Investment Decision-making Using Optional Models David Heller, 2020-02-26 In order to create value companies must allocate their resources effectively and evaluate investment alternatives This book examines from a theoretical and empirical point of view how managerial flexibility can be integrated into investment decisions through the optional approach Unlike the traditional net present value method the actual options take into account indeterminate elements These lead to unpredictable cash flows at the time of the investment decision especially in the context of complex and risky projects The book puts into perspective the use of optional models and their interactions The different categories of options are the subject of practical applications through analysis of investment decisions where uncertainty is growing Therefore studies make it possible to consider the flexible nature of investment choices by integrating new information and risk over time

Real Options and Corporate Strategy Christian Berner, 2000-03-01 Inhaltsangabe Abstract Every investment for example new facilities new products or strategic partnerships is driven by the pursuit of creating values Major changes are going on in the valuation of investments Although the classic shareholder value concept is still a valuable source for identification of value drivers of strategic management it needs to be extended in terms of its ability to evaluate long term investment choices Far too long capital budgeting has only been considered under aspects of its contribution to an overall added economic value rather than focusing on a firm s resources Recent research emphasized the strategic value of resources leading to formulate the approach of a resource based view of a firm s activities Usually management tries to capture future development with static methods of capital budgeting i e future cash flows are discounted with a fixed risk adjusted discount rate However the finding of present values and capitalized values could produce pitfalls in investment decisions Strategic investment decisions are often characterized by a wide range of possibilities to react flexibly to the changing business environment This area of tolerance in investment decisions could not be captured with traditional instruments of investment evaluation In the 1970s the discounted cash flow analysis DCF emerged and proved its practicability This method assumes a now or never approach in undertaking a project Some authors suggest adding the theory of option prices to investment decisions as in the 1970s and the 1980s developments in the valuation of capital investment opportunities based on option pricing revolutionized capital budgeting Option pricing allows adaptation and revision of future decisions in order to capture managerial flexibility and to finally capitalize on any possible future development To incorporate these real options means to limit losses and offers a vital

contribution to long term corporate success especially in those marketplaces characterized by uncertainty and rapid change This method also explains the value of waiting for the initial project and considers its value in comparison to the opportunity costs of waiting These costs are dictated by the behavior of competitors and loss of cash flow streams from the project Incorporating this method could possibly lead to a better understanding of the importance of resource allocation the value of strategic investments and

Portfolios of Real Options Rainer Brosch, 2008-03-29 Valuing portfolios of options embedded in investment decisions is arguably one of the most important and challenging problems in real options and corporate finance in general Although the problem is common and vitally important in the value creation process of almost any corporation it has not yet been satisfactorily addressed It is key for any corporation facing strategic resource allocation decisions be it a pharmaceutical firm valuing and managing its pipeline of drugs a telecom company having to select a set of technological alternatives a venture capital or private equity firm investing in a portfolio of ventures or any company allocating resources Portfolios of real options typically interact such that the value of the whole differs from the sum of the separate parts Thus one must address and value the particular configuration of options embedded in a specific situation taking into account the configuration of other options already present in the portfolio which in turn depends on the correlation structure

among the various underlying assets and the strategic dependencies among the options themselves e.g mutual exclusivity strategic additivity compoundness complementarity etc In that sense optimal decisions also depend on past option exercise decisions by management and organizational capabilities put in place in the past
