Maimonide Philosophe Et Savant 11381204 Ancient And Clabical Sciences And Philosophy:

Ibn al-Haytham's Theory of Conics, Geometrical Constructions and Practical Geometry Roshdi

Rashed,2013-06-26 Theory of Conics Geometrical Constructions and Practical Geometry A History of Arabic Sciences and Mathematics Volume 3 provides a unique primary source on the history and philosophy of mathematics and science from the mediaeval Arab world The present text is complemented by two preceding volumes of A History of Arabic Sciences and Mathematics which focused on founding figures and commentators in the ninth and tenth centuries and the historical and epistemological development of infinitesimal mathematics as it became clearly articulated in the oeuvre of Ibn al Haytham This volume examines the increasing tendency after the ninth century to explain mathematical problems inherited from Greek times using the theory of conics Roshdi Rashed argues that Ibn al Haytham completes the transformation of this area of activity into a part of geometry concerned with geometrical constructions dealing not only with the metrical properties of conic sections but with ways of drawing them and properties of their position and shape Including extensive commentary from one of world s foremost authorities on the subject this book contributes a more informed and balanced understanding of the internal currents of the history of mathematics and the exact sciences in Islam and of its adaptive interpretation and assimilation in the European context This fundamental text will appeal to historians of ideas epistemologists and mathematicians at the most advanced levels of research *The Journal of Medieval and Early Modern Studies* ,2006

Mathématiques et Philosophie Roshdi Rashed,2023-08-07 The texts in these four volumes deal with the history and philosophy of mathematics and its applications The first three volumes are devoted to the history of mathematics arithmetic algebra geometry optics and astronomy from Antiquity to the Classical Age Over the last fifty years the numerous studies contained in this volume have renewed the study of the main Greek mathematicians Euclid Archimedes Apollonius Diophantus Menelaus and have shown the nature and scope of their reception and transformations both in classical Islam and in early European modernity The fourth volume establishes and explores various fields of research between philosophy and mathematics from the polymorphous interactions specific to Greek Arab and Latin science to the mathematisation of the social sciences in the eighteenth century Both in terms of the novelty of the material discovered and published for the first time and the power and finesse that continue to guide its epistemological analysis the dozens of contributions collected here represent a major work that has changed the history of science in our time **Cahiers de civilisation médiévale** ,2004
