Fluid Mechanics of Mixing R. King, 2013-03-09 This volume is a selection of the material presented at the 7th European Mixing Congress It is concerned exclusively with mixing in circular section vessels using centrally mounted paddles or similar impellers The contents are arranged under three classifications Modelling of Mixing Processes Mixing Operations and Experimental Techniques The classifications result in the original material appearing in a different order to that of the Congress This arrangement is intended to assist the reader in identifying the topic area by function or application rather than by technology In this book the section on Modelling contains papers which focus on the representation of the mixing process whether by equation scale up criteria or fluid dynamic simulation Similarly Mixing Operations are concerned with the application or function of the mixing process such as mass transfer heat transfer or mixing time Experimental Techniques addresses the tools the researcher needs to use at the data gathering experimental stage It collects together advances made in the various methods used by some of the foremost researchers and indicates those areas still in need of additional instrumentation or methods of data reduction The book is intended for researchers designers and users of mixing equipment and for those planning research and development programmes and who wish to keep up to date with advances in the basic technology and its applications

Bioreaction Engineering Principles John Villadsen, Jens Nielsen, Gunnar Lidén, 2011-07-12 The present text is a complete revision of the 2nd edition from 2003 of the book with the same title In recognition of the fast pace at which biotechnology is moving we have rewritten several chapters to include new scientific progress in the field from 2000 to 2010 More important we have changed the focus of the book to support its use not only in universities but also as a guide to design new processes and equipment in the bio industry A new chapter has been included on the prospects of the bio refinery to replace many of the oil and gas based processes for production of especially bulk chemicals This chapter also serves to make

students in Chemical Engineering and in the Bio Sciences enthusiastic about the whole research field As in previous editions we hope that the book can be used as textbook for classes even at the undergraduate level where chemical engineering students come to work side by side with students from biochemistry and microbiology To help the chemical engineering students Chapter 1 includes a brief review of the most important parts of microbial metabolism In our opinion this review is sufficient to understand microbial physiology at a sufficiently high level to profit from the rest of the book Likewise the bio students will not be overwhelmed by mathematics but since the objective of the book is to teach quantitative process analysis and process design at a hands on level some mathematics and model analysis is needed We hope that the about 100 detailed examples and text notes together with many instructive problems will be sufficient to illustrate how model analysis is used also in Bio reaction Engineering
