## **Rural And Farming Systems Analysis European Perspectives:**

*Rural and Farming Systems Analysis* John Barry Dent, Murray J McGregor, 1994 The Farming Systems Research and Extension approach adopts a multidimensional perspective and has been widely used to bring about rural change in many developing countries The approach has traditionally been less used in Europe where research has tended to concentrate on increasing production However with the current emphasis within the European Union on restricting surpluses and on environmental and social protection circumstances are more appropriate to the farming systems approach Changes to rural infrastructures and agricultural production in Central and Eastern Europe may also favor the approach This book is the first to define the issues of farming systems research as they might be applied within a European context and extended to rural systems as a whole Consisting of 27 chapters it is divided into five parts covering conceptual background contextual setting alternative production systems understanding farm households and systems methodologies Contributions are included from the UK Ireland France Germany Spain Portugal Denmark Netherlands Finland Estonia and Greece The book is aimed at a wide range of readers in agricultural economics and rural studies

**The Sustainability of Rural Systems** I.R. Bowler, C.R. Bryant, C. Cocklin, 2013-06-29 Economy society and environment comprise the three main dimensions of sustainable development but too often they are considered separately This book by comparison examines the interaction of the three dimensions in the context of rural systems embracing a wide range of topics including globalisation and reregulation in sustainable food production conservation and sustainability the development of sustainable rural communities and sustainable rural urban interaction An international team of geographers drawn from the International Geographical Union's Commission on The Sustainability of Rural Systems summarises the basis of unsustainable rural development in these topics the remedial policies

being pursued and their own evaluations of the policies Rather than deal just with generalisations their analyses are illustrated by detailed case studies drawn from a variety of rural systems in both developed and developing countries

**A History of Farming Systems Research** Michael P. Collinson, 2000 This book provides a detailed history of farming systems research FSR While it includes the application of FSR to developed country agriculture its main focus is on FSR in its original role with small scale resource poor farmers in less developed countries There are some 40 contributions from nearly 50 contributors from 20 countries illustrating both the diversity and yet the coherence of FSR The five parts of the book cover 1 FSR understanding farmers and their farming FSR origins and perspectives understanding farming systems 2 the applications of farming systems research FSR in technology choice and development FSR in extension and policy formulation 3 institutional commitment to FSR FSR some institutional experiences in national agricultural research dimensions of the organization of FSR training for FSR 4 FSR the professional dimension regional and international associations FSR and the professional disciplines and 5 cutting edge methods abiding issues and the future for FSR

**Understanding Options for Agricultural Production** G.Y. Tsuji, G. Hoogenboom, P.K. Thornton, 2013-03-14 The first premise of this book is that farmers need access to options for improving their situation In agricultural terms these options might be management alternatives or different crops to grow that can stabilize or increase household income that reduce soil degradation and dependence on off farm inputs or that exploit local market opportunities Farmers need a facilitating environment in which affordable credit is available if needed in which policies are conducive to judicious management of natural resources and in which costs and prices of production are stable Another key ingredient of this facilitating environment is information an understanding of which options are viable how these operate at the farm level and what their impact may be on the things that farmers perceive as being important The second premise is that systems analysis and simulation have an important role to play in fostering this understanding of options traditional field experimentation being time consuming and costly This book summarizes the activities of the International Benchmark Sites Network for Agrotechnology Transfer IBSNAT project an international initiative funded by the United States Agency for International Development USAID IBSNAT was an attempt to demonstrate the effectiveness of understanding options through systems analysis and simulation for the ultimate benefit of farm households in the tropics and subtropics The idea for the book was first suggested at one of the last IBSNAT group meetings held at the University of Hawaii in 1993

**Intensive Agriculture and Sustainability** Glen C. Filson, 2005-07 As globalization restructures agriculture and rural communities the impacts of increasingly industrialized farming make interdisciplinary analyses of the linkages among the social environmental and economic aspects of farming ever more vital This collection analyzes the reasons for the public's scrutiny of intensive agriculture and the prospects for sustainable farming now that concerns are mounting about food quality manure runoff greenhouse gases extra label use of antibiotics pesticide use and rural conflict Intensive Agriculture and Sustainability outlines the advantages of Farming Systems Analysis

