Functional Food and Diseases

Preetha Bhadra,Pradipta Banerjee,Atanu Deb,2021-06-30 The concept originated in Japan in the 1980s when government agencies started approving foods with proven benefits in an effort to better the health of the general population Functional foods is a very popular term in the social and scientific media consequently food producers have invested resources in the development of processed foods that may provide added functional benefits to consumers well being Because of intrinsic regulation and end of use purposes in different countries worldwide meanings and definitions of this term are still unclear Hence here we standardize this definition and propose a guideline to attest that some ingredients or foods truly deserve this special designation Furthermore focus is directed at the most recent studies and practical guidelines that can be used to develop and test the efficacy of potentially functional foods and ingredients The most widespread functional ingredients such as polyunsaturated fatty acids PUFAs probiotics prebiotics synbiotics and antioxidants and their technological means of delivery in food products are described Biogenics are biologically active peptides including immunopotentiators biological response modifier BRM plant flavonoids etc Thus functional foods enhance bioregulation such as stresses appetite and absorption biodefence such as immunity and suppression of allergies prevent diseases including diarrhea constipation cancer cholesterolemia and diabetes and suppress aging through immunostimulation as well as suppression of mutagenesis carcinogenesis oxidation processes intestinal putrefaction and cholesterolemia
