On the Origin of Species 1st Edition Charles Darwin,2023-08-20 When on board H M S Beagle as naturalist I was much struck with certain facts in the distribution of the inhabitants of South America and in the geological relations of the present to the past inhabitants of that continent These facts seemed to me to throw some light on the origin of species that mystery of mysteries as it has been called by one of our greatest philosophers On my return home it occurred to me in 1837 that something might perhaps be made out on this question by patiently accumulating and reflecting on all sorts of facts which could possibly have any bearing on it After five years work I allowed myself to speculate on the subject and drew up some short notes these I enlarged in 1844 into a sketch of the conclusions which then seemed to me probable from that period to the present day I have steadily pursued the same object I hope that I

may be excused for entering on these personal details as I give them to show that I have not been hasty in coming to a decision My work is now nearly finished but as it will take me two or three more years to complete it and as my health is far from strong I have been urged to publish this Abstract I have more especially been induced to do this as Mr Wallace who is now studying the natural history of the Malay archipelago has arrived at almost exactly the same general conclusions that I have on the origin of species Last year he sent to me a memoir on this subject with a request that I would forward it to Sir Charles Lyell who sent it to the Linnean Society and it is published in the third volume of the Journal of that Society Sir C Lyell and Dr Hooker who both knew of my work the latter having read my sketch of 1844 honoured me by thinking it advisable to publish with Mr Wallace s excellent memoir some brief extracts from my manuscripts This Abstract which I now publish must necessarily be imperfect I cannot here give references and authorities for my several statements and I must trust to the reader reposing some confidence in my accuracy No doubt errors will have crept in though I hope I have always been cautious in trusting to good authorities alone I can here give only the general conclusions at which I have arrived with a few facts in illustration but which I hope in most cases will suffice No one can feel more sensible than I do of the necessity of hereafter publishing in detail all the facts with references on which my conclusions have been grounded and I hope in a future work to do this For I am well aware that scarcely a single point is discussed in this volume on which facts cannot be adduced often apparently leading to conclusions directly opposite to those at which I have arrived A fair result can be obtained only by fully stating and balancing the facts and arguments on both sides of each question and this cannot possibly be here done I much regret that want of space prevents my having the satisfaction of acknowledging the generous assistance which I have received from very many naturalists some of them personally unknown to me I cannot however let this opportunity pass without expressing my deep obligations to Dr Hooker who for the last fifteen years has aided me in every possible way by his large stores of knowledge and his excellent judgment In considering the Origin of Species it is quite conceivable that a naturalist reflecting on the mutual affinities of organic beings on their embryological relations their geographical distribution geological succession and other such facts might come to the conclusion that each species had not been independently created but had descended like varieties from other species Nevertheless such a conclusion even if well founded would be unsatisfactory until it could be shown how the innumerable species inhabiting this world have been modified so as to acquire that perfection of structure and coadaptation which most justly excites our admiration Naturalists continually refer to external conditions such as climate food etc as the only possible cause of variation In one very limited sense as we shall hereafter see this may be true but it is preposterous to attribute to mere external conditions the structure for instance of the woodpecker with its feet tail beak and tongue so admirably adapted to catch insects under the bark of trees In the case of the misseltoe which draws its nourishment from certain trees which has seeds that must be transported by certain birds and which has flowers with separate sexes absolutely requiring the agency of certain insects to bring pollen

