**Globalized World** Dr Lauren C Heberle, Dr Susan M Opp, 2012-11-28 Sustainable development is a key issue of concern to urban planners across the globe. How it is defined, implemented and measured at the local level remains highly contested and subject to a wide range of external cultural, political and economic pressures. Bringing together leading experts from North America, Europe, the Middle East and SE Asia, this book provides a timely overview of the various methods for understanding and implementing sustainable practices at local levels. In doing so, they present the wide range of local action alternatives available to planners that may be pursued in spite of the constraints generated by globalization processes and highlight the array of public policy options that could reduce the external pressures shaping the possible local alternatives. The book argues that while local planners and local authorities are willing to act, many are unaware of the range of options available to them. In bringing together these case studies, not only diverse in geographic terms but also reflecting very different levels of income, general population, education, cultural norms, legal systems and government structures, it points out innovations and examples of best practice. Congrès international, conservation, réhabilitation, recyclage Université Laval. École d'architecture, Ordre des architectes du Québec, 1981. *By Design 2*, 1989. **Children, Nature, and the Urban Environment**, 1977. *Public Religion and the Urban Environment* Richard Bohannon, 2012-04-26 Nature and the city have most often functioned as opposites within Western culture, a dichotomy that has been reinforced and sometimes challenged by religious images. Bohannon argues here that cities and natural environments, however, are both connected and continually affected by one another. He shows how such connections become overt during natural disasters which disrupt the narratives people use to make sense of the world, including especially religious narratives and make them more visible. This book offers both a theoretical exploration of the intersection of the city, nature and religion as well as a sociological analysis of the 1997 flood in Grand Forks, ND, USA. This case study shows how religious factors have influenced how the relationship between nature and the city is perceived and, in particular, have helped to justify the urban control of nature. The narratives found in Grand Forks also reveal a broader understanding of the nature of Western cities, highlighting the potent and ethically rich intersections between religion, cities and nature. **Rebuilding the American City** David Gamble, Patty Heyda, 2015-12-22 Urban redevelopment in American cities is neither easy nor quick. It takes a delicate alignment of goals, power, leadership and sustained advocacy on the part of many. *Rebuilding the American City* highlights 15 urban design and planning projects in the U.S. that have been catalysts for their downtowns yet were implemented during the tumultuous start of the 21st century. The book presents five paradigms for redevelopment and a range of perspectives on the complexities, successes and challenges inherent to rebuilding American cities today. *Rebuilding the American City* is essential reading for practitioners and students in urban design, planning and public policy looking for diverse models of urban transformation to create resilient urban cores. **Encyclopedia of Twentieth Century Architecture** R.
