Steel - A New and Traditional Material for Building Dan Dubina,Viorel Ungureanu,2006-08-17 In an era of new composite materials and high strength concrete and with an increasing demand for sustainable building technologies the importance of the role of steel in construction is being challenged Nonetheless steel can successfully be used to refurbish and retrofit historical buildings as well as being a material of choice for new building structures Steel can effectively be combined with a variety of other materials to obtain structures which are characterized by a high performance response under different types of static and dynamic activity The proceedings contains nine keynote lectures from international experts and is further divided into five sections calculation models and methods studies and advances in design codes steel and mixed building technology steel under exceptional actions and steel in remarkable constructions and refurbishment Thin-Walled Composite Beams Liviu Librescu,Ohseop Song,2006-01-15 Annotation This is the first monograph devoted to the foundation of the theory of composite anisotropic thin walled beams and to its applications in various problems involving the aeronautical aerospace helicopter naval and mechanical structures Throughout the theoretical part an effort was made to provide the treatment of the subject by using the equations of the 3 D elasticity theory Non classical effects such as transverse shear warping constraint anisotropy of constituent materials yielding the coupling of twist bending lateral bending transversal extension have been included and their implications have been thoroughly analyzed Thermal effects have been included and in order to be able to circumvent their deleterious effects functionally graded materials have been considered in their construction Implications of the application of the tailoring technique and of the active feedback control on free vibration dynamic response instability and aeroelasticity of such structures have been amply investigated Special care was exercised throughout this work to address and validate the adopted solution methodologies and the obtained results against those available in the literature and obtained via numerical or experimental means **Proceedings of the ASME International Design Engineering Technical Conferences and Computers and Information in Engineering Conferences--2005** ,2005 Recent Advances on Green Concrete for Structural Purposes Joaquim A.O. Barros,Liberato Ferrara,Enzo Martinelli,2017-05-29 This book is mainly based on the results of the EU funded UE FP7 Project EnCoRe which aimed to characterize the key physical and mechanical properties of a novel class of advanced cement based materials incorporating recycled powders and aggregates and or natural ingredients in order to allow partial or even total replacement of conventional constituents More specifically the project objectives were to predict the physical and mechanical performance of concrete with recycled aggregates to understand the potential contribution of recycled fibers as a dispersed reinforcement in concrete matrices and to demonstrate the feasibility and possible applications of natural fibers as a

reinforcement in cementitious composites All of these aspects are fully covered in the book The opening chapters explain the material concept and design and discuss the experimental characterization of the physical chemical and mechanical properties of the recycled raw constituents as well as of the cementitious composite incorporating them The numerical models with potentialities for describing the behavior at material and structural level of constructions systems made by these composites are presented Finally engineering applications and guidelines for production and design are proposed