from one flower to the other it is equally preposterous to account for the structure of this parasite with its relations to several distinct organic beings by the effects of external conditions or of habit or of the volition of the plant itself The author of the Vestiges of Creation would I presume say that after a certain unknown number of generations some bird had given birth to a woodpecker and some plant to the misseltoe and that these had been produced perfect as we now see them but this assumption seems to me to be no explanation for it leaves the case of the coadaptations of organic beings to each other and to their physical conditions of life untouched and unexplained It is therefore of the highest importance to gain a clear insight into the means of modification and coadaptation At the commencement of my observations it seemed to me probable that a careful study of domesticated animals and of cultivated plants would offer the best chance of making out this obscure problem Nor have I been disappointed in this and in all other perplexing cases I have invariably found that our knowledge imperfect though it be of variation under domestication afforded the best and safest clue I may venture to express my conviction of the high value of such studies although they have been very commonly neglected by naturalists From these considerations I shall devote the first chapter of this Abstract to Variation under Domestication We shall thus see that a large amount of hereditary modification is at least possible and what is equally or more important we shall see how great is the power of man in accumulating by his Selection successive slight variations I will then pass on to the variability of species in a state of nature but I shall unfortunately be compelled to treat this subject far too briefly as it can be treated properly only by giving long catalogues of facts We shall however be enabled to discuss what circumstances are most favourable to variation In the next chapter the Struggle for Existence amongst all organic beings throughout the world which inevitably follows from their high geometrical powers of increase will be treated of This is the doctrine of Malthus applied to the whole animal and vegetable kingdoms As many more individuals of each species are born than can possibly survive and as consequently there is a frequently recurring struggle for existence it follows that any being if it vary however slightly in any manner profitable to itself under the complex and sometimes varying conditions of life will have a better chance of surviving and thus be naturally selected From the strong principle of inheritance any selected variety will tend to propagate its new and modified form This fundamental subject of Natural Selection will be treated at some length in the fourth chapter and we shall then see how Natural Selection almost inevitably causes much Extinction of the less improved forms of life and induces what I have called Divergence of Character In the next chapter I shall discuss the complex and little known laws of variation and of correlation of growth In the four succeeding chapters the most apparent and gravest difficulties on the theory will be given namely first the difficulties of transitions or in understanding how a simple being or a simple organ can be changed and perfected into a highly developed being or elaborately constructed organ secondly the subject of Instinct or the mental powers of animals thirdly Hybridism or the infertility of species and the fertility of varieties when intercrossed and fourthly the imperfection of the Geological Record In the next chapter I shall consider the geological succession of organic beings throughout time in the

eleventh and twelfth their geographical distribution throughout space in the thirteenth their classification or mutual affinities both when mature and in an embryonic condition In the last chapter I shall give a brief recapitulation of the whole work and a few concluding remarks No one ought to feel surprise at much remaining as yet unexplained in regard to the origin of species and varieties if he makes due allowance for our profound ignorance in regard to the mutual relations of all the beings which live around us Who can explain why one species ranges widely and is very numerous and why another allied species has a narrow range and is rare Yet these relations are of the highest importance for they determine the present welfare and as I believe the future success and modification of every inhabitant of this world Still less do we know of the mutual relations of the innumerable inhabitants of the world during the many past geological epochs in its history Although much remains obscure and will long remain obscure I can entertain no doubt after the most deliberate study and dispassionate judgment of which I am capable that the view which most naturalists entertain and which I formerly entertained namely that each species has been independently created is erroneous I am fully convinced that species are not immutable but that those belonging to what are called the same genera are lineal descendants of some other and generally extinct species in the same manner as the acknowledged varieties of any one species are the descendants of that species Furthermore I am convinced that Natural Selection has been the main but not exclusive means of modification

