Miniaturization and Mass Spectrometry Severine le Gac,Albert van den Berg,2008-12-03 The recent explosion in the use of analytical chemistry particularly in the biological sciences has led to a need for fast reliable and highly sensitive tools able to handle small sample sizes This book illustrates how microfluidics and lab on a chip devices can satisfy the growing need for miniaturized and enhanced analysis They lend themselves well to mass spectrometric detection as they use samples in the low microlitre range and are handled on a chip Miniaturization and Mass Spectrometry focuses on one particular technique mass spectrometry whose popularity has increased dramatically in the last two decades with the increase in use of biological analysis and the development of two soft ionization techniques ESI and MALDI These enable the analysis of large but fragile biological molecules such as DNA proteins and oligosaccharides The book starts with an introduction to the coupling of microfluidics to mass spectrometry techniques It then goes on demonstrate the advantages of such a coupling the MS analysis benefits from improved sample preparation when performed on a chip while MS yields more information on the sample handled on the chip compared to conventional optical detection A history on the developments in this field starting

from the off chip coupling to the on chip ionization is also provided Daniel Figeys a pioneer in the development of microfluidic systems for MS analysis describes the early beginnings of this hyphenated analysis technique Solutions to couple microfluidic systems to the two most popular ionization methods ESI and MALDI are presented throughout the chapters Various examples are given of the application of this microfluidics MS hyphenated analysis technique to proteomics metabolomics organic chemistry and forensics Coverage is not limited to academic research The development of commercialized systems and their current use for routine biological analysis are also presented Lastly a future vision of the integration of the mass spectrometer on the chip is raised as a last step to yield fully portable systems for on site analysis

Recent Developments in Mass Spectrometry in Biochemistry and Medicine, 6 Alberto Frigerio, 1980

Tandem Mass Spectrometry of Lipids Robert C Murphy, 2014-12-02 The emerging field of lipidomics has been made possible because of advances in mass spectrometry and in particular tandem mass spectrometry of lipid ions generated by electrospray ionization The ability to carry out basic biochemical studies of lipids using electrospray ionization is predicated upon understanding the behaviour of lipid derived ions following collision induced decomposition and mechanisms of product ion formation During the past 20 years a wealth of information has been generated about lipid molecules that are now analysed by mass spectrometry however there is no central source where one can obtain basic information about how these very diverse biomolecules behave following collisional activation This book brings together in one volume this information so that investigators considering using tandem mass spectrometry to structurally characterize lipids or to quantitate their occurrence in a biological matrix will have a convenient source to review mechanism of decomposition reactions related to the diversity of lipid structures A separate chapter is devoted to each of seven major lipid classes including fatty acids eicosanoids and bioactive lipid mediators fatty acyl esters and amides glycerol esters glycerophospholipids sphingolipids and steroids Mechanistic details are provided for understanding the pathways of formation of major product ions and ions used for structural characterization

In most cases specific ancillary information has been critical to understand the pathways including isotope labeling and high resolution analysis of precursor and product ions For a few specific examples such data is missing and pathways are proposed as a means to initiate further mass spectral experiments to prove or disprove pathway hypotheses While this work largely centres on the lipid biochemistry of animal mammalian systems general principles can be taken from the specific examples and applied to lipid biochemistry found in plants fungi prokaryotes and archeal organisms *Advances in*
