life had been around for more than two million millennia Cambrian rocks preserve the record of the first appearance of complex animals with eyes protective skeletons antennae and complex ecologies Grazing predation and multi tiered ecosystems with animals living in on or above the sea floor became common The cascade of interaction led to an ever increasing diversification of animal body types By the end of the period the ancestors of sponges corals jellyfish worms mollusks brachiopods arthropods echinoderms and vertebrates were all in place The evidence of this Cambrian explosion is preserved in rocks all over the world including North America where the seemingly strange animals of the period are preserved in exquisite detail in deposits such as the Burgess Shale in British Columbia Cambrian Ocean World tells the story of what is for us the most important period in our planet s long history Definitely the best introductory textbook within its field It is clearly worth reading Deposits Magazine

Oliveros, Luke J. Welton, Ashley Rock, John Swab, Merlijn Van Weerd, Jonah van Beijnen, Edgar Jose, Dominic Rodriguez, Edmund Jose, Arvin C. Diesmos, 2013-02-07 Long celebrated for its more than 7 100 islands the Philippines is a country in Southeast Asia that shares only with Madagascar the distinction of having been designated as both a Megadiverse Nation and a Global Biodiversity Conservation Hotspot The terrestrial vertebrate fauna of the northeastern Philippines specifically Luzon Island has been the subject of intense interest since the first historical explorations Historically numerous works considered the biodiversity of Luzon as depauperate in the sense that they was presumed to contain a reduced number of species shared with a continental mainland source This view has persisted until recently when a renewed interest in faunistic studies of the northern Philippines has produced a series of notable discoveries drawing attention to high levels of species diversity and endemism in the northern reaches of the archipelago We provide the first report on the herpetological biodiversity amphibians and reptiles of the northern Sierra Madre Mountain Range northeast Luzon Island Philippines We combine new and historical data and the results of recent fieldwork to highlight at least 101 species present in this unique region of the archipelago Not only is this fauna largely endemic approximately 70% but also our results add to a nascent body of literature suggesting that the northern portions of the archipelago may be substantially more diverse than currently appreciated

Minnesota's St. Croix River Valley and the Anoka Sandplain Daniel S. Wovcha, We tend to take the landscape around us for granted believing that the land has looked smelled and sounded as it does now for as far back in time as we can imagine from the book Just 150 years after the first Euro American settlers moved into the region now known as the St Croix River Valley and Anoka
