A. Brebbia, 2013-06-25 Architectural heritage is now recognised to be of great importance to the historical identity In order to take care of the architectural heritage of a region town or nation now recognised as of great importance to their historical identity we need to share experiences and knowledge regarding heritage preservation in many parts of the world Covering advances in this field presented at the thirteenth in a series of now biennial conferences that began in 1989 this book covers such topics as Heritage architecture and historical aspects Learning from the past Surveying and monitoring Performance and maintenance Structural restoration of metallic structures Preservation and monitoring Earth construction Modern 19th 20th century heritage Maritime heritage Heritage masonry buildings Stone masonry walls Wooden structures Simulation and modelling Material characterization New technologies or materials Corrosion and material Decay Seismic vulnerability Non destructive techniques Assessment and re use of heritage buildings Heritage and tourism Social and economic aspects in heritage Guidelines codes and regulations for heritage *Maintenance of prestressed concrete structures* FIB - International Federation for Structural Concrete, 1978-01-01 *Acceptance of Stay Cable Systems Using Prestressing Steels* fib Fédération internationale du béton, 2005-01-01 This fib Recommendation gives technical guidelines regarding design testing acceptance installation qualification inspection and maintenance of stay cable systems using prestressing steels strands wires or bars as tensile elements which can be applied internationally This Recommendation is applicable for cable stayed bridges and other suspended structures such as roofs It may also be used for hangers in arch structures and as suspension cables as appropriate This Recommendation has been formulated by an international working group comprising more than 20 experts from administrative authorities universities laboratories owners structural designers suppliers of prestressing steels and stay cable suppliers The text has been written to cover best construction practices around the world and to provide material specifications that are considered to be the most advanced available at the time of preparing this text For ease of use for client designer and cable supplier the complex content has been arranged thematically according to the system components into chapters focusing on performance characteristics requirements and acceptance criteria Requirements and comments have been specified for all parties involved in design and construction in order to aim for a uniform and high quality and durability The interfaces to the structural designer are highlighted The essential subjects are

Design and detailing of stay cables including saddles and damping devices Durability requirements and corrosion protection systems Requirements for the materials Testing requirements for the stay cables Installation tolerances qualification of companies and personnel Inspection maintenance and repair This Recommendation does not cover the technology of stay cables whose tensile elements are ropes locked coil cables etc or which consist of composite materials Nevertheless in many cases the specified performance criteria may also be applicable to these systems although numerical values given for the acceptance criteria may need to be adjusted For these systems it has been difficult to provide multiple protective layers similar to those specified for stay cables made from prestressing steel and therefore the quality of corrosion protection may not be equivalent While extradosed cables have similarities with stay cables generally agreed design and system acceptance criteria are not yet available and therefore this type of cable is not covered
