

Sources of Magnetic Fields

In the last section, we learned that if a charged particle is moving and then placed in an **EXTERNAL** magnetic field, it will be acted upon by a magnetic force. The same is true for a current carrying wire.

The reason the wire and/or particle was moved was because there was an **INTERNAL** magnetic field acting around it. It is the interaction between these 2 fields which cause the force.

Can we define this **INTERNAL** magnetic field mathematically?

Magnetic Sources:

Electromagnetic Sources and Electromagnetic Fields Gaobiao Xiao, 2024-01-16 This book presents a modified spherical harmonic expansion method in which the electromagnetic fields and their sources are expanded with the same set of spherical vector basis functions in a similar procedure Explicit expressions for the electromagnetic fields potentials energies and the related Green's functions are derived for the spherical modes in both frequency domain and time domain Based on the formulation the relationships between the electromagnetic sources the electromagnetic far fields and the electromagnetic near fields are clearly revealed In particular a nonuniform transmission line model is developed for intuitively characterizing the total radiation process The introduction of the cutoff radius and the cutoff mode degree provides a simple reference for determining the numbers of degrees of freedom of the fields associated with sources in a bounded region Based on the theory an efficient hybrid method for synthesizing antenna arrays with complex footprints is proposed and demonstrated with several numerical examples Effective algorithms are also developed for reconstructing the radiating part of the current sources This book is intended for researchers engineers and graduate students who are interested in studying the energy transfer in electromagnetic radiation synthesis and measurement of antenna arrays and applications of inverse electromagnetic source problems

Introduction to Controlled-Source Electromagnetic Methods Anton Ziolkowski, Evert Slob, 2019-03-07 This volume describes how controlled source electromagnetic CSEM methods are used to determine the electrical conductivity and hydrocarbon content of the upper few kilometres of the Earth on land and at sea The authors show how the signal to noise ratio of the measured data may be maximised via suitable choice of acquisition and processing parameters and selection of subsequent data analysis procedures Complete impulse responses for every electric and magnetic source and receiver configuration are derived providing a guide to the expected response for real data 1 D 2 D and 3 D modelling and inversion procedures for recovery of Earth conductivity are presented emphasising the importance of updating model parameters using complementary geophysical data and rock physics relations Requiring no specialist prior knowledge of electromagnetic theory and providing a step by step guide through the necessary mathematics this book provides an accessible introduction for advanced students researchers and industry practitioners in exploration geoscience and petroleum engineering
