established for linear time invariant systems it is not suitable for non stationary systems among which are sampled data systems and processes with periodically varying coefficients Computer controlled continuous time processes are a very important subset of periodic sampled data systems which are not treatable using ordinary transfer functions Having established the ability of the parametric transfer function to solve this problem for single input single output systems in previous work the authors extend these methods which incorporate time dependence to the idea of the parametric transfer matrix in a complete exposition of analysis and design methods for multiple input multiple output MIMO sampled data systems Of special interest to researchers in automatic control and to development engineers working with advanced control technology Multivariable Computer controlled Systems will also interest mathematical control theorists and graduate students studying advanced methods of computer based control
