Berger,Anna Remington,Yael Leitner,Alan Leviton,2015-06-16 Early onset and enduring developmental deficits in attention especially if combined with increased hyperactivity and impulsivity may result in constant impairments in multiple domains of personal life The full spectrum of symptoms is characterized by a persistent pattern of inattention and or hyperactivity impulsivity which is maladaptive and inconsistent with a comparable level of developmental age known as Attention Deficit Hyperactivity Disorder ADHD ADHD is considered one of the most common neurobehavioral disorders and of childhood and among the most prevalent chronic health conditions Given the wide heterogeneity and complex manifestations of the disorder there is an importance in a developmental perspective that views ADHD as a multi factorial disorder with multiple causal processes and pathways The symptoms of ADHD should be cast not as static or fixed neurobehavioral deficits but rather in terms of underlying developmental processes Even experienced professional might minimize the prevalence of a

disorder among certain groups of patients Therefore the existence of attention disorders might become transparent for both the patient and the professional This might lead to a non accurate diagnosis harm the treatment aspects and has potential non beneficial prognostic aspects The developmental approach can provide predictions as to how characteristics associated with attention develop over time and how multiple risk and protective factors transact to impact it s development as well as the development of a broad range of associated co morbid features Among children with mental retardation autistic spectrum disorders children who were born premature born with low birth weight as well as among those who suffer from chronic disorders such as epilepsy diabetes chronic kidney disease or asthma as well as among otherwise healthy preschoolers the assessment of attention performance might be very challenging In this research topic we explore the latest cutting edge research on the biological and neural pathways as well as on psychosocial and behavioral correlates of brain development and attention spectrum In doing so we aim to highlight what is currently known regarding this new conceptualization of attention as a spectrum the mechanisms underlying this spectrum and where this field is headed in terms of developing our understanding of the link between brain development and attention performance

Silicon-Germanium Carbon Alloys S. Pantellides, 2002-07-26 Carbon C and Silicon Germanium SiGe work like a magic sauce At least in small concentrations they make everything taste better It is remarkable enough that SiGe a new material and the heterobipolar transistor a new device appear on the brink of impacting the exploding wireless market The addition of C to SiGe albeit in small concentrations looks to have breakthrough potential Here at last is proof that materials science can put a rocket booster on the silicon mind the silicon transistor Scientific excitement arises as always from the new possibilities a multicomponent materials system offers Bandgaps can be changed strains can be tuned and properties can be tailored This is catnip to the materials scientist The wide array of techniques applied here to the SiGeC system bear testimony to the ingenious approaches now available for mastering the complexities of new materials **Curtis's Botanical Magazine, Or,**
