

WHAT CAN I DO? You can take simple steps to reduce your exposure to lead in contaminated soils or dust.

Talk with EPA about testing your yard or private well

Get your child tested for lead poisoning, even if he or she seems healthy

Wash hands – especially children's – after handling soil, playing outside, and before meals

Take shoes off at the door; clean children's feet and pets' paws/fur at the door

Damp (not dry) mop and dust surfaces regularly; keep toys and play areas clean

Make sure children eat nutritious meals high in iron and calcium

Practice safe gardening and wash foods grown in contaminated soil

Be aware of other sources of lead and try to minimize your overall exposure

Patient Safety and Quality: section 1, Patient safety and quality ; section 2, Evidence-based practice ; section 3, Patient-centered care Ronda Hughes, 2008. Nurses play a vital role in improving the safety and quality of patient care not only in the hospital or ambulatory treatment facility but also of community based care and the care performed by family members. Nurses need to know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ) with additional funding from the Robert Wood Johnson Foundation has prepared this comprehensive 1,400 page handbook for nurses on patient safety and quality. Keeping Patients Safe Institute of Medicine, Board on Health Care Services, Committee on the Work Environment for Nurses and Patient Safety, 2004-03-27. Building on the revolutionary Institute of Medicine reports *To Err is Human* and *Crossing the Quality Chasm*, *Keeping Patients Safe* lays out guidelines for improving patient safety by changing nurses' working conditions and demands. Licensed nurses and unlicensed nursing assistants are critical participants in our national effort to protect patients from health care errors. The nature of the activities nurses typically perform—monitoring patients, educating home caretakers, performing treatments, and rescuing patients who are in crisis—provides an indispensable resource in detecting and remedying error-producing defects in the U.S. health care system. During the past two decades, substantial changes have been made in the organization and delivery of health care and consequently in the job description and work environment of nurses. As patients are increasingly cared for as outpatients, nurses in hospitals and nursing homes deal with greater severity of illness. Problems in management practices, employee deployment, work and workspace design, and the basic safety culture of health care organizations place patients at further risk. This newest edition in the groundbreaking Institute of Medicine *Quality Chasm* series discusses the key aspects of the work environment for nurses and reviews the potential improvements in working conditions that are likely to have an impact on patient safety.
