Love Science:

Love and Science Jan Vilcek, 2016-12-20 Long before he became one of the world's most celebrated immunologists Jan Vilcek began life in Slovakia as the child of Jewish parents at a time when Jews were being exterminated all across Europe. He owes his and his mother's survival to the courage of brave people and good luck. As a young man growing up in Czechoslovakia in the aftermath of the Second World War Vilcek went to medical school and chose a career in virology and immunology at a time when these fields were still in their infancy. While still in his twenties he published a paper in the prestigious journal *Nature* and he hosted the first international conference on interferon. Fleeing Communist Czechoslovakia with his wife Marica Vilcek continued his research at NYU School of Medicine going on to establish a highly successful career in biomedical research and creating one of the most important and trailblazing medicines of our age. After his arrival in the US in 1965 as a penniless refugee he soon went on to spearhead some of the key advances in the research of interferon that enabled its therapeutic application and through his research into tumor necrosis factor (TNF) made advances that led to the discovery of new genes and proteins and signaling pathways opening up previously uncharted areas of medical innovation that have led to important new treatments for a wide range of autoimmune and inflammatory diseases. Along the way Vilcek acquired material wealth he had never aspired to catapulting him into the world of philanthropy. *Love and Science* shows how advances in science sometimes result from the greatest disappointments and how achievement in medical research is usually a team effort where ideas are shared where friendship and love sometimes matter most and serendipity is as important as a will to succeed and where over time the least expected thing sometimes becomes the most important. In Vilcek's case the vaunted cure for cancer that many saw in TNF never materialized. However out of the ashes of that hope came many related treatments that have changed countless lives and alleviated much suffering. **Why We Love** Anna Machin, 2022-02-01 An Oxford evolutionary anthropologist explores the ever elusive science of love. I Love Science! Shanny Jean Maney, 2012-03-14 Science poetry and Jeff Goldblum form a covalent bond that puts the poetic fire underneath our Bunsen burners. A Lab Tech of words Maney turns plain language into curious knowledge hungry poetry. **Love Sense** Dr. Sue Johnson, 2013-12-31 The bestselling author of *Hold Me Tight* presents a revolutionary new understanding of why and how we love based on cutting edge research. Every day we hear of relationships failing and questions of whether humans are meant to be monogamous. *Love Sense* presents new scientific evidence that tells us that humans are meant to mate for life. Dr. Johnson explains that romantic love is an attachment bond just like that between mother and child and shows us how to develop our love sense our ability to develop long lasting relationships. Love is not the least bit illogical or random but actually an ordered and wise recipe for survival. *Love Sense* covers the three stages of a relationship and how to best weather them the intelligence of emotions and the logic of love the physical and psychological benefits of secure love and much more. Based on groundbreaking research *Love Sense* will change the way we think about love. *Wonder* Frank C. Keil, 2022-03-01

How we can all be lifelong wonderers restoring the sense of joy in discovery we felt as children From an early age children pepper adults with questions that ask why and how Why do balloons float How do plants grow from seeds Why do birds have feathers Young children have a powerful drive to learn about their world wanting to know not just what something is but also how it got to be that way and how it works Most adults on the other hand have little curiosity about whys and hows we might unlock a door for example or boil an egg with no idea of what happens to make such a thing possible How can grown ups recapture a child s sense of wonder at the world In this book Frank Keil describes the cognitive dispositions that set children on their paths of discovery and explains how we can all become lifelong wonderers Keil describes recent research on children s minds that reveals an extraordinary set of emerging abilities that underpin their joy of discovery their need to learn not just the facts but the underlying causal patterns at the very heart of science This glorious sense of wonder however is stifled beginning in elementary school Later with little interest in causal mechanisms and motivated by intellectual blind spots as adults we become vulnerable to misinformation and manipulation ready to believe things that aren t true Of course the polymaths among us have retained their sense of wonder and Keil explains the habits of mind and ways of wondering that allow them and can enable us to experience the joy of asking why and how

The Science of Love Anthony Walsh,1996
The topic of love has been addressed in books that range from collections of syrupy aphorisms to how to books on relationships But love is far too broad and interesting a topic to be limited in this way Although this book includes three chapters on romantic love it broadens the scope to include the role of love in the developmental process of infants and children on physical and mental health and illness on violent criminality and other social aspects of love The literature reviewed for the book includes anthropology biology brain anatomy physiology chemistry genetics immunology medicine psychiatry psychology sociology and zoology The emphasis is on what various scientific disciplines have discovered about the role of love but Anthony Walsh also presents historical mythological and philosophical insights where appropriate

Attached Amir Levine,Rachel Heller,2010-12-30 Over a decade after its publication one book on dating has people firmly in its grip The New York Times We already rely on science to tell us what to eat when to exercise and how long to sleep Why not use science to help us improve our relationships In this revolutionary book psychiatrist and neuroscientist Dr Amir Levine and Rachel Heller scientifically explain why some people seem to navigate relationships effortlessly while others struggle Discover how an understanding of adult attachment the most advanced relationship science in existence today can help us find and sustain love Pioneered by psychologist John Bowlby in the 1950s the field of attachment posits that each of us behaves in relationships in one of three distinct ways Anxious people are often preoccupied with their relationships and tend to worry about their partner s ability to love them back Avoidant people equate intimacy with a loss of independence and constantly try to minimize closeness Secure people feel comfortable with intimacy and are usually warm and loving *Attached* guides readers in determining what attachment style they and their mate or potential mate follow offering a road map for
