Stress Proof the Heart Ellen A. Dornelas, 2012-02-01 Cardiovascular disease is a leading cause of death throughout the

world Chronic negative emotions such as depression and anxiety place cardiac patients at greater risk for death and recurrence of cardiovascular disease In 2008 the editor published a book related to this topic titled Psychotherapy with Cardiac Patients Behavioral Cardiology in Practice American Psychological Association Aside from that book there are very few resources specifically written for clinicians who treat psychologically distressed cardiac patients Unlike other medical specialty areas such as oncology the field of cardiology has been slow to integrate behavioral treatments into the delivery of service Perhaps because the field has been largely defined and dominated by researchers mental health clinicians are only starting to recognize behavioral cardiology as a viable arena in which to practice There is a large void in the practitioner literature on behavioral cardiology In a review of Psychotherapy with Cardiac Patients Paul Efthim Ph D wrote Her new book goes well beyond previous works by giving specific and detailed guidance about how to tailor psychological interventions with this variegated population He added It would benefit from even more details about treatment approaches This proposed volume goes beyond the editor s previous volume by providing in depth descriptions of behavioral treatments for distressed cardiac patients written by eminent leaders in behavioral cardiology This book describes a wide range of behavioral treatments for the common psychologically based problems encountered by clinicians who treat cardiac patients The book is organized as follows Part I focuses on the most psychologically challenging and common presentations of cardiac diagnosis coronary artery disease arrhythmia and heart failure This section also includes a chapter on heart transplantation which is a treatment not a diagnosis but a treatment that incurs profound psychological impact for the individual In Part II behavioral interventions for the general cardiac population are described Mainstream therapies such as stress management cognitive behavioral therapy and medical family therapy are described along with approaches that have less empirical support but considerable practical significance such as personality guided therapy and interventions aimed at altering type D personality traits The literature in behavioral cardiology has a rich history of investigating maladaptive personality traits and thus it is important to include behavioral approaches that target personality in this volume Part III focuses on common behavioral problems encountered by clinicians who work with this patient population Most patients who seek psychological help do so because they perceive themselves to be stressed due to their job or overextended in all areas of their life Other people with heart disease present with sleep problems and or an inability to motivate themselves to exercise or quit smoking There are many practical behavioral approaches that can be helpful for patients with these difficulties and these are detailed in this section of the book The conclusion of the book focuses on how to integrate the behavioral treatments described in the preceding chapters into a comprehensive treatment model

dropped significantly and they experienced a marked improvement in blood flow to the heart Twenty years later the majority of Dr Esselstyn's patients continue to follow his program and remain heart attack proof Prevent and Reverse Heart Disease explains the science behind these dramatic results and offers readers the same simple nutrition based plan that has changed the lives of his patients forever In addition Dr Esselstyn provides more than 150 delicious recipes that he and his wife Ann Crile Esselstyn have enjoyed for years and used with their patients Clearly written and backed by irrefutable scientific evidence startling photos of angiograms and inspiring personal stories Prevent and Reverse Heart Disease will empower readers to take charge of their heart health It is a powerful call for a paradigm shift in heart disease therapy

Psychotherapy with Cardiac Patients Ellen A. Dornelas, 2008 Heart disease is the leading cause of death in the United States and those who experience cardiac events suffer a wide range of psychological sequelae Yet few books show psychotherapy practitioners how they can modify their techniques to accommodate the unique needs of this population The author an experienced hospital based psychologist provides an orientation to this specialization and drawing on a variety of therapy models describes empirically supported intervention strategies After providing an overview of the cardiovascular system she discusses lifestyle and psychological risk factors for heart disease Subsequent chapters cover practical techniques for helping patients overcome depression anxiety and hostility all factors that complicate recovery A final group of chapters addresses factors that affect treatment effectiveness such as substance abuse problems obesity and sex differences Case illustrations are provided throughout Cover PsycINFO Database Record c 2008 APA all rights reserved *State of the Heart* Haider Warraich, 2020-11-17 In *State of the Heart* Dr Haider Warraich takes readers inside the ER inside patients rooms and inside the history and science of cardiac disease *State of the Heart* traces the entire arc of the heart from the very first time it was depicted on stone tablets to a future in which it may very well become redundant While heart disease has been around for a while the type of heart disease people have why they have it and how it's treated is changing Yet the golden age of heart science is only just beginning And with treatments of heart disease altering the very definitions of human life and death there is no better time to look at the present and future of heart disease the doctors and nurses who treat it the patients and caregivers who live with it and the stories they hold close to their chests More people die of heart disease than any other disease in the world and when any form of heart disease progresses it can result in the development of heart failure Heart failure affects millions and can affect anyone at anytime a child recovering from a viral infection a woman who has just given birth or a cancer patient receiving chemotherapy Yet new technology to treat heart failure is fundamentally changing just what it means to be human Mechanical pumps can be surgically sown into patients hearts and when patients with these pumps get really sick sometimes they don't need a doctor or a surgeon they need a mechanic In *State of the Heart* the journey to rid the world of heart disease is shown to be reflective of the journey of medical science at large We are learning not only that women have as much heart disease as men but that the type of heart disease women experience is

diametrically different from that in men We are learning that heart disease and cancer may have more in common than we could have imagined And we are learning how human evolution itself may have led to the epidemic of heart disease In understanding how our knowledge of the heart evolved State of the Heart traces the twisting and turning road that science has taken filled with potholes and blind turns all the way back to its very origin
