**Magnetism, magnetic Materials And Their Applications Iii - Proceedings Of The Iii Latin American Workshop** F Leccabue, Vicente Sagredo, 1996-08-22 This volume is a collection of the papers presented at the III Latin American Workshop on Magnetism Magnetic Materials and Their Applications Mrida Venezuela 20-24 November 1995 following those held in La Habana Cuba in 1991 and Guanajuato Mexico in 1993 Recent research on magnetic materials with particular reference to fundamental properties materials preparation and characterisation techniques and applications are discussed in this volume

**Magnetism, Magnetic Materials And Their Applications Proceedings Of III Latin American Workshop** F. Leccabue, *Magnetic Properties Of Matter - Proceedings Of The National School "New Developments And Magnetism's Applications"* L Lanotte, F Lucari, L Pareti, 1996-08-22 This book presents the special properties of low dimensional magnetic systems i.e. film multilayers fine particles nanostructured materials and reflecting the recent researches It is divided into four parts i contains a phenomenological description of the fundamentals of magnetism ii covers preparation and properties of films and multilayers with special emphasis on Giant Magnetoresistance iii focuses on fine particles and nanostructured systems and iv dedicated to innovative magnetic materials for the next generation New Trends in Magnetism, Magnetic Materials, and Their Applications J.L. Morán-López, José M. Sánchez, 2013-11-11 During August 24-27 1993 approximately 60 scientists from the Americas Europe and Japan gathered in the city of Guanajuato in the state of Guanajuato Mexico at the II Latin American Workshop on Magnetism Magnetic Materials and their Applications The group of scientists converging into the beautiful city of Guanajuato had come from Argentina Chile Brazil Venezuela Cuba several places in Mexico U S A Japan Spain France Italy Germany Austria Switzerland and Denmark The event attested to the success of the previous Workshop on Magnetism Magnetic Materials and their Applications held in Havana Cuba in 1991 as well as to the interest level of activity and quality of the work being carried out in Latin America in the area of magnetism and magnetic materials Equally important to everyone present was the fact that we had come to honor a friend Professor L M Falicov on his sixtieth birthday The choice of a Latin American Workshop on magnetism as a Festschrift for Leo Falicov was in our opinion quite appropriate not only because of Leo's strong ties to Latin America but also because of his superb contributions to science and in particular to magnetism Professor Falicov was born in Buenos Aires Argentina where he spent a good part of his formative years *American Book Publishing Record*, 1997 Ternary and Multinary Compounds R.D Tomlinson, A.E Hill, R.D Pilkington, 1998-01-01 Multinary compounds are now used in a wide range of devices including photovoltaic solar cells light emitters and detectors and piezoelectric actuators Ternary and Multinary Compounds provides an interdisciplinary forum for scientists and engineers working on fundamental and applied aspects of these materials The volume focuses on optoelectronic properties electronic band structure charge carrier transport optical and magnetic properties and superconductivity It includes chapters on the research and development of new techniques and novel materials such as laser

ablation deposition and ferroelectrics      New Developments in Ferromagnetism Research V. N. Murray, 2005

Ferromagnetism is a form of magnetism that can be acquired in an external magnetic field and usually retained in its absence so that ferromagnetic materials are used to make permanent magnets A ferromagnetic material may therefore be said to have a high magnetic permeability and susceptibility which depends upon temperature Examples are iron cobalt nickel and their alloys Ultimately ferromagnetism is caused by spinning electrons in the atoms of the material which act as tiny weak magnets They align parallel to each other within small regions of the material to form domains or areas of stronger magnetism In an unmagnetised material the domains are aligned at random so there is no overall magnetic effect If a magnetic field is applied to that material the domains align to point in the same direction producing a strong overall magnetic effect Permanent magnetism arises if the domains remain aligned after the external field is removed Ferromagnetic materials exhibit hysteresis In 2004 it was discovered that a certain allotrope of carbon nanofoam exhibited ferromagnetism The effect dissipates after a few hours at room temperature but lasts longer at cold temperatures The material is also a semiconductor It is thought that other similarly formed materials of boron and nitrogen may also be ferromagnetic This new book rings together leading research from throughout the world      Electrical & Electronics Abstracts ,1997      **The**

**History of Physics in Cuba** Angelo Baracca, Jürgen Renn, Helge Wendt, 2014-04-22 This book brings together a broad spectrum of authors both from inside and from outside Cuba who describe the development of Cuba's scientific system from the colonial period to the present It is a unique documentation of the self organizing power of a local scientific community engaged in scientific research on an international level The first part includes several contributions that reconstruct the different stages of the history of physics in Cuba from its beginnings in the late colonial era to the present The second part comprises testimonies of Cuban physicists who offer lively insights from the perspective of the actors themselves The third part presents a series of testimonies by foreign physicists some of whom were directly involved in developing Cuban physics in particular in the development of teaching and research activities in the early years of the Escuela de Física The fourth part of the volume deals with some of the issues surrounding the publishing of scientific research in Cuba Cuba's recent history and current situation are very controversial issues Little is known about the development and status of higher education and scientific research on the island However Cuba has one of the highest proportions in the world of people with a university degree or doctorate and is known for its highly developed medical system This book focuses on a comprehensive overview of the history of the development of one specific scientific discipline physics in Cuba It traces the evolution of an advanced research system in a developing country and shows a striking capacity to link the development of modern research with the concrete needs of the country and its population A little known aspect is the active participation of several western physicists and technicians during the 1960s the role of summer schools organized by French Italian and other western physicists as well as the active collaboration with European universities      **Proceedings of the VI Latin American Workshop on**
