Zirker, 2009-12-01 A main selection of Scientific American Book Club Magnetic fields permeate our vast universe urging electrically charged particles on their courses powering solar and stellar flares and focusing the intense activity of pulsars and neutron stars Magnetic fields are found in every corner of the cosmos For decades astrophysicists have identified them by their effects on visible light radio waves and x rays J B Zirker summarizes our deep knowledge of magnetism pointing to what is yet unknown about its astrophysical applications In clear nonmathematical prose Zirker follows the trail of magnetic exploration from the auroral belts of Earth to the farthest reaches of space He guides readers on a fascinating journey of discovery to understand how magnetic forces are created and how they shape the universe He provides the historical background needed to appreciate exciting new research by introducing readers to the great scientists who have studied magnetic fields Students and amateur astronomers alike will appreciate the

readable prose and comprehensive coverage of The Magnetic Universe      **Conversations on Electric and Magnetic Fields in the Cosmos** Eugene N. Parker, 2013-03-25 Today's standard textbooks treat the theoretical structure of electric and magnetic fields but their emphasis is on electromagnetic radiation and static electric and magnetic fields. In this book Eugene Parker provides advanced graduate students and researchers with a much needed complement to existing texts one that discusses the dynamic electromagnetism of the cosmos that is the vast magnetic fields that are carried bodily in the swirling ionized gases of stars and galaxies and throughout intergalactic space. Parker is arguably the world's leading authority on solar wind and the effects of magnetic fields in the heliosphere and his originality of thought and distinctive approach to physics are very much in evidence here. Seeking to enrich discussions in standard texts and correct misconceptions about the dynamics of these large scale fields Parker engages readers in a series of conversations that are at times anecdotal and even entertaining without ever sacrificing theoretical rigor. The dynamics he describes represents the Maxwell stresses of the magnetic field working against the pressure and inertia of the bulk motion of ionized gases characterized in terms of the magnetic field and gas velocity. Parker shows how this dynamic interaction cannot be fully expressed in terms of the electric current and electric field. **Conversations on Electric and Magnetic Fields in the Cosmos** goes back to basics to explain why classical hydrodynamics and magnetohydrodynamics are inescapable even in the deepest reaches of space      Magnetism and the cosmos ,1967      **The Book of Universes** John D. Barrow, 2011 Barrow presents an unforgettable tour of the strange and wonderful universes that modern physics posits might just might be out there

**Extreme Cosmos** Bryan Gaensler, 2012-07-03 A top astronomer explores the universe through the lens of its most jaw dropping extremes. The universe is all about extremes and in this engaging and thought provoking book astronomer Bryan Gaensler gives a whirlwind tour of the galaxies with an emphasis on its fastest hottest heaviest brightest oldest densest and even loudest elements. From supernova explosions a billion times brighter than the sun to an asteroid the size of a beach ball Extreme Cosmos offers a fascinating fresh and informed perspective of the remarkable richness of the universe and the incredible physics that modern astronomy has revealed      **Cosmos and Diacosmos** Denton Jaques Snider, 1909      *The Electric Universe* Wallace Thornhill, David Talbott, 2007      **Our Beautiful Moon and its Mysterious Magnetism** Mike Fuller, 2013-09-24 This book is a summary of the history of discovering the moon. The author has been involved in the Apollo program working with its samples and this book covers these efforts. It describes the analysis methods of lunar samples and their interpretation to understand lunar paleomagnetism. The book has adopted an historical approach throughout tracing the development of the ideas of the Earth moon system of the birth of the space age of paleomagnetism and finally of lunar magnetism and its evidence for an early lunar dynamo      **Magnetism and the cosmos : N.A.T.O.
