Maintaining Esthetic Restorations:

Maintaining Esthetic Restorations Lynn M. Miller, 1989 Pediatric Restorative Dentistry Soraya Coelho Leal, Eliana Mitsue Takeshita, 2018-09-11 This book describes and discusses the different restorative options for managing carious lesions in children with primary and mixed dentition. The aim is to provide practitioners with thorough up to date information that will improve their clinical practice. The opening chapters present a comprehensive overview regarding diagnosis of carious lesions, risk assessment, child behavior and development and behavioral management. The importance of oral health promotion and prevention in controlling lesion progression and maintaining oral health is reviewed. The impact of various factors on clinician decision making is then explained in detail, examples including the type of dentition, primary versus permanent, the clinical and radiographic aspect of the dentine carious lesion, noncavitated or cavitated and whether the lesion is associated with a developmental defect. Guidance is provided on selection of nonoperative versus operative interventions and the restorative materials most frequently used in pediatric dentistry are fully described, highlighting their advantages and disadvantages. Readers will also find an informative series of cases with explanation of the choices in terms of materials and approach.

Dental Composite Materials for Direct Restorations Vesna Miletic, 2017-11-25 This book covers both basic scientific and clinically relevant aspects of dental composite materials with a view to meeting the needs of researchers and practitioners. Following an introduction on their development, the composition of contemporary composites is analyzed. A chapter on polymerization explains the setting reactions and light sources available for light cured composites. The quality of monomer to polymer conversion is a key factor for material properties. Polymerization shrinkage along with the associated stress remains among the most challenging issues regarding composite restorations. A new classification of dental composites is proposed to offer more clinically relevant ways of differentiating between commercially available materials. A review of specific types of composites provides an insight into their key issues. The potential biological issues of dental composites are reviewed in chapters on elution of leachable substances and cariogenicity of resin monomers. Clinical sections focus on material placement, finishing procedures and the esthetics and clinical longevity of composite restorations. Bonding to tooth tissues is addressed in a separate chapter as is the efficiency of various composite repair methods. The final chapter discusses future perspectives on dental composite materials.
