Realism Rescued How Scientific Progress Is Possible:

Realism Rescued Jerrold L. Aronson, Rom Harré, Eileen Cornell Way, 1995 Does science give us a progressively more accurate and objective account of the world This book by three leading philosophers of science presents a new defense of scientific realism against skeptical and positivist attacks While positivists view scientific theories as devices for predicting observable phenomena realists maintain that theories describe hidden processes which account for observable phenomena This problem raises the question What are scientific theories about Do they refer to an unobservable yet real realm of physical processes It seems undeniable that the scientific endeavor has in some sense made progress But is the increasing practical success of the physical sciences good grounds for believing that their theories and techniques lead us nearer to the truth According to Aronson Harre and Way past failures to answer these questions have been due in large part to the assumption that knowledge is expressed in propositions and organized by the canons of logic On the assumption that science must meet the world in a correspondence between statements and states of affairs realism turns out to be difficult to defend Realism Rescued offers a new direction relying on the importance of models in scientific work Theories are not to be thought of as sets of propositions though they can be expressed propositionally Rather they are models chunks of orderings of natural kinds For the first time the indispensability of models is turned into a powerful argument for realism an argument that confronts the skeptic on his own ground By drawing on a new technique of knowledge representation developed in Artificial Intelligence the dynamic type hierarchy the authors give a convincing account of the central role of models Such concepts as verisimilitude natural kind natural necessity and natural law can then be presented far more clearly than ever before

Philosophy of Language and the Challenge to Scientific Realism Christopher Norris, 2004-06-02 In this book Christopher Norris develops the case for scientific realism by tackling various adversary arguments from a range of anti realist positions Through a close critical reading he shows how they fail to make adequate sense on any rational consistent and scientifically informed survey of the evidence Along the way he incorporates a number of detailed case studies from the history and philosophy of science Norris devotes much of his discussion to some of the most prominent and widely influential source texts of anti realism Also included are the sophisticated versions of verificationism developed albeit in very different ways by thinkers such as Michael Dummett and Bas van Fraassen Central to Norris's argument is a prolonged engagement with the once highly influential but nowadays neglected work of Norwood Russell Hanson This book will be welcomed especially by readers who possess some knowledge of the background debate and who wish to deepen and extend their understanding of these issues beyond an introductory level

The Routledge Handbook of Scientific Realism Juha Saatsi, 2017-11-22 Scientific realism is a central long standing and hotly debated topic in philosophy of science Debates about scientific realism concern the very nature and extent of scientific knowledge and progress Scientific realists defend a positive epistemic attitude towards our best theories and models regarding how they represent the world that is unobservable to our

naked senses Various realist theses are under sceptical fire from scientific antirealists e.g. empiricists and instrumentalists The different dimensions of the ensuing debate centrally connect to numerous other topics in philosophy of science and beyond The Routledge Handbook of Scientific Realism is an outstanding reference source the first collection of its kind to the key issues positions and arguments in this important topic Its thirty four chapters written by a team of international experts are divided into five parts Historical development of the realist stance Classic debate core issues and positions Perspectives on contemporary debates The realism debate in disciplinary context Broader reflections In these sections the core issues and debates presented analysed and set into broader historical and disciplinary contexts The central issues covered include motivations and arguments for realism challenges to realism from underdetermination and history of science different variants of realism the connection of realism to relativism and perspectivism and the relationship between realism metaphysics and epistemology The Routledge Handbook of Scientific Realism is essential reading for students and researchers in philosophy of science It will also be very useful for anyone interested in the nature and extent of scientific knowledge

Critical Scientific Realism Ilkka Niiniluoto, 1999-12-09 Ilkka Niiniluoto comes to the rescue of scientific realism showing that reports of its death have been greatly exaggerated Philosophical realism holds that the aim of a particular discourse is to make true statements about its subject matter Niiniluoto surveys the different varieties of realism in ontology semantics epistemology theory construction and methodology He then sets out his own original version and defends it against competing theories in the philosophy of science Niiniluoto's critical scientific realism is founded upon the notion of truth as correspondence between language and reality and characterizes scientific progress in terms of increasing truthlikeness This makes it possible not only to take seriously but also to make precise the troublesome idea that scientific theories typically are false but nevertheless close to the truth

