

## **Environmental Cleaning: Sample Policy and Procedure**

### **Purpose**

To maintain a clean environment for patients and minimize the risk of patient and healthcare personnel exposure to potentially infectious microorganisms.

### **Policy**

The patient care environment throughout the facility will be maintained in a state of cleanliness that meets professional standards in order to protect patients and healthcare personnel from potentially infectious microorganisms. Environmental cleaning is a team effort. Personnel responsible for cleaning the environment and equipment will receive education and training on proper environmental cleaning and disinfection methods, agent use and selection, and safety precautions.

### **Procedure**

Personal protective equipment (PPE) must be worn according to the Occupational Safety and Health Administration (OSHA) Bloodborne Pathogen Standard when disposing of waste that could result in exposure to bloodborne or other potentially infectious microorganisms and hazardous material.

1. At the beginning of each day or prior to the first procedure, horizontal surfaces, OR/procedure room lights, OR/procedure room furniture will be damp-dusted using a clean lint free cloth dampened with a facility-approved, Environmental Protection Agency (EPA)-registered disinfectant.
2. Cleaning of OR/procedure room between procedures must be done with a facility-approved, EPA-registered disinfectant.
  - Prepare disinfectant solution according to manufacturer's instructions.
  - Clean hands and put on gloves
  - Collect and remove waste
  - Collect and remove all soiled linen
  - Remove gloves and clean hands
  - Use a cloth dampened in disinfectant solution to clean and disinfect horizontal surfaces that have come in contact with a patient or body fluids, including blood pressure cuffs, tourniquets and leads
  - Clean suction canisters
  - Clean and disinfect bed
  - Damp mop floor in a 3 to 4 feet perimeter around the bed (larger area if contamination present); use a separate mop head per case. Allow to air dry
  - Insert new waste liner bags
  - When cleaning is complete, remove gloves and clean hands
3. Terminal cleaning of each operating and procedure room will be completed daily when the scheduled procedures are completed for the day. Unused rooms should be cleaned once during each 24-hour period during the regularly scheduled work week because personnel entering unused rooms and moving equipment and supplies in and out of the room can increase the risk of environmental contamination. Mechanical friction and a

Environmental Management Science and Engineering for Industry consists of 18 chapters starting with a discussion of International Environmental Laws and crucial environmental management tools including lifecycle environmental impact and environmental risk assessments. This is followed by a frank discussion of environmental control and abatement technologies for water, wastewater, soil, and air pollution. In addition, this book also tackles Hazardous Waste Management and the landfill technologies available for the disposal of hazardous wastes. As managing environmental projects is a complex task with vast amounts of data, an array of regulations, and alternative engineering control strategies designed to minimize pollution and maximize the effect of an environmental program, this book helps readers further understand and plan for this process. Contains the latest methods for identifying, abating, or eliminating pollutants from air, water, and land. Presents up-to-date coverage on environmental management tools such as risk assessment, energy management, and auditing environmental accounting and impact assessments. Includes methods for collecting and synthesizing data derived from environmental assessments.
