Pomerans Rene Taton, 1962 The Accidental Scientist Graeme Donald, 2013-10-30 The Accidental Scientist explores the role of chance and error in scientific medical and commercial innovation outlining exactly how some of the most well known products gadgets and useful gizmos came to be **Causation in Science and the Methods of Scientific** Discovery Rani Lill Anjum, 2018 Causal questions are relevant to all sciences and social sciences yet how we discover causal connections is no easy matter Indeed the choice of methods concerns the correct norms for the empirical study of the world In this text two experts on causation relate philosophical theory to scientific practice and propose nine new norms of Realism and the Aim of Science Karl Popper, 2013-04-15 Realism and the Aim of Science is one of the three volumes of Karl Popper's Postscript to the Logic of scientific Discovery The Postscript is the culmination of Popper's work in the philosophy of physics and a new famous attack on subjectivist approaches to philosophy of science Realism and the Aim of Science is the first volume of the Postcript Popper here formulates and explains his non justificationist theory of knowledge science aims at true explanatory theories yet it can never prove or justify any theory to be true not even if is a true theory Science must continue to guestion and criticise all its theories even those that happen to be true Realism and the Aim of Science presents Popper's mature statement on scientific knowledge and offers important insights into his thinking on Chance Discoveries in Real World Decision Making Yukio Ohsawa, 2006-09-06 For this problems of method within science book the editors invited and called for contributions from indispensable research areas relevant to chance discovery which has been defined as the discovery of events significant for making a decision and studied since 2000 From respective research areas as artificial intelligence mathematics cognitive science medical science risk management methodologies for design and communication the invited and selected authors in this book present their particular approaches to chance discovery The chapters here show contributions to identifying rare or hidden events and explaining their significance predicting future trends communications for scenario development in marketing and design identification effects and side effects of medicines etc The methods presented in this book are based on the interaction of human machine and human s living environment rather than based purely automated predictions of the future This is a promising direction of computer supported decision of human in a radically changing environment Chase, Chance, and Creativity James H. Austin, 2003-08-15 A personal story of the ways in which persistence chance and creativity interact in biomedical research This first book by the author of Zen and the Brain examines the role of chance in the creative process James Austin tells a personal story of the ways in which persistence chance and creativity interact in biomedical research the conclusions he reaches shed light on the creative process in any field Austin shows how in his own investigations unpredictable events shaped the outcome of his research and brought about novel results He then goes beyond this story of serendipity to propose

a new classification of the varieties of chance drawing on his own research and examples from the history of science including the famous accidents that led Fleming to the discovery of penicillin Finally he explores the nature of the creative process considering not only the environmental and neurophysiological correlates of creativity but also the role of intuition in both scientific discoveries and spiritual quests This updated MIT Press paperback edition includes a new introduction and recent material on medical research creativity and spirituality **Theory of Scientific Method** William Whewell, 1989-01-01 Includes the author's seminal studies of the logic of induction arguments for his realist view that science discovers necessary truths about nature and exercises in the epistemology and ontology of science **Reasoning in Scientific Discovery** L. Magnani, N.J. Nersessian, Paul Thagard, 2012-12-06 The volume is based on the papers that were presented at the Interna tional Conference Model Based Reasoning in Scientific Discovery MBR 98 held at the Collegio Ghislieri University of Pavia Pavia Italy in December 1998 The papers explore how scientific thinking uses models and explanatory reasoning to produce creative changes in theories and concepts The study of diagnostic visual spatial analogical and temporal rea soning has demonstrated that there are many ways of performing intelligent and creative reasoning that cannot be described with the help only of traditional notions of reasoning such as classical logic Traditional accounts of scientific reasoning have restricted the notion of reasoning primarily to de ductive and inductive arguments Understanding the contribution of model ing practices to discovery and conceptual change in science requires ex panding scientific reasoning to include complex forms of creative reasoning that are not always successful and can lead to incorrect solutions The study of these heuristic ways of reasoning is situated at the crossroads of philoso phy artificial intelligence cognitive psychology and logic that is at the heart of cognitive science There are several key ingredients common to the various forms of model based reasoning to be considered in this book. The models are intended as in terpretations of target physical systems processes phenomena or situations The models are retrieved or constructed on the basis of potentially satisfying salient constraints of the target domain Scientists as Writers James Harrison, 2014-05-09 In the endless debate about the Two Cultures no book until this attempted to provide a selection of scientific writing on specific themes to stimulate students of arts subjects into discussion and writing about the nature of science and its relationship with the rest of life This book is based on a selection of prose passages written by scientists about science supplemented by notes and a brief linking commentary Originally published in 1965 the passages were chosen to illustrate or comment on different aspects of eleven main themes ranging from surveys of changing ideas on the nature of the universe and the material of which it was made to evolution past and future and the relation of science with religion and art Most of the extracts were from contemporary authors but there are passages by Aristotle Bacon Boyle Hooke Newton Dalton Faraday and Darwin At the end of the book there are suggestions for discussion to accompany each chapter to encourage the study of the use of language in consideration of the nature history and role of science Science and Its History Joseph Agassi, 2008-09-16 Professor

is reaping diminishing returns while societies around the world are paying the price In the skeptical spirit of true science Sheldrake turns the ten fundamental dogmas of materialism into exciting questions and shows how all of them open up startling new possibilities for discovery Science Set Free will radically change your view of what is real and what is possible

Methods and Trchniques in Business Research, The Semantic Conception of Theories and Scientific Realism Frederick Suppe,1989 An authoritative account of the semantic conception of theories by one of its chief developers Suppe has always seen the semantic conception as providing a way of moving beyond empiricist philosophies of science This book provides the definitive account of his views not only on the issue of realism but also on a variety of other issues central to the philosophy of science Ronald N Giere author of Explaining Science A Cognitive Approach
