Looking east looking west Bill Slee, Chen Tong, Bundit Anurugsa, Rainer Haas, Maurizio Canavari, 2023-09-04 This book represents a unique collection of European and Asian perspectives on the production trade and consumption of high quality food The rapidly growing demand for organic and quality food in Europe imposes new challenges on competing food value chains Europe as the biggest worldwide food importer attracts many developing and developed countries in Asia Prospering

Chinese and Thai food markets offer new opportunities for European operators. Wealthy and informed consumers on both continents search for trustworthy high quality food products. Farmers, operators and retailers from distant cultures are coping with different standards facing the ever increasing necessity for mutual understanding. This publication is the output of Bean Quorum, a European funded Asia Link project. Bean Quorum represents a consolidated network of researchers working together with the business sector and NGOs to enhance European Asian understanding about organic and quality food. This book describes global trends in organic and quality food trade and connects them with recent developments in Asian and European market structures. Selected case studies illustrate the impact of organic and quality food production on topics ranging from sustainable rural development to the potential of exotic new plant varieties to purchase decisions of European or Asian retail managers. Selected European markets are mirrored by the situation in Chinese and Thai markets. Finally, environmental issues concerning global trade of quality food are addressed.

Seed Trade in Rural Markets Leslie Lipper, C. Leigh Anderson, Timothy J. Dalton, 2009-12-01. Markets have been found to be an increasingly important source of the seeds of crops and varieties. Low income farmers need to improve their livelihoods encompassing both the formal and informal seed sector. Markets also have major impacts on agricultural biodiversity by affecting farmers' choice of crops and varieties to grow. They are not, however, a homogeneous institution. Although all too frequently policies and regulations are developed as though they were. Markets vary considerably depending on the participants, on the institutions that govern how and what they exchange and on local agricultural economic and social conditions. Developing effective strategies to improve the way agricultural markets work, including how farmers use crop genetic resources, requires understanding of these variations. **Seed Trade in Rural Markets** presents a unique set of case studies from Bolivia, India, Kenya, Mali and Mexico on agricultural seed and product markets that describe three important market characteristics expected to affect farmers' access to seeds and varieties: the range of varieties on offer, the information provided about them and relative prices. The case studies all based around a common framework to aid comparability also provide information on social, agricultural and economic factors which may be affecting the market, availability, information and cost of crop genetic resources and ultimately the capacity to stimulate agricultural development. Published with the Food and Agriculture Organization (FAO) of the United Nations.
