The New Wood Architecture Naomi Stungo,2001 Following on the success of the hardback this new paperback considers thirty recently completed timber built schemes by progressive architectural practices It looks at how the selected buildings have derived their special character from wood in response to an assortment of intriguing briefs including an Olympic hall a textile museum a painter s studio and a theatre The author s argument that wood is the building material of the future is explored through five chapters each defining a different aspect of the debate A new style brings together the work of a generation of forward looking architects who have rejected the high tech and deconstructivist aesthetics of their predecessors and are instead using wood to design to the paired down legacy of such mentors as Herzog de Meuron New technology looks at how advances in technology have enhanced the ease with which timber can be used as a building material and shows how architects have employed this to their advantage Green thinking recounts the ingenious ways in which well thought out wooden buildings have used wood to blur the boundaries between inside and out with some startlingly beautiful results And fi

Iraqi Women Nadjé Sadig Al-Ali,2007-02-12 Publisher description **Democratic Governance** Séverine Bellina,Hervé Magro,Viola de Villemeur,France. Ministère des affaires étrangères et européennes,2009 Governance has become a key word in the lexicon of international relations over the last twenty years It is used loosely and invariably in a liberal idiom by scholars activists civil society organizations politicians and the voluntary sector In many respects it has attained the status of a fetish yet governance remains a notion that has multiple definitions a concept in the making Notwithstanding the imprecision with

which the term is employed it has become an inescapable paradigm for the politics of development The contributors to this book drawn from among some of the world's best area studies specialists from North and South offer a diverse global critique of governance as deployed in several key areas institutions and state actors the rule of law democracy and human rights decentralization and state power development and last but not least international cooperation and the role of the World Bank the IMF and NGOs The geographical spread of the volume ranges from Africa to Latin America from Asia to the Middle East Their objectives include a reassessment of governance in its many manifestations an attempt to free the term from its often unhelpful linkage to the state and thereby apply it to other organizations and actors a re-evaluation of the Western dominated use of the term politically and an attempt to broaden its application beyond issues such as transparency and the fight against corruption and a search for innovative applications of the term driven by a consensus that transcends current economic and political inequalities

Edible Insects Arnold van Huis, Food and Agriculture Organization of the United Nations, 2013 Edible insects have always been a part of human diets but in some societies there remains a degree of disdain and disgust for their consumption Although the majority of consumed insects are gathered in forest habitats mass rearing systems are being developed in many countries Insects offer a significant opportunity to merge traditional knowledge and modern science to improve human food security worldwide This publication describes the contribution of insects to food security and examines future prospects for raising insects at a commercial scale to improve food and feed production diversify diets and support livelihoods in both developing and developed countries It shows the many traditional and potential new uses of insects for direct human consumption and the opportunities for and constraints to farming them for food and feed It examines the body of research on issues such as insect nutrition and food safety the use of insects as animal feed and the processing and preservation of insects and their products It highlights the need to develop a regulatory framework to govern the use of insects for food security And it presents case studies and examples from around the world Edible insects are a promising alternative to the conventional production of meat either for direct human consumption or for indirect use as feedstock To fully realise this potential much work needs to be done by a wide range of stakeholders This publication will boost awareness of the many valuable roles that insects play in sustaining nature and human life and it will stimulate debate on the expansion of the use of insects as food and feed
