Metal Recovery from Industrial Waste Clyde S. Brooks, 2018-01-18 This book is offered as a practical primer on the hydrometallurgy of nonferrous metal reclamation from industrial wastes as well as a brief discussion of pyrometallurgy biological and other separation processes. The objectives are to acquaint nontechnical readers with the subject as well as providing a detailed survey of current research and industrial practice to technical readers concerned with the management of industrial waste.

Ion Exchange and Solvent Extraction Bruce A. Moyer, 2009-08-19 The growth in the world's nuclear industry motivated by peaking world oil supplies concerns about the greenhouse effect and domestic needs for energy independence has resulted in a heightened focus on the need for next generation nuclear fuel cycle technologies.

Ion Exchange and Solvent Extraction A Series of Advances Volume 19 provides a comprehensive survey of the separation of molecules, macromolecules and particles. Kamallesh K. Sirkar, 2014-01-16 Providing chemical engineering undergraduate and graduate students with a basic understanding of how separation of a mixture of molecules, macromolecules or particles is achieved, this textbook is a comprehensive introduction to the engineering science of separation. Students learn how to apply their knowledge to determine the separation achieved in a given device or process. Real world examples are taken from biotechnology, chemical, food, petrochemical, pharmaceutical and pollution control industries. Worked examples, elementary separator designs and chapter end problems are provided, giving students a practical understanding of separation. The textbook systematically develops different separation processes by considering the forces causing the separation and how this separation is influenced by the patterns of bulk flow in the separation device. Readers will be able to take this knowledge and apply it to their own future studies and research in separation and purification. Online resources include solutions to the exercises and guidance for computer simulations.

Liquid Membranes Takeo Araki, Hiroshi Tsukube, 2024-12-06 This interesting work extensively describes newer applications of liquid membrane systems which contain molecular and/or ion recognizing carrier compounds and the related characteristic membrane materials. This volume focuses on the current knowledge about chemistry, biology and related technology of liquid membranes. It reviews the most recent advances in design and characteristics of synthetic liquid membrane transport. Additionally, this fascinating reference discusses up-to-date topics in the analytical and separation science plus biomimetic membrane technology. Because this book is presented in a compact, understandable format, readers can start from biological cell membranes, then move to aspects of host-guest chemistry for effective recognition of ions and molecules, followed by its application for artificial sensors such as neuro systems, functionalized new detergents, mechanochemical systems and separation chemistry. This publication is ideal for graduate level students and will stimulate university and industry researchers.