Badiou's 'Being and Event' Christopher Norris, 2009-05-24 Alain Badiou's Being and Event is the most original and significant work of French philosophy to have appeared in recent decades It is the magnum opus of a thinker who is widely considered to have re shaped the character and set new terms for the future development of philosophy in France and elsewhere This book has been written very much with a view to clarifying Badiou's complex and demanding work for non specialist readers It offers guidance on philosophical and intellectual context key themes reading the text reception and influence and further reading

[EPSA15 Selected Papers](#) Michela Massimi, Jan-Willem Romeijn, Gerhard Schurz, 2017-04-26 This edited collection showcases some of the best recent research in the philosophy of science It comprises of thematically arranged papers presented at the 5th conference of the European Philosophy of Science Association EPSA15 covering a broad variety of topics within general philosophy of science and philosophical issues pertaining to specific sciences The collection will appeal to researchers with an interest in the philosophical underpinnings of their own discipline and to philosophers who wish to study the latest work on the themes discussed

Models and Idealizations in Science Alejandro Cassini, Juan Redmond, 2021-05-27 This book provides both

an introduction to the philosophy of scientific modeling and a contribution to the discussion and clarification of two recent philosophical conceptions of models artifactualism and fictionalism These can be viewed as different stances concerning the standard representationalist account of scientific models By better understanding these two alternative views readers will gain a deeper insight into what a model is as well as how models function in different sciences Fictionalism has been a traditional epistemological stance related to antirealist construals of laws and theories such as instrumentalism and inferentialism By contrast the more recent fictional view of models holds that scientific models must be conceived of as the same kind of entities as literary characters and places This approach is essentially an answer to the ontological question concerning the nature of models which in principle is not incompatible with a representationalist account of the function of models The artifactual view of models is an approach according to which scientific models are epistemic artifacts whose main function is not to represent the phenomena but rather to provide epistemic access to them It can be conceived of as a non representationalist and pragmatic account of modeling which does not intend to focus on the ontology of models but rather on the ways they are built and used for different purposes The different essays address questions such as the artifactual view of idealization the use of information theory to elucidate the concepts of abstraction and idealization the deidealization of models the nature of scientific fictions the structural account of representation and the ontological status of structures the role of surrogate reasoning with models and the use of models for explaining and predicting physical phenomena

Hilary Putnam Christopher Norris, 2002 This study examines Hilary Putnam's work in epistemology philosophy of science and mathematics philosophical logic and semantics and cognitive psychology It takes account of his various shifts in philosophical viewpoint over the past four decades and demonstrates how Putnam arrived at the different positions he has occupied during his career and discusses the various forms of anti realist doctrine with which he has engaged The work offers commentary on Putnam's writing about conceptual problems in the interpretation of quantum mechanics and places Putnam's work in a wider philosophical context relating it to various contemporary debates in epistemology and the philosophy of science

Reality and Self-Realization MinGyu Seo, 2014-03-21 Since the publication of Roy Bhaskar's A Realist Theory of Science in 1975 critical realism has been evolved as one of the new developments in the areas of philosophy of natural and social science which offers an alternatively fresh view to the existing theories including positivism and post modernism Bhaskar's intellectual movement which is now fully international and multi disciplinary and continues to influence the philosophies of natural and social science has transformed into Dialectical Critical Realism hereafter DCR and the philosophy of meta Reality MinGyu will conclude that his anti anthropic Non duality continues through all the steps of Bhaskar's thought maintaining the consistency of his scientific metaphysical and spiritual journey The anti anthropic motif is fully realized in the philosophy of Non duality the constellational identification of dualism duality and non duality in his meta Reality Defending Bhaskar against Collier Agar and Morgan MinGyu tries to show how its anti anthropic and non dualistic

foundation is sustained through the whole of Bhaskar's journey involving a transformation of its subject matters from reality to the dialectic of reality to the real truth underlying the former stages This book provides an indispensable resource for all students of philosophy and the human sciences

