Magnetic Stars:

Magnetic Fields in O, B, and A Stars Svetlana Hubrig, Markus Schöller, 2021 The last few decades have seen significant progress in our understanding of the occurrence of magnetic fields in stars with radiative envelopes in particular in massive stars and in intermediate mass stars at early evolutionary stages This book provides a comprehensive review of the most recent achievements in the measurements of stellar magnetic fields in O B and A stars These include the archetypes of stellar magnetism the chemically peculiar Ap and Bp stars O and early B type stars with their magnetospheres accreting Herbig Ae Be stars Wolf Rayet stars and high mass X ray binaries among others It provides an overview of the underlying physics for the interpretation of the data and identifies the requirements both observational and theoretical for improving our understanding of the origin of the magnetic fields in early type stars It aims to educate scientists working on stars who are not yet experts in magnetic field studies assuming that the reader is already familiar with basic terms and concepts of stellar astrophysics

Variable Stars as Essential Astrophysical Tools Cafer Ibanogamalu, 2012-12-06 Pulsating and eccentric binary stars play a fundamentally important role in deciphering the mass distribution within stars The present volume reviews the fundamental concepts of both radial and nonradial oscillations in the stars including the Sun Helio and astroseismological results are reviewed from the basics to the most recent developments A new theory is presented which seems to explain the mechanism of the light and radial velocity variations of recently discovered Ap stars This textbook covers almost all kinds of variable stars of widely different characteristics It will serve as a reference text for a very long time to come not only for specialists but also for undergraduate students of physics and astronomy

Introduction to Modeling Convection in Planets and Stars Gary A. Glatzmaier, 2013-11-24 This book provides readers with the skills they need to write computer codes that simulate convection internal gravity waves and magnetic field generation in the interiors and atmospheres of rotating planets and stars Using a teaching method perfected in the classroom Gary Glatzmaier

begins by offering a step by step guide on how to design codes for simulating nonlinear time dependent thermal convection in a two dimensional box using Fourier expansions in the horizontal direction and finite differences in the vertical direction He then describes how to implement more efficient and accurate numerical methods and more realistic geometries in two and three dimensions In the third part of the book Glatzmaier demonstrates how to incorporate more sophisticated physics including the effects of magnetic field density stratification and rotation Featuring numerous exercises throughout this is an ideal textbook for students and an essential resource for researchers Describes how to create codes that simulate the internal dynamics of planets and stars Builds on basic concepts and simple methods Shows how to improve the efficiency and accuracy of the numerical methods Describes more relevant geometries and boundary conditions Demonstrates how to incorporate more sophisticated physics

Astrophysical Data Kenneth R. Lang, 2012-12-06 This volume of Astrophysical Data deals with Planets and Stars a second volume Part II will give data for Galaxies and the Universe They both provide basic data for use by all scientists from the amateur astronomer to the professional astrophysicist In this first volume we not only provide physical parameters of planets stars and their environment but we also provide the celestial coordinates required to observe them Here we use c g s units for they are the most commonly used in astronomy and astrophysics but our volume begins with astronomical and physical constants and the conversion factors needed for other units The next section concerns the planets and their satellites it singles out the Earth and Moon for special treatment Spacecraft rendezvous with the planets and satellites have led to improved values for their atmospheric compositions orbital parameters magnetic fields masses radii rotation periods and surface pressures and temperatures This section also contains data for the asteroids comets and their debris We then discuss everyday stars beginning with the Sun and continuing with basic stellar data the brightest stars and nearby stars Special categories of stars such as the Wolf Rayet stars magnetic stars flare stars and RS CVn binary stars are included

An Introduction to Plasma Astrophysics and Magnetohydrodynamics M. Goossens, 2012-12-06 Most of the visible matter in the universe exists in the plasma state Plasmas are of major importance for space physics solar physics and astrophysics On Earth they are essential for magnetic controlled thermonuclear fusion This textbook collects lecture notes from a one semester course taught at the KU Leuven to advanced undergraduate students in applied mathematics and physics A particular strength of this book is that it provides a low threshold introduction to plasmas with an emphasis on first principles and fundamental concepts and properties The discussion of plasma models is to a large extent limited to Magnetohydrodynamics MHD with its merits and limitations clearly explained MHD provides the students on their first encounter with plasmas with a powerful plasma model that they can link to familiar classic fluid dynamics The solar wind is studied as an example of hydrodynamics and MHD at work in solar physics and astrophysics
