Recent Revolutions In Geology:

The Revolution in Geology from the Renaissance to the Enlightenment Gary D. Rosenberg, 2009-01-01 **The Revolution in Geology from the Renaissance to the Enlightenment** Gary D. Rosenberg, 2009-01-01 **Bursting the Limits of Time** Martin J. S. Rudwick, 2008-11-15

In 1650 Archbishop James Ussher of Armagh joined the long running theological debate on the age of the earth by famously announcing that creation had occurred on October 23 4004 B C. Although widely challenged during the Enlightenment this belief in a six thousand year old planet was only laid to rest during a revolution of discovery in the late eighteenth and early nineteenth centuries. In this relatively brief period geologists reconstructed the immensely long history of the earth and the relatively recent arrival of human life. Highlighting a discovery that radically altered existing perceptions of a human's place in the universe as much as the theories of Copernicus, Darwin, and Freud did, *Bursting the Limits of Time* is a herculean effort by one of the world's foremost experts on the history of geology and paleontology to sketch this historicization of the natural world in the age of revolution. Addressing this intellectual revolution for the first time, Rudwick examines the ideas and practices of earth scientists throughout the Western world to show how the story of what we now call deep time was pieced together. He explores who was responsible for the discovery of the earth's history, refutes the concept of a rift between science and religion in dating the earth, and details how the study of the history of the earth helped define a new branch of science called geology. Rooting his analysis in a detailed study of primary sources, Rudwick emphasizes the lasting importance of field and museum based research of the eighteenth and nineteenth centuries. *Bursting the Limits of Time*, the culmination of more than three decades of research, is the first detailed account of this monumental phase in the history of science.

Four Revolutions in the Earth Sciences James Lawrence Powell, 2014-12-23

Over the course of the twentieth century, scientists came to accept four counterintuitive yet fundamental facts about the Earth: deep time, continental drift, meteorite impact, and global warming. When first suggested, each proposition violated scientific orthodoxy and was quickly denounced as scientific and sometimes religious heresy. Nevertheless, after decades of rejection, scientists came to accept each theory. The stories behind these four discoveries reflect more than the fascinating push and pull of scientific work. They reveal the provocative nature of science and how it raises profound and sometimes uncomfortable truths as it advances. For example, counter to common sense, the Earth and the solar system are older than all of human existence; the interactions among the moving plates and the continents they carry account for nearly all of the Earth's surface features; and nearly every important feature of our solar system results from the chance collision of objects in space. Most surprising of all, we humans have altered the climate of an entire planet and now threaten the future of civilization. This absorbing scientific history is the only book to describe the evolution of these four ideas from heresy to truth, showing how science works in practice and how it inevitably corrects the mistakes of its practitioners. Scientists can be wrong, but they do not stay wrong. In the process, astonishing ideas are born, tested, and over

time take root **Cataclysms** Michael R. Rampino, 2017-08-22 In 1980 the science world was stunned when a maverick team of researchers proposed that a massive meteor strike had wiped the dinosaurs and other fauna from the Earth 66 million years ago Scientists found evidence for this theory in a crater of doom on the Yucatán Peninsula showing that our planet had once been a target in a galactic shooting gallery In *Cataclysms* Michael R Rampino builds on the latest findings from leading geoscientists to take neocatastrophism a step further toward a richer understanding of the science behind major planetary upheavals and extinction events Rampino recounts his conversion to the impact hypothesis describing his visits to meteor strike sites and his review of the existing geological record The new geology he outlines explicitly rejects nineteenth century uniformitarianism which casts planetary change as gradual and driven by processes we can see at work today Rampino offers a cosmic context for Earth's geologic evolution in which cataclysms from above in the form of comet and asteroid impacts and from below in the form of huge outpourings of lava in flood basalt eruptions have led to severe and even catastrophic changes to the Earth's surface This new geology sees Earth's position in our solar system and galaxy as the keys to understanding our planet's geology and history of life Rampino concludes with a controversial consideration of dark matter's potential as a triggering mechanism exploring its role in heating Earth's core and spurring massive volcanism throughout geologic time **Revolutions that Made the Earth** Tim Lenton, Andrew Watson, 2013-04-11 The Earth that sustains us today was born out of a few remarkable near catastrophic revolutions started by biological innovations and marked by global environmental consequences The revolutions have certain features in common such as an increase in complexity energy utilization and information processing by life This book describes these revolutions showing the fundamental interdependence of the evolution of life and its non living environment We would not exist unless these upheavals had led eventually to successful outcomes meaning that after each one at length a new stable world emerged The current planet reshaping activities of our species may be the start of another great Earth system revolution but there is no guarantee that this one will be successful The book explains what a successful transition through it might look like if we are wise enough to steer such a course This book places humanity in context as part of the Earth system using a new scientific synthesis to illustrate our debt to the deep past and our potential for the future Recent Revolutions in Geology Lisa A. Rossbacher, 1986-01-01 Surveys recent theories and discoveries in geology including research into plate tectonics theories of mass extinctions and new perspectives on the earth caused by studying the geology of other planets **The History of the Study of Landforms Volume 2 (Routledge Revivals)** R. P. Beckinsale, Mrs R J M Chorley, R. J. Chorley, A J Dunn, A. J. Dunn, 2003-09-02 This volume is entirely devoted to the life and work of the world's most famous geomorphologist William Morris Davis 1850-1934 It contains a treatment in depth of Davis many contributions to the study of landforms including the cycle of erosion denudation chronology arid and karst geomorphology the coral reef problem *Drifting Continents and Shifting Theories* Homer Eugene LeGrand, 1988-12-15 A historical account of the triumph of the global theory of plate

