More than 70% of those deaths occurred in low and middle income countries. WHO has developed a series of six modules that provides practical advice for programme managers and policy makers on how to advocate, plan and implement effective cancer control programmes particularly in low and middle income countries. The WHO guide is a response to the World Health Assembly resolution on cancer prevention and control WHA58.22 adopted in May 2005 which calls on Member States to intensify action against cancer by developing and reinforcing cancer control programmes. Cancer Control Opportunities in Low- and Middle-Income Countries Institute of Medicine, Board on Global Health, Committee on Cancer Control in Low- and Middle-Income Countries, 2007-01-26. Cancer is low or absent on the health agendas of low and middle income countries. LMCs despite the fact that more people die from cancer in these countries than from AIDS and malaria combined. International health organizations, bilateral aid agencies and major foundations which are instrumental in setting health priorities also have largely ignored cancer in these countries. This book identifies feasible, affordable steps for LMCs and their international partners to begin to reduce the cancer burden for current and future generations. Stemming the growth of cigarette smoking tops the list to prevent cancer and all the other major chronic diseases. Other priorities include infant vaccination against the hepatitis B virus to prevent liver cancers and vaccination to prevent cervical cancer. Developing and increasing capacity for cancer screening and treatment of highly curable cancers including most childhood malignancies can be accomplished using resource level appropriateness as a guide. And there are ways to make inexpensive oral morphine available to ease the pain of the many who will still die from cancer.