for understanding the implications of modern intensive agriculture This book describes some of the major environmental and social problems connected with intensive farming outlines a framework for analyzing its sustainability discusses key linkages among the environmental economic and social indicators outlines modelling trade offs between profitability and environmental sustainability and then analyzes various farming systems using case studies The authors conclude that rural conflict and government regulation are likely to continue unless the public joins with farmers to help fund stewardship practices and stabilize farm incomes This book will appeal to field practitioners agricultural and environmental policy analysts geographers and those scholars and students who are tired of the pervasive production oriented disciplinary focus that typifies most agricultural research      *Crop Science* P. C. Struik, 2001-09-28 This text includes keynote invited papers from the Third International Crop Science Congress held in Hamburg Germany in August 2000 The papers provide an overview of the major issues confronting crop science today and in the future      The Routledge Companion to Production and Operations Management Martin K. Starr, Sushil K. Gupta, 2017-03-27 This remarkable volume highlights the importance of Production and Operations Management POM as a field of study and research contributing to substantial business and social growth The editors emphasize how POM works with a range of systems agriculture disaster management e commerce healthcare hospitality military systems not for profit retail sports sustainability telecommunications and transport and how it contributes to the growth of each Martin K Starr and Sushil K Gupta gather an international team of experts to provide researchers and students with a panoramic vision of the field Divided into eight parts the book presents the history of POM and establishes the foundation upon which POM has been built while also revisiting and revitalizing topics that have long been essential It examines the significance of processes and projects to the fundamental growth of the POM field Critical emerging themes and new research are examined with open minds and this is followed by opportunities to interface with other business functions Finally the next era is discussed in ways that combine practical skill with philosophy in its analysis of POM including traditional and nontraditional applications before concluding with the editors thoughts on the future of the discipline Students of POM will find this a comprehensive definitive resource on the state of the discipline and its future directions      *Cow Up a Tree* LEARN Group, 2000 Western societies are calling for speedy change in agriculture and the agrifood industries to incorporate new quality criteria into the goods they produce To promote these changes what scientists must develop are not universally implementable technical solutions but self diagnosis methods to be used by agricultural producers and their advisors They also need to evolve new procedures for research intervention in collective organisations There is a need for new individual and collective learning and organisation processes based on transdisciplinarity and co learning among researchers development professionals decision makers and farmers In this book scientists from ten industrialised countries describe and reflect on their theoretical and practical experience of the different forms of learning they experimented with      *Applications of Systems Approaches at the Farm and Regional Levels* P.S. Teng, M.J.

Kropff, H.F.M. ten Berge, J.B. Dent, F.P. Lansigan, H.H. Van Laar, 2012-12-06 Systems approaches for agricultural development are needed to determine rational strategies for the role of agriculture in national development Mathematical models and computer simulation provide objective tools for applying science to determine and evaluate options for resource management at field farm and regional scales However these tools would not be fully utilizable without incorporating social and economic dimensions into their application The second international symposium Systems Approaches for Agricultural Development held in Los Ba os 6 8 December 1995 fostered this link between the bio physical sciences and the social sciences in the choice of keynote papers and oral presentations a selection of which is included in this book The book s contents further reflect how systems approaches have definitely moved beyond the research mode into the application mode The large number and high quality of interdisciplinary research projects reported from different parts of the globe to determine land use options that will meet multiple goals and yet sustain natural resource bases is a key indicator of this coming of age At the farm level where trade off decisions between processes and products commodities feature strongly much progress is also evident in the development of systems based tools for decision making This book will be of particular interest to all agricultural scientists and planners as well as students interested in multidisciplinary and holistic approaches for agricultural development

**Agricultural Use of Groundwater** Cesare Dosi,2001-05-31 Groundwater is endangered and polluted in several ways Conservation and better management of this invisible resource should be a key ingredient of sustainable water policies This is especially true in areas such as many Mediterranean regions which are already exposed to scarcity problems and which are likely to experience increasing competition between freshwater uses and users Agriculture is an important user of groundwater not only in terms of abstractions but also in terms of generation and release of pollutants Agricultural policies traditionally directed towards other objectives are beginning to pay more attention to environmental considerations However more effective initiatives are required to reduce the pressure upon groundwater resources and to achieve a better integration between agricultural and environmental policies This book has been developed from three workshops held as part of the EU Concerted Action SAGA Sustainable Agricultural Use of Aquifers in Southern Europe Integration between Agricultural and Water Management Policies FAIR5 CT97 3673 The Concerted Action and the workshops brought together researchers working in different but complementary fields in order to get a picture of the state of the art about interlinkages between agriculture and groundwater as well a critical review of alternative regulatory approaches and policy instruments aimed at improving groundwater management