tectonics and its implications for the modern revolution in geology of the 1960s and 1970s after fifty years of controversy and competition *An Introduction to Geology* Robert Bakewell, 1839 *Elements of Geology* William Samuel Waithman Ruschenberger, 1846 *Explaining Science* Ronald N. Giere, 2010-12-15 This volume presents an attempt to construct a unified cognitive theory of science in relatively short compass It confronts the strong program in sociology of science and the positions of various postpositivist philosophers of science developing significant alternatives to each in a readily comprehensible style It draws loosely on recent developments in cognitive science without burdening the argument with detailed results from that source The book is thus a provocative one Perhaps that is a measure of its value it will lead scholars and serious student from a number of science studies disciplines into continued and sharpened debate over fundamental questions Richard Burian *Isis* The writing is delightfully clear and accessible On balance few books advance our subject as well Paul Teller *Philosophy of Science* **Historical geology** Louis Valentine Pirsson, 1924 **The Web of Geological Sciences** Marion Eugene Bickford, 2013 This volume covers many of the important advances in the geological sciences from 1963 to 2013 These advances include understanding plate tectonics exploration of the Moon and Mars development of new computing and analytical technologies understanding of the role of microbiology in geologic processes and many others Provided by publisher **Problems of American Geology** William North Rice, Frank Dawson Adams, Arthur Philemon Coleman, Charles Doolittle Walcott, Waldemar Lindgren, Frederick Leslie Ransome, William Diller Matthew, 1915 **A Text-book of Geology: Historical geology** Louis Valentine Pirsson, Charles Schuchert, 1924

Thomas Kuhn's Revolutions James A. Marcum, 2015-10-22 This new edition of Thomas Kuhn's *Revolution* marks the 50th anniversary of the publication of Kuhn's most influential work Drawing on the rich archival sources at MIT and engaging fully with current scholarship James Marcum provides the historical background to the development of *The Structure of Scientific Revolutions* Exploring the shift Kuhn makes from a historical to an evolutionary philosophy of science and examining Kuhn's legacy in depth Marcum answers key questions What exactly was Kuhn's historiographic revolution and how did it come about Why did it have the impact it did What will its future impact be for both academia and society Marcum's answers build a new portrait of Kuhn his personality his pedagogical style and the intellectual and social context in which he practiced his trade Thomas Kuhn's *Revolution* shows how Kuhn transcends the boundaries of the philosophy of science influencing sociologists economists theologians and even policy makers and politicians This is a comprehensive historical and conceptual introduction to the man who changed our understanding of science **Text-book of Geology** Archibald Geikie, 1903 **A Text-book of Geology for Use in Universities** Louis Valentine Pirsson, Charles Schuchert, 1924 **Museum Revolutions** Simon Knell, Suzanne MacLeod, Sheila Watson, 2007-09-12 Capturing the richness of the museum studies discipline *Museum Revolutions* is the ideal text for museum studies courses providing a wide range of interlinked themes and the latest thought and research from experts in the field
