Economic Policy and Planning United States. Congress. Senate. Special Committee on Post-War Economic Policy and Planning,1945 **Tales from Albarado** Smoki Musaraj,2020-08-15

Tales from Albarado revisits times of excitement and loss in early 1990s Albania in which about a dozen pyramid firms collapsed and caused the country to fall into anarchy and a near civil war To gain a better understanding of how people from all walks of life came to invest in these financial schemes and how these schemes became intertwined with everyday transactions dreams and aspirations Smoki Musaraj looks at the materiality sociality and temporality of financial speculations at the margins of global capital She argues that the speculative financial practices of the schemes were enabled by official financial infrastructures such as the postsocialist free market reforms by unofficial economies such as transnational remittances as well as by historically specific forms of entrepreneurship transnational social networks and desires for a European modernity Overall these granular stories of participation in the Albanian schemes help understand neoliberal capitalism as a heterogeneous economic formation that intertwines capitalist and noncapitalist forms of accumulation and investment

Work and Labor Relations in the Construction Industry Dale Belman,Janet Druker,Geoffrey White,2021-02-16 The need for a skilled motivated and effective workforce is fundamental to the creation of the built environment across the world

Known in so many places for a tendency to informal and casual working practices for the sometimes abusive use of migrant labor for gendered male employment and for a neglect of the essentials of health and safety the industry its managers and its workforce face multiple challenges This book brings an international lens to address those challenges looking particularly at the diverse ways in which answers have been found to manage safe and productive employment practices and effective employment relations within the framework of client demands for timely and cost effective project completions Whilst context history and contractual frameworks may all militate against a careful attention to human resource issues this makes them even more deserving of attention Work and Labor Relations in Construction aims to share understanding of best practice in the industries associated with construction and related activities recognizing that effective work organization and good standards of employee relations will vary from one location to another It acknowledges the real difficulties encountered by workers in parts of the developing world and the quest for improvement and awareness of some of the worst hazards and current practices This book is both critical and analytical in approach and seeks to alert readers to the need for change Aimed at addressing practical issues within the construction industry from a theoretical and empirical standpoint it will be of value to those interested in the built environment employment relations and human resource management

Reason, Ideology, and Democracy Meg Patrick Tuszynski, Richard E. Wagner, 2024-10-17 Democratic political systems are often thought to be preferable to all others for supporting liberty Around the world nations that are more democratic tend to be freer across various aspects of life and human experience This book undertakes a social scientific analysis of this claim and finds it to be wanting The reality of democratic systems does not adhere to popular rhetoric One of the key reasons for this is that our system is an entangled system one in which the realm of the political and commercial are so intertwined that they cannot be easily separated Businessmen have political interests and politicians have commercial interests The implication of this entanglement is that alleviating the problems that emerge in democratic systems is not a simple matter of rolling back damaging interventions Due to the logic of entanglement returning to a free market is not possible in most cases The authors pull economics back to its classical roots to analyze the social orders that best allow people to live together The world is not constantly aiming at placidity as the prevailing economics of equilibrium would have us think We live in a world of change and turbulence so our social science requires a framework that deals with this turbulence robustly Classical economists beginning with Adam Smith sought to uncover which forms of human association allowed us to live better together The authors explain Smith's observations asking the same sorts of questions of readers today Because the baseline assumption of entanglement does not allow one to divide the world so clearly into two distinct structures the authors parallel Smith's approach focusing on forms of association rather than political or commercial structures Focusing on human association the authors help readers uncover the manifold structures humans have devised that allow them to tame the turbulence and live lives more harmoniously with others