Deconstruction and the 'Unfinished Project of Modernity' Christopher Norris, 2020-11-25 Through a close engagement with some key thinkers Norris argues that deconstruction is part of the unfinished project of modernity a project whose interest and values it upholds by continuing to question them in a spirit of enlightened self-critical inquiry

After Postmodernism Jose Lopez, Garry Potter, 2005-03-01 What comes after postmodernism A buzzword which began as an energising radical critique became by the 20th Century's end a byword for fracture eclecticism political apathy and intellectual exhaustion The last few years have seen a growing interest in critical realism as a possible alternative way of moving forward The virtues of critical realism lie in its successful provision of a philosophical grounding for the social sciences and humanities and of a methodology applicable to many different fields of analysis After Postmodernism brings together some of the best-known names in the field to present the first truly interdisciplinary introduction to critical realism The book presents the reader with a compendium of accessible essays illustrating the connection between meta-theory theory and substantive research across Sociology Philosophy Literary Studies Politics Media Studies Psychology and Science Studies The flexibility of critical realism is illustrated in the range of topics discussed ranging from quantum mechanics to cyberspace to literary theory nature smoking the future for Marx the unconscious and of course postmodernism and the future of theory itself Contributors Allison Assiter Ted Benton Francis Barker Roy Bhaskar Jean Bricmont Sue Clegg Andrew Collier Justin Cruickshank Robert Fine David Ford Tim Forsyth Rom Harré Pam Higham Philip Hodgkiss Jose Lopez Christopher Norris Bertell Ollman Jenneth Parker Frank Pearce Douglas V Porpora Garry Potter John Scott Philip Tew Charles R Varela Anthony Woodiwiss

Nature and Sociology Tim Newton, 2007-08-07 This book engages with and contests the new sociology of nature It moves beyond existing debates by presenting new social theory and working across current fields of interest addressing the debate on new genetics and

genomics taking human biology seriously and the issues of interdisciplinarity that are likely to arise in longer term attempts to work across the social and natural world Nature and Sociology will be of great interest to students of a variety of disciplines including sociology and social science human geography social and biological anthropology and the natural sciences

Sociology as a Human Science Isaac Ariail Reed, 2023-04-25 Sociology as a Human Science is a set of foundational wide ranging and updated essays from Isaac Ariail Reed Gathered together for the first time with a new introduction they articulate a distinct perspective on concept and method in social science Reed writes about realism and positivism postmodernism and empiricism mechanisms and causality and power and history developing thereby an understanding of the key debates out of which 21st century sociology has developed Carefully considering all manner of arguments in metatheory and epistemology and moving towards a program of interpretive explanation focused on culture and power Reed places sociology at the center of debates about knowledge production across the humanities and social sciences His reconstructive approach positioned after the posts poststructuralism postmodernism and postcolonialism provides a way for interpretive sociology to provide analytically sound theoretically extensive and empirically rich understandings of social life

Evaluating Progress in International Relations Annette Freyberg-Inan, Ewan Harrison, Patrick James, 2016-10-04 This edited volume offers a systematic evaluation of how knowledge is produced by scholarly research into International Relations The contributors explore three key questions To what extent is scientific progress and accumulation of knowledge possible What are the different accounts of how this process takes place And what are the dominant critiques of these understandings It is the first publication to survey the full range of perspectives available for evaluating scientific progress as well as dominant critiques of scientism In its second part the volume applies this range of perspectives to the research program on the democratic peace It shows what we gain by accommodating and enabling dialogue among the full range of epistemological approaches The contributors elaborate and defend the epistemological position of sociable pluralism as one that seeks to build bridges between soft positivism critical theory and critical realism The underlying idea is that if the differences between the various approaches used by different communities of researchers can be understood more clearly this will facilitate meaningful cross cutting communication dialogue and debate and thereby enable us to address real world problems more effectively This timely and original work will be of great interest to advanced level students and scholars dealing with philosophy of science and methodological questions in International Relations