FROM THE BOOKS Circulars, Papers and Annual Meeting of the Ohio Commandery of the Military Order of the Loyal Legion of the United States Military Order of the Loyal Legion of the United States. Ohio Commandery, 1887 **Had, Hoodwinked and Bamboozled (willie Lynch is Running Wild in the Democratic Party)!! and He Has the Black Community, Just where He Wants Them!!** Evang. G. E. McTyre, Evangelist Evang. G. E., BHG McTyre BA, 2006 In 1712 a slave owner from the West Indies by the name of Willie Lynch came to Virginia at the request of slave owners in that state and others to teach them how to better control and get top production out of their black slaves What Mr Lynch told them and the steps he outlined guaranteed the faithfulness of the slaves to their masters in all situations Today those same principles are being used by the Democratic party to keep the black community beholden to and trusting only the Democrats Thus they have become the very thing they hated centuries ago slaves with the Democrats as their masters **Room for Good Things to Run Wild** Josh Nadeau, 2025-02-11 Room for Good Things to Run Wild is the antidote to widespread Christian malaise If you feel like life is happening to you that your faith has been reduced to trite platitudes and that no matter how many new things you try you still end up with a dissatisfying Christian life this book offers relief from the mediocrity of Christian living through the sacred and satisfying journey of becoming an every day saint After spending too many days staring at the hamster cage of his uninspired life through the bottom of a glass of Scotch Josh Nadeau knew there were only 2 ways left to go further down or finally up Disillusioned by his faith and disenchanted by the world around him Josh chose up out of a desperation to discover the Jesus who had formed the saints of old Steeped in literature and doctrine art and raw daily life and accompanied by original

illustrations and living liturgy this book will bring you on the journey back to an embodied theology that understands that we know not just with our minds but also with our bodies From Canada to England to Ireland and Spain Josh follows the Jesus Way teaching you how to be just as honest about the pain of your life as the pleasure of your life Rediscover the full and wild world that God has created for you in the way He has created you to experience it Room for Good Things to Run Wild is a call into the Holy Ordinary a new way to see that wakes the soul and satisfies the body *I Will Run Wild* Thomas McKelvey Cleaver,2020-09-17 In many popular histories of the Pacific War the period from the Japanese attack at Pearl Harbor to the US victory at Midway is often passed over because it is seen as a period of darkness Indeed it is easy to see the period as one of unmitigated disaster for the Allies with the fall of the Philippines Malaya Burma and the Dutch East Indies and the wholesale retreat and humiliation at the hands of Japan throughout Southeast Asia However there are also stories of courage and determination in the face of overwhelming odds the stand of the Marines at Wake Island the fighting retreat in the Philippines that forced the Japanese to take 140 days to accomplish what they had expected would take 50 the fight against the odds at Singapore and over Java the stirring tale of the American Volunteer Group in China and the beginnings of resistance to further Japanese expansion In these events there are many individual stories that have either not been told or not been told widely which are every bit as gripping as the stories associated with the turning tide after Midway *I Will Run Wild* draws on extensive first hand accounts and fascinating new analysis to tell the story of Americans British Dutch Australians and New Zealanders taken by surprise from Pearl Harbor to Singapore that first Sunday of December 1941 who went on to fight with what they had at hand against a stronger and better prepared foe and in so doing built the basis for a reversal of fortune and an eventual victory **Run Wild** Boff Whalley,2012-07-05 Boff Whalley just likes running the places it takes him the moments of exhilaration and snapshots of natural beauty that he adds to his mental album This is not a man who signs up to big city marathons and pounds the pavements With his down to earth voice and a great sense of humour Boff writes about how running brings a real world of discovery and adventure from reaching the top of a mountain with the sun at your back and moon in front creating two shadows to running up Mt Fuji on a break from work For Boff running is about freedom experiencing of the world your place in it and generally just enjoying yourself Running is a way to get back to that simplest of relationships the one between our feet and the earth **Investigating the Social World with SPSS Student Version 14.0** Russell Schutt,2006-03-06 Praise for the Fourth Edition I think this volume is a good textbook and if I were teaching a research methods subject I would consider using it as a core text The extensive study aids are a particularly attractive aspect of the book as a teaching pool Qualitative Research Journal The continually updated and expanded *Investigating the Social World* now in its Fifth Edition is written so that the doing of social research is closely and consistently linked to important social issues demonstrating not only the value of research but also how technique and substance are intimately related The text offers guides for critiquing research articles exercises for applying research skills

and the examples of analyzing and reporting social data provide instructors with key supports for effective teaching Ethical concerns and ethical decision making are treated in tandem with each study of specific methods and an emphasis on how to do research is joined with an equal emphasis on giving students the critical skills necessary to evaluate research done by others
