-15 China s spectacular economic growth over the past two decades has dramatically depleted the country s natural resources and produced skyrocketing rates of pollution Environmental degradation in China has also contributed to significant public health problems mass migration economic loss and social unrest In *The River Runs Black* Elizabeth C Economy examines China s growing environmental crisis and its implications for the country s future development Drawing on historical research case studies and interviews with officials scholars and activists in China the author traces the economic and political roots of China s environmental challenge and the evolution of the leadership s response She argues that China s current approach to

environmental protection mirrors the one embraced for economic development devolving authority to local officials opening the door to private actors and inviting participation from the international community while retaining only weak central control The result has been a patchwork of environmental protection in which a few wealthy regions with strong leaders and international ties improve their local environments while most of the country continues to deteriorate sometimes suffering irrevocable damage Economy compares China's response with the experience of other societies and sketches out several possible futures for the country This second edition is updated with information about events during the past five years covering China's tumultuous transformation of its economy and its landscape as it deals with the political implications of this behavior as viewed by an international community ever more concerned about climate change and dwindling energy resources

**The Emerald Mile** Kevin Fedarko, 2013-05-07 From one of Outside magazine's Literary All Stars comes the thrilling true tale of the fastest boat ride ever through the Grand Canyon atop the legendary Colorado River flood of 1983 In the spring of 1983 massive flooding along the length of the Colorado River confronted a team of engineers at the Glen Canyon Dam with an unprecedented emergency that may have resulted in the most catastrophic dam failure in history In the midst of this crisis the decision to launch a small wooden dory named *The Emerald Mile* at the head of the Grand Canyon just fifteen miles downstream from the Glen Canyon Dam seemed not just odd but downright suicidal *The Emerald Mile* at one time slated to be destroyed was rescued and brought back to life by Kenton Grua the man at the oars who intended to use this flood as a kind of hydraulic sling shot The goal was to nail the all time record for the fastest boat ever propelled by oar by motor or by the grace of God himself through the heart of the Grand Canyon atop the Colorado River from Lee's Ferry to Lake Mead Did he survive Just barely Now this remarkable epic feat unfolds here in *The Emerald Mile*
