*Recent Advances in Cannabinoid Research* Willard James Costain,Robert Brad Laprairie,2019-05-10 Scientific interest in cannabinoid research is currently experiencing a significant increase because of changing attitudes toward Cannabis and the evolving awareness of its pharmaceutical benefits Coincidentally numerous jurisdictions are moving toward legalizing Cannabis and Cannabis derived products which reflects a larger global movement to understand Cannabis and its bioactive chemicals for their potential biomedical uses harms and economic value Research activities are surging to fill important knowledge gaps in the field of cannabinoids as they continue to be identified The purpose of this book is to summarize some leading areas of research in the cannabinoid field where knowledge gaps are actively being addressed The research described herein spans basic biological and clinical research

**Neuroprogression in Psychiatry** Flávio Kapczinski,Michael Berk,Pedro Vieira da Silva Magalhães,2019-03-05 Recent studies regarding the neuropathology of specific neurological disorders suggest that both neurodevelopmental and neurodegenerative processes may play a role However in contrast to the neurodegeneration seen in neurological disorders such as Parkinson s and Alzheimer s disease the term neuroprogression has been used to describe the neurodevelopmental aspect of pathological brain re wiring that takes place in the context of severe psychiatric disorders such as schizophrenia or bipolar disorder Within psychiatry patients

with severe psychopathology such as those depressed patients who eventually commit suicide have been shown to present with increased inflammatory markers in the brain. A similar increase in inflammatory markers is also found in patients with bipolar disorders and schizophrenia. Thus oxidative stress, inflammation, and changes in growth factors are thought to be the pathways of neuroprogression. Neuroprogression in Psychiatry provides a comprehensive summary of the current developments in the emerging field of neuroprogression. With contributions by leading researchers in the field, this book examines the role of neuroprogression across a wide range of specific psychiatric disorders, with chapters included on major depressive disorder, anxiety disorder, post-traumatic stress disorder, substance abuse, schizophrenia, and bipolar disorder.

The Neurobiology of Addiction Trevor W. Robbins, Barry J. Everitt, David J. Nutt, 2010. In the past two decades there have been astonishing advances in our understanding of the neurobiological basis and nature of drug addiction. We now know the initial molecular sites of action at identified receptors of virtually all of the major drugs of abuse, including cocaine, heroin, and amphetamine, as well as legal drugs such as nicotine and alcohol. We also understand the main components of a reward system and its connections to major brain regions involved in motivation and emotion, such as the amygdala, hippocampus, and prefrontal cortex. The Neurobiology of Addiction describes the latest advances in our understanding of addiction. It brings together world-class researchers to debate the nature and extent of addiction, as well as its causes, consequences, and treatment. The focus of the book is on the brain processes underlying addiction in terms of neural systems, neurochemical basis, and molecular changes. Several types of addiction are discussed, ranging from illicit drugs (cocaine, amphetamine, and heroin) to legal drugs (alcohol and nicotine). In addition, it explores increasingly common behavioural addictions such as gambling and obesity. Included are chapters on vulnerability to addiction, genetic factors, opponent motivational processes, animal models, relapse, cognitive deficits associated with drug abuse, new pharmacological treatments, and current controversies concerning different neuropsychological theories of addiction. Throughout, it reports on cutting-edge research using brain imaging and state-of-the-art molecular methodology. The book will make fascinating reading for students and teachers in the field of neuroscience, pharmacology, and psychology, as well as experts in the field.

Creating Modern Neuroscience: The Revolutionary 1950s Gordon M. Shepherd MD, DPhil, 2009-10-28. For modern scientists, history often starts with last week's journals and is regarded as largely a quaint interest compared with the advances of today. However, this book makes the case that, measured by major advances, the greatest decade in the history of brain studies was mid-twentieth century, especially the 1950s. The first to focus on worldwide contributions in this period, the book ranges through dozens of astonishing discoveries at all levels of the brain, from DNA (Watson and Crick) through growth factors (Hamburger) and Levi Montalcini, excitability (Hodgkin and Huxley), synapses (Katz and Eccles), dopamine and Parkinson's (Carlsson), visual processing (Hartline and Kuffler), the cortical column (Mountcastle), reticular activating system (Moruzzi and Magoun), and REM sleep (Aserinsky) to stress (Selye), learning (Hebb), and memory (HM and Milner). The clinical fields are also covered, from Cushing

and Penfield psychosurgery and brain energy metabolism Kety to most of the major psychoactive drugs in use today beginning with Delay and Deniker and much more The material has been the basis for a highly successful advanced undergraduate and graduate course at Yale with the classic papers organized and accessible on the web There is interest for a wide range of readers academic and lay because there is a focus on the creative process itself on understanding how the combination of unique personalities innovative hypotheses and new methods led to the advances Insight is given into this process through describing the struggles between male and female student and mentor academic and private sector and the roles of chance and persistence The book thus provides a new multidisciplinary understanding of the revolution that created the modern field of neuroscience and set the bar for judging current and future advances **Beyond Assessment of**

**Quality of Life in Schizophrenia** A. George Awad,Lakshmi N.P. Voruganti,2016-06-14 This book fills a significant research gap in how to integrate quality of life data into relevant clinical care plans and to broaden its applicability to

pharmacoeconomic studies of antipsychotic medications and health policy decision making It also presents an argument for reformulating the concept of health related quality of life in schizophrenia as a bio psycho social construct which provides an opportunity to better explore the many factors underpinning the concept itself Internationally renowned experts from different scientific backgrounds and scopes of expertise each make arguments for the need to invigorate quality of life as a concept in schizophrenia by broadening its usefulness for clinical and research efforts The book represents an important addition to the extensive contributions of its editors Dr A George Awad and Dr Lakshmi N P Voruganti to the field of quality of life **Horizons in Neuropsychopharmacology** ,1965-01-01 Horizons in Neuropsychopharmacology **Recent**
