Pham, Lance A. Williams III, 2017-09-15 Transfusion Medicine Apheresis and Hemostasis Review Questions and Case Studies is the collaborative effort that spanned a time period of 2 years and included 50 experts many

whom are national leaders in their respected fields It also represents the passion and privilege we feel to teach the next generation of physicians in Transfusion Medicine and Apheresis The main goal for this book is to help the readers build a solid foundation of both basic and advanced conceptual knowledge to prepare for the American Board of Pathology ABP certification exam in Transfusion Medicine This book is not intended to be a substitute for textbooks original research or review articles and or clinical training Further since the field of medicine both from a scientific and regulatory perspective rapidly changes the readers are advised to continuously update their knowledge by attending national meetings and reading clinical journals To equip the readers with the basic knowledge in critical reading and data analysis which is an essential skill in daily medical practice a novel chapter titled Data Interpretation in Laboratory Medicine was included in this book In this chapter the readers are asked to make logical conclusions based on the given data and or statistical results Moreover there is also a chapter on Practical Calculations in Transfusion Medicine Apheresis and Hemostasis to help consolidate all the necessary formulas commonly used in daily practice for easy reference These chapters are unique to our book and will not be found in any other currently on the market All of the questions in this book were originally created by the authors of each chapter Each question can either be standalone or part of a case scenario representing challenge cases in Transfusion Medicine Apheresis and Hemostasis These questions often represent both rare and common clinical scenarios that the authors have seen during their clinical practice Each question is then followed by 5 possible answers with only one being correct or the best answer After the question there is a conceptual explanation followed by a more factual explanation of the right and wrong answers We gave the individual authors the freedom to choose how they explained the wrong answer choices Some authors chose to be more direct e g Answer A is incorrect because while other authors chose a more conversational style e g Human resources answer A includes staffing selection orientation training and competency assessment of employees This format is designed to help the student linking the conceptual and factual knowledge together to form a solid foundation for use in clinical practice At the end of each chapter there is a list of articles and textbooks that will prove useful to the motivated student who wishes to become an expert in the field Another special feature to our textbook is the presence of a pre test and post test which are provided to help the readers with self assessment As stated above the main focus of this book is to help the readers preparing for the ABP certification exam in Transfusion Medicine However due to the interdisciplinary nature of the field of Transfusion Medicine Apheresis and Hemostasis we believe that this book is also beneficial to and can be used by all clinicians involved in the management of complex transfusion apheresis and hemostasis issues such as hematologists anesthesiologists surgeons and critical care physicians We further believe that it is a helpful guide for these specialists to prepare for their own specialty certification exam when the topics are related to Transfusion Medicine Apheresis and Hemostasis

Baum,D.H. Pluznik,L.A. Rosenszajn,Ramat-Gan,2012-12-06 Experimental Hematology Today 1985 is a memento to the superb 14th Annual Meeting

of the International Society for Experimental Hematology held in Jerusalem Israel in July 1985. It represents a selection of the best presentations at the meeting. The manuscripts were selected by the local scientific committee and carefully reviewed by the editors. The yearbook is divided into five parts and represents the most recent advances in the basic sciences and clinical applications. Part I, under the leadership of Dr L. A. Rozenszajn, is entitled Hematopoietic Regulators. Papers in this section discuss the most recent discoveries on the physiological regulation of hematopoiesis. Part II, Hematopoietic Microenvironment, introduced by Dr J. S. Greenberger, deals with the involvement of the hematopoietic microenvironment in the control of hematopoiesis. Dr M. Saito leads Part III, Differentiation of Normal and Leukemic Cells, while Part IV, Leukemic Cells in Leukemogenesis, is introduced by Dr A. Raghavacher. The important discussions on recent advances in Bone Marrow Transplantation, Part V, are headed by Dr M. M. Bortin. Recent findings in many disciplines in experimental and clinical hematology are presented in this yearbook. It should be of considerable value to experimental and clinical scientists.

Recent Advances in iPSC Disease Modeling Alexander Birbrair, 2020-07-16

Recent Advances in iPSC Disease Modeling Volume One addresses how induced pluripotent stem cells can be used to model various diseases. This new volume teaches readers about current advances in the field, describing the use of induced pluripotent stem cells to model several diseases in vitro and thus enabling us to study the cellular and molecular mechanisms involved in different pathologies. Further insights into these mechanisms will have important implications for our understanding of disease appearance, development, and progression. The volume is written for researchers and scientists in stem cell therapy, cell biology, regenerative medicine, and organ transplantation specialists. In recent years, remarkable progress has been made in the obtention of induced pluripotent stem cells and their differentiation into several cell types, tissues, and organs using state-of-the-art techniques. Hence, these advantages have facilitated the identification of key targets and further defining, on the molecular basis, of several disorders. Provides an overview on the fast-moving field of induced pluripotent stem cell technology, regenerative medicine, and therapeutics. Covers the following diseases: severe congenital neutropenia, sickle cell, and Diamond-Blackfan anemias, muscular dystrophies, Bernard-Soulier syndrome, familial hypercholesterolemia, type II A, Werner syndrome, lysosomal storage diseases, and more. Contains descriptions of cutting-edge research on the development of disease-specific human pluripotent stem cells.
