Rufus The Red Kangaroo:

Rufus the Red Kangaroo Jill Morris, 1970 The story of a red kangaroo and its life in the hot dry regions of desert around Ayers Rock *The Red Kangaroo in Central Australia* Alan Newsome, Thomas Newsome, 2016-07-01 The red kangaroo is at the heart of Australia's ecological identity It is Australia's largest terrestrial land mammal the largest extant marsupial and the only kangaroo truly restricted to Australia's arid interior Almost nothing was known about the ecology of the red kangaroo when Alan Newsome began to study it in 1957 He discovered how droughts affect reproduction why red kangaroos favour different habitats during droughts from those after rains and that unprecedented explosions in red kangaroo numbers were caused by changes to the landscape wrought by graziers Most importantly he realised the possibilities of enriching western science with Indigenous knowledge a feat recognised today as one of the greatest achievements of his career First drafted in 1975 and now revised and prepared for publication by his son The Red Kangaroo in Central Australia captures Alan's thoughts as a young ecologist working in Central Australia in the 1950s and 1960s It will inspire a new generation of scientists to explore Australia's vast interior and study the extraordinary adaptations of its endemic mammals It will also appeal to readers of other classics of Australian natural history such as Francis Ratcliffe's Flying Fox and Drifting Sand and Harry Frith's The Mallee Fowl The Bird that Builds an Incubator **Macropods** Graeme Coulson, Mark Eldridge, 2010-02-03 This book covers the proceedings of a major 2006 symposium on macropods that brought together the many recent advances in the biology of this diverse group of marsupials including research on some of the much neglected macropods such as the antilopine wallaroo the swamp wallaby and tree kangaroos More than 80 authors have contributed 32 chapters which are grouped into four themes genetics reproduction and development morphology and physiology ecology and management The book examines such topics as embryonic development immune function molar progression and mesial drift locomotory energetics non shivering thermogenesis mycophagy habitat preferences population dynamics juvenile mortality in drought harvesting overabundant species road kills fertility control threatened species cross fostering translocation and reintroduction It also highlights the application of new techniques from genomics to GIS Macropods is an important reference for academics and students researchers in molecular and ecological sciences wildlife and park managers and naturalists *The World Book Encyclopedia of Science* World Book, Inc, 1986 *Life of Marsupials* Hugh Tyndale-Biscoe, 2005-04-22 Over the past half a century research has revealed that marsupials far from being second class mammals have adaptations for particular ways of life quite equal to their placental counterparts Despite long separate evolution there are extraordinary similarities in which marsupials have solved the challenges of living in such environments as deserts alpine snowfields or tropical rainforests Some can live on grass some on pollen and others on leaves some can glide some can swim and others hop with extraordinary efficiency In *Life of Marsupials* one of the world's leading experts explores the biology and evolution of this unusual group with their extraordinary diversity of forms around the world in
