Maintenance Of Knowledge Based Systems:

Maintenance of Knowledge-based Systems Frans Coenen, Trevor J. M. Bench-Capon, 1993 The practical take up of Knowledge Based Systems KBSs is usually described as disappointing One explanation of the reluctance of organisations to make a real commitment to these systems stems from the lack of well defined techniques to engineer them in an acceptable manner Without the assurance of quality that can be given by the use of a proven methodology the risk of investing substantially in these systems will remain a risk too great to be taken One of the chief manifestations of the lack of these techniques is that it is impossible to say with any assurance that it will be possible to maintain the systems so that their useful life can be extended This book is concerned with the maintenance of KBSs providing a balance between the academic and the practical and containing analysis of tools developed in a research project The intention of the book is to move from very general concerns available to all systems through to specific techniques and tools designed to address particular problems in particular representations before concluding with some more general remarks This book is essential reading for anyone whether in a commercial or academic environment who wishes to build a serious Knowledge Based System that will continue to be used over a period of time **SPECIAL FEATURES** Building a Knowledge Based System is not the end of the story the system must be used and during its period of use the knowledge on which it relies will change and develop A Knowledge Based System that is not to become rapidly obsolete must change and develop with it This book addresses this neglected area of maintenance emphasising the specific maintenance tasks required by a Knowledge Based System The book provides a balance between the academic and the practical and containing analysis of tools developed in a research project

Schmoldt, H. Michael Rauscher, 2012-12-06 If one were forced to use a single key word to describe the decade of the 1980s a very prominent one would be technology Leading the forefront of technology advancement were breakthroughs in electronics Devices that were uncommon or unknown in 1980 became commonplace and almost indispensable by 1989 This trend has continued into the 1990s and it does not seem to be abating in any way Microwave ovens video recorders telephone answering machines compact disc players computers and a host of smaller or less sophisticated devices now appear in most households The development of small and inexpensive computers i.e. personal computers has placed computing resources within reach of many more people In addition many traditional and largely mechanical devices have been enhanced by electronics For example specialized microprocessors are combined with arrays of electronic sensors to control and monitor sophisticated engineering components in most new automobiles In this and many other ways we are touched by the new electronics in almost every aspect of our daily lives Initially personal computers were little more than toys They contained only a small fraction of the computing power of their immediate ancestors the mini computers and mainframe computers However rapid improvements in integrated circuit design and chip manufacture produced regular reductions in size and cost of computer components During the same time processor speed and sophistication increased

IBM's Big Blue are two familiar examples of dedicated knowledge bases in combination with an expert system for decision making. With volumes covering Implementation, Optimization, Computer Techniques and Systems and Applications, this comprehensive set constitutes a unique reference source for students, practitioners and researchers in computer science, engineering and the broad range of applications areas for knowledge based systems.

Knowledge Engineering John Debenham, 2012-12-06. This monograph describes a methodology for the design of knowledge based systems. A knowledge based system contains knowledge as well as information and data. The information and data in such a system can be modelled and implemented as a database. The knowledge in such a system can be implemented either in a programming language or in an expert systems shell. This methodology has two distinguishing features. First it is unified. A unified methodology represents the data, information and knowledge in a homogeneous manner as well as the relationships between them. Second the methodology builds a maintenance mechanism into the design. In knowledge engineering terms the representation used by this methodology to model knowledge bases applies equally to databases. In database terms the representation used by this methodology to model databases applies equally to the database rules. The unified methodology unifies the design of the knowledge base component and the database component. Unification is achieved in five senses.

