Allison,2010-09-02 Henry Allison examines the central tenets of Hume s

epistemology and cognitive psychology as contained in the Treatise of Human Nature Allison takes a distinctive two level approach On the one hand he considers Hume s thought in its own terms and historical context So considered Hume is viewed as a naturalist whose project in the first three parts of the first book of the Treatise is to provide an account of the operation of the understanding in which reason is subordinated to custom and other non rational propensities Scepticism arises in the fourth part as a form of metascepticism directed not against first order beliefs but against philosophical attempts to ground these beliefs in the space of reasons On the other hand Allison provides a critique of these tenets from a Kantian perspective This involves a comparison of the two thinkers on a range of issues including space and time causation existence induction and the self In each case the issue is seen to turn on a contrast between their underlying models of cognition Hume is committed to a version of the perceptual model according to which the paradigm of knowledge is a seeing with the mind s eye of the relation between mental contents By contrast Kant appeals to a discursive model in which the fundamental cognitive act is judgment understood as the application of concepts to sensory data Whereas regarded from the first point of view Hume s account is deemed a major philosophical achievement seen from the second it suffers from a failure to develop an adequate account of concepts and judgment