Digital Library Use Ann Peterson-Kemp, Nancy A. Van House, Barbara P. Battenfield, 2003-10-10 Viewing digital libraries as sociotechnical systems networks of people and technology interacting with society The contributors to this volume view digital libraries DLs from a social as well as technological perspective They see DLs as sociotechnical systems networks of technology information artifacts and people and practices interacting with the larger world of work and society As Bruce Schatz observes in his foreword for a digital library to be useful the users the documents and the information system must be

in harmony The contributors begin by asking how we evaluate DLs how we can understand them in order to build better DLs but they move beyond these basic concerns to explore how DLs make a difference in people s lives and their social worlds and what studying DLs might tell us about information knowledge and social and cognitive processes The chapters using both empirical and analytical methods examine the social impact of DLs and also the web of social and material relations in which DLs are embedded these far ranging social worlds include such disparate groups as community activists environmental researchers middle school children and computer system designers Topics Documents and society the real boundaries of a library without walls the ecologies of digital libraries usability and evaluation information and institutional change transparency as a product of the convergence of social practices and information artifacts and collaborative knowledge construction in digital libraries

Metamodernism Jason Ananda Josephson Storm,2021-06-07 Not only an astute diagnosis of the confusions and contradictions of contemporary thought it also offers compelling alternatives Rita Felski author of *Hooked Art and Attachment* For decades scholars have been calling into question the universality of disciplinary objects and categories The coherence of defined autonomous categories such as religion science and art has collapsed under the weight of postmodern critiques calling into question the possibility of progress and even the value of knowledge Jason nanda Josephson Storm aims to radicalize and move beyond these deconstructive projects to offer a path forward for the humanities and social sciences using a new model for theory he calls metamodernism Metamodernism works through the postmodern critiques and uncovers the mechanisms that produce and maintain concepts and social categories In so doing Storm provides a new radical account of society s ever changing nature what he calls a Process Social Ontology and its materialization in temporary zones of stability or social kinds Storm then formulates a fresh approach to philosophy of language by looking beyond the typical theorizing that focuses solely on human language production showing us instead how our own sign making is actually on a continuum with animal and plant communication Storm also considers fundamental issues of the relationship between knowledge and value promoting a turn toward humble emancipatory knowledge that recognizes the existence of multiple modes of the real Metamodernism is a revolutionary manifesto for research in the human sciences that offers a new way through postmodern skepticism to envision a more inclusive future of theory in which new forms of both progress and knowledge can be realized

Scientific Models in Philosophy of Science Daniela M. Bailer-Jones,2009-09-13 Scientists have used models for hundreds of years as a means of describing phenomena and as a basis for further analogy In *Scientific Models in Philosophy of Science* Daniela Bailer Jones assembles an original and comprehensive philosophical analysis of how models have been used and interpreted in both

historical and contemporary contexts Bailer Jones delineates the many forms models can take ranging from equations to animals from physical objects to theoretical constructs and how they are put to use She examines early mechanical models employed by nineteenth century physicists such as Kelvin and Maxwell describes their roots in the mathematical principles of Newton and others and compares them to contemporary mechanistic approaches Bailer Jones then views the use of analogy in the late nineteenth century as a means of understanding models and to link different branches of science She reveals how analogies can also be models themselves or can help to create them The first half of the twentieth century saw little mention of models in the literature of logical empiricism Focusing primarily on theory logical empiricists believed that models were of temporary importance flawed and awaiting correction The later contesting of logical empiricism particularly the hypothetico deductive account of theories by philosophers such as Mary Hesse sparked a renewed interest in the importance of models during the 1950s that continues to this day Bailer Jones analyzes subsequent propositions of models as metaphors Kuhn s concept of a paradigm the Semantic View of theories and the case study approaches of Cartwright and Morrison among others She then engages current debates on topics such as phenomena versus data the distinctions between models and theories the concepts of representation and realism and the discerning of falsities in models