Machine Learning for Cyber Physical Systems Oliver Niggemann, Christian Kühnert, Jürgen Beyerer, 2020-10-08. This Open Access proceedings presents new approaches to Machine Learning for Cyber Physical Systems experiences and visions. It contains some selected papers from the international Conference ML4CPS Machine Learning for Cyber Physical Systems which was held in Karlsruhe October 23-24, 2018. Cyber Physical Systems are characterized by their ability to adapt and to learn. They analyze their environment and based on observations they learn patterns, correlations and predictive models. Typical applications are condition monitoring, predictive maintenance, image processing and diagnosis. Machine Learning is the key technology for these developments. Engineering in Medicine which was held in Maastricht The Netherlands 16 18 March 1989 This workshop was sponsored by the EC under the framework of the Medical and Health Research Programme The aim of the workshop was to assess whether there was sufficient support in the Medical Informatics community in the EC to establish a concerted action This proceedings contain papers of the presentations given at the workshop These presentations were centred around three themes Methods and Tools Applications in the domains of chronic care and critical care Evaluation of decision support systems The papers were prepared after the workshop and therefore we were able to include the relevant parts of the discussions which were related to the presentations As a result of the discussions during the workshop a proposal was prepared for the establishment of a concerted action specifically addressing the development of guidelines for the evaluation of medical decision aids This proposal was granted early 1990 under the same Medical and Health Research programme of the EC Over 40 institutes are participating in this concerted action It have been the outstanding presentations and the open discussions at the workshop that have been the starting point of this concerted action The papers in this proceedings formed a starting point for the discussions in the meetings of the concerted action

Intelligent Knowledge-Based Systems Cornelius T. Leondes, 2010-04-28 For most of our history the wealth of a nation was limited by the size and stamina of the work force Today national wealth is measured in intellectual capital Nations possessing skillful people in such diverse areas as science medicine business and engineering produce innovations that drive the nation to a higher quality of life To better utilize these valuable resources intelligent knowledge based systems technology has evolved at a rapid and significantly expanding rate Reflecting the most fascinating AI based research and its broad practical applications intelligent knowledge based systems technology is being utilized by nations to improve their medical care advance their engineering technology and increase their manufacturing productivity as well as play a significant role in a very wide variety of other areas of activity of substantive significance Today in the beginning of the 21st century it is difficult to imagine the development of the modern world without extensive use of the AI information technology that is rapidly transforming the global knowledge based economy as well as entire societies The breadth of the major application areas of intelligent knowledge based systems technology is very impressive These include among other areas Agriculture Business Chemistry Communications Computer Systems Education Electronics Engineering Environment Geology Image Processing Information Management Law Manufacturing Mathematics Medicine Meteorology Military Mining Power Systems Science Space Technology and Transportation The great breadth and expanding significance of this field on the international scene require a multi volume major reference work for an adequately substantive treatment of the subject *Intelligent Knowledge Based Systems Business and Technology in The New Millennium* This work consists of the following distinctly titled and well integrated volumes Volume I Knowledge Based Systems Volume II Information Technology Volume III Expert and Agent Systems Volume IV Intelligent Systems Volume V Neural Networks This five volume set clearly manifests the great significance of these key technologies for the new economies of the new

Topics in Expert System Design C. Tasso, G. Guida, 2014-06-28 Expert Systems are so far the most promising achievement of artificial intelligence research Decision making planning design control supervision and diagnosis are areas where they are showing great potential However the establishment of expert system technology and its actual industrial impact are still limited by the lack of a sound general and reliable design and construction methodology This book has a dual purpose to offer concrete guidelines and tools to the designers of expert systems and to promote basic and applied research on methodologies and tools It is a coordinated collection of papers from researchers in the USA and Europe examining important and emerging topics methodological advances and practical experience obtained in specific applications Each paper includes a survey introduction and a comprehensive bibliography is provided

Managing Expert Systems Efraim Turban, Jay Liebowitz, 1992-01-01 Managing Expert Systems explores the trends in expert systems development and implementation As top authorities in the field of ES Turban and Liebowitz examine the factors that contribute to the development of a successful expert system

Intelligent Systems Cornelius T. Leondes, 2018-10-08 Intelligent systems or artificial intelligence technologies are playing an increasing role in areas ranging from medicine to the major manufacturing industries to financial markets The consequences of flawed artificial intelligence systems are equally wide ranging and can be seen for example in the programmed trading driven stock market crash of October 19 1987 Intelligent Systems Technology and Applications Six Volume Set connects theory with proven practical applications to provide broad

multidisciplinary coverage in a single resource In these volumes international experts present case study examples of successful practical techniques and solutions for diverse applications ranging from robotic systems to speech and signal processing database management and manufacturing
