A user friendly guide to developing groundwater for rural water supplies in developing countries It provides information on simple effective techniques for siting wells and boreholes assessing resource sustainability constructing and testing the yield of boreholes and wells and monitoring groundwater quality      Rural Water Systems for Multiple Uses and Livelihood Security M. Dinesh Kumar, Yusuf Kabir, A. J. James, 2016-05-03 Rural Water Systems for Multiple Uses and Livelihood Security covers the technological institutional and policy choices for building rural water supply systems that are sustainable from physical economic and ecological points of view in developing countries While there is abundant theoretical discourse on designing village water supply schemes as multiple use systems there is too little understanding of the type of water needs in rural households how they vary across socio economic and climatic settings the extent to which these needs are met by the existing single use water supply schemes and what mechanisms exist to take care of unmet demands The case studies presented in the book from different agro ecological regions quantify these benefits under different agro ecological settings also examining the economic and environmental trade offs in maximizing benefits This book demonstrates how various physical and socio economic processes alter the hydrology of tanks in rural settings thereby affecting their performance also including quantitative criteria that can be used to select tanks suitable for rehabilitation Covers interdisciplinary topics deftly interwoven in the rural context of varying geo climatic and socioeconomic situations of people in developing areas Presents methodologies for quantifying the multiple water use benefits from wetlands and case studies from different agro ecologies using these methodologies to help frame appropriate policies Provides analysis of the climatic and socioeconomic factors responsible for changes in hydrology of multiple use wetlands in order to help target multiple use water bodies for rehabilitation Includes implementable models for converting single use water supply systems into multiple use systems

**Rural Water Supply in Africa** Peter Harvey, Bob Reed, 2004 This book is designed to assist those responsible for planning implementing and supporting rural water supply programmes to increase sustainability      **A Bucket of Water** Kanayo F. Carter, 2021      Rural Water Supply and Sanitation Forrest Blythe Wright, 1939      **Transforming Rural Water Governance** Sarah T Romano, 2019-11-05 The most acute water crises occur in everyday contexts in impoverished rural and urban areas across the Global South While they rarely make headlines these crises characterized by inequitable access to sufficient and clean water affect over one billion people globally What is less known though is that millions of these same global citizens are at the forefront of responding to the challenges of water

privatization climate change deforestation mega hydraulic projects and other threats to accessing water as a critical resource In *Transforming Rural Water Governance* Sarah T Romano explains the bottom up development and political impact of community based water and sanitation committees CAPS in Nicaragua Romano traces the evolution of CAPS from rural resource management associations into a national political force through grassroots organizing and strategic alliances Resource management and service provision is inherently political charging residents fees for service determining rules for household water shutoffs and reconnections and negotiating access to water sources with local property owners constitute just a few of the highly political endeavors resource management associations like CAPS undertake as part of their day to day work in their communities Yet for decades in Nicaragua this local work did not reflect political activism In the mid 2000s CAPS collective push for social change propelled them onto a national stage and into new roles as they demanded recognition from the government Romano argues that the transformation of Nicaragua s CAPS into political actors is a promising example of the pursuit of sustainable and equitable water governance particularly in Latin America *Transforming Rural Water Governance* demonstrates that when activism informs public policy processes the outcome is more inclusive governance and the potential for greater social and environmental justice
